COMMENTS ON PREVIOUS EDITIONS

Litigation Support Managers

“This is amazing and I know it will become the “must have bible” for the industry.”

“This looks really useful – I have been under pressure to produce something along these lines myself.”

“This looks really interesting and useful… I do think it will be a very useful resource.”

“I like your initiative and is something which I know would be of industry wide interest….”

“I’ve printed the Guide out in A5 format and I carry it with me wherever I go, it’s so useful.”

Suppliers

“The more I have an opportunity to study your report – the more I am impressed with the breadth and depth of the content. Thanks again for sharing the report. This is an excellent tool I have already shared with the executive team at…..”

“Congratulations on compiling this. It looks like it was quite an undertaking – but the result is great document.”

“I have just got back from holiday and saw the publication – excellent work.”

“What Andrew has put together is nothing short of remarkable and IMO puts Gartner to shame.”

“I have to tell you that I’m deeply impressed by the Buyer’s Guide you have put together! I’m working now for about 7 years in the eDiscovery/Forensics field and I couldn’t agree more with what you have written. I will put your document on the mandatory reading list for our new joiners.”

“I joined the eDisclosure industry 3 months ago with no knowledge of the subject, your Buyer’s Guide has been the single most useful document I have found to educate myself. Thank you.”
FOREWORD (2020)

I write this as we enter our 5th week of UK lock-down in response to the COVID-19 virus. I had nearly completed the Buyer’s Guide and have taken the decision to press on with publication, with the caveat that some entries have been retained, even though I have not received updates from those organisations. I’ve made that clear in the data for the handful of companies that are affected, we will sort it all out in 2021.

Welcome to the eighth edition of the Buyer’s Guide to eDisclosure Systems. This year sees dramatic changes to the UK’s relationships with the rest of the world in general, and Europe in particular. It remains to be seen how this shift will impact the status of the UK in terms of its data protection regime and how that is viewed by the EU. Some suppliers have already set up additional processing centres inside the EU, readers should check out Chapter 8 for specifics if this topic is of interest to them.

The initial feedback on the Disclosure Pilot will have been released during the first part of 2020, anecdotal evidence to date would suggest that the focus on increased use of technology is having an impact and more law firms than ever are developing relationships with external suppliers and creating in-house eDisclosure roles. If you are thinking about going down that path, it is hoped this Guide will act as a roadmap of your options.

Foreword to Edition 7 (2019)

Welcome to the seventh edition of the Buyer’s Guide to eDisclosure Systems. By the time this document is published, we will be several months into the two year pilot of the changes to the Civil Procedure Rules for eDisclosure, with their emphasis on increased use of technology. It is hoped that this Guide will assist people in the assessment and selection of suitable technology, as the marketplace continues to consolidate, and also offers new entrants with associated newer functionality.

The eDisclosure Pilot has at its heart the Disclosure Review Document (DRD), which details the various steps and requirements users need to meet, including requiring parties to agree how they will transfer information between them in the disclosure process. During 2018/19, the author was part of a working group from the UK ILTA Special Interest Group for Litigation Support, that has produced a free to use “best practice” exchange protocol, along with accompanying guidelines. You can download the documents from the ILTA site here.

Foreword to Edition 6 (2018)

Welcome to the sixth edition of the Buyer’s Guide to eDisclosure Systems. 2018 starts with a pilot of proposed changes to the Civil Procedure Rules for eDisclosure. Those changes have an emphasis on the informed use of technology to support the collection, processing and review of electronic information. It is hoped this publication will assist practitioners in making those informed decisions.

The eDisclosure marketplace continues to consolidate as companies merge, and we are starting to see a slow but steady increase in the number of law firms investing in managed services partnerships with selected suppliers. If you are starting on that journey, or just “dipping your toes” into the world of eDisclosure, this Guide will help you along the way.

Foreword to Edition 5 (2017)

Welcome to the fifth edition of the Buyer’s Guide to eDisclosure Systems. 2016 saw continued change in both the UK eDisclosure and the wider world of eDiscovery. The composition of this edition is markedly different to the first volume produced back at the start of 2013.
Last year also saw many momentous changes outside of the insular world of eDisclosure suppliers, one of them being in the employment status of the Author. During 2016 Andrew hung up his consultancy boots, bought his own watch, and took on a permanent role as the UK eDisclosure Project Manager at Squire Patton Boggs LLP. Squire Patton Boggs have agreed that Andrew can continue to produce the Guide, with the clear understanding that it is a personal undertaking and is not endorsed by them in any way.

Foreword to Edition 4 (2016)

Welcome to edition 4 of the Buyer’s Guide to eDisclosure Systems, a document that gets bigger (and hopefully better) each year.

The 2015 theme for the UK eDisclosure marketplace has been one of consolidation, with a number of firms being acquired throughout the year, see inside for all the details of who is still around and what they are now called.

During 2015, Andrew was asked to participate in the development of an eDisclosure/Discovery competency standard for the LTC4 consortium, which was formally launched at this year’s LegalTech. You can find out more details about the LTC4 initiative and how you can use the standard here.

This version incorporates all the additional and modified vendor information that has been gathered over the past 12 months and welcomes 13 new suppliers to the fold, balanced by 11 who have left / been acquired as well as 2 name changes. We now have companies from 9 countries in the Guide.

Foreword to Edition 3 (2015)

Welcome to edition 3 of the Buyer's Guide to litigation support systems. The previous version was downloaded some 1,800 times over the year, hopefully this one will be as successful.

This version incorporates all the additional and modified vendor information that has been gathered over the past 12 months and welcomes 27 new suppliers to the fold.

Foreword to Edition 2 (2014)

The first edition of this "bible" was enthusiastically received around the litigation support community, with plaudits being offered from across the world. As a result of that document, in the first half of 2013, the Author was asked to join a working party tasked with providing a "Jackson Compliant" protocol for use within the Technology and Construction Court (TCC). The outputs from that effort can be found here.

As a by-product of the work done for the TCC protocol, the initial chapters to the Guide have been reworked to make them even more of an introduction to eDisclosure in general, and the requirements upon lawyers in particular. It is hoped they prove of use to readers.

1. EXECUTIVE SUMMARY

Welcome to the Andrew Haslam / Legal IT Insider buyer's guide to litigation support (or eDisclosure/Discovery) systems. As with previous editions, this version has been released in Spring to ensure that the latest information from the LegalTech exhibition in New York has been incorporated.

The target audience for the Guide are those individuals who understand they have a requirement, but do not know how to proceed with the next steps. It is assumed that people within organisations that have a litigation support function, will turn to them in the first instance for advice, but might use this document as a primer on what is available.

Possible readers of the Guide are end users of these systems, be they lawyers, barristers, in-house counsel, or IT departments. The Guide does not purport to identify the "best" software or supplier in the marketplace, but instead aims to supply information to allow users to arrive a shortlist of potential vendors, with a procurement exercise being the next logical step.

The Guide is based on Andrew Haslam's general experience in the marketplace, also drawing from a number of vendor procurement exercises. The information on firms and software tools has been provided by the organisations themselves, albeit moderated by the author.

The remainder of the Guide contains a background to the marketplace, looking in more detail at the scope of the document and potential users, and an overview of the EDRM model. A Chapter on the technology areas provides a more detailed examination of the processes that underpin the EDRM schematic, followed by an in-depth survey of the marketplace, the vendors, current issues and potential problems.

A procurement Chapter provides the "meat" of the document with example requirements for scanning, coding, data collection and litigation support services. There is a reference Chapter for additional links to other useful sites and then the specific details of suppliers and software.

Andrew is currently employed as the UK eDisclosure Project Manager for Squire Patton Boggs (UK) LLP, all opinion within the Guide is Andrew’s personal viewpoint and does not represent any views, opinions or strategies of Squire Patton Boggs.

</thead>
<tbody>
<tr>
<td>What is eDisclosure (and what is it not.)</td>
<td>3.1</td>
</tr>
<tr>
<td>The EDRM model, which is explained both in overview and detail, shows what legal involvement is required at each stage, and where you might get help from. The model covers the following stages:</td>
<td></td>
</tr>
<tr>
<td>• Information Management.</td>
<td>3.2</td>
</tr>
<tr>
<td>• Identification of what data you might need.</td>
<td>3.3</td>
</tr>
<tr>
<td>• Preservation of that information.</td>
<td>3.4</td>
</tr>
<tr>
<td>• Collecting the data without “polluting” it.</td>
<td>3.5</td>
</tr>
<tr>
<td>• Processing the data to cull it down to potentially relevant material.</td>
<td>3.6</td>
</tr>
<tr>
<td>• Reviewing it.</td>
<td>3.7</td>
</tr>
<tr>
<td>• Conducting analysis on the reviewed information</td>
<td>3.8</td>
</tr>
<tr>
<td>• Producing, either at the disclosure stage or for trial.</td>
<td>3.9</td>
</tr>
<tr>
<td>• Presenting the information in court.</td>
<td>3.10</td>
</tr>
<tr>
<td>A short resume of the EDRM model, and how it works.</td>
<td>3.11</td>
</tr>
<tr>
<td>A description of Computer Assisted review (for advanced readers).</td>
<td>3.12</td>
</tr>
<tr>
<td>Why cooperation is needed and why it isn't collaboration.</td>
<td>3.13</td>
</tr>
<tr>
<td>A final summary of the Chapter.</td>
<td>3.14</td>
</tr>
</tbody>
</table>

The remainder of the Guide gives more information on eDisclosure, issues you might encounter and how to procure the right systems for your needs from the correct type of vendor.
### Chapter 2 - Guide Structure

<table>
<thead>
<tr>
<th>Topic</th>
<th>Where</th>
</tr>
</thead>
<tbody>
<tr>
<td>An examination of the different technology areas to give context to the Chapters that follow.</td>
<td>4</td>
</tr>
<tr>
<td>Three subjects about which readers need to be aware, but which are not examined in detail in this Guide:</td>
<td></td>
</tr>
<tr>
<td>• Litigation Readiness.</td>
<td>4.1</td>
</tr>
<tr>
<td>• Records Information Management / GDPR</td>
<td></td>
</tr>
<tr>
<td>• Email archiving.</td>
<td></td>
</tr>
<tr>
<td>Collecting data, both generic and in an evidentially sound manner.</td>
<td>4.2</td>
</tr>
<tr>
<td>Scanning (because cases still involve paper)</td>
<td>4.3</td>
</tr>
<tr>
<td>Objective and Subjective coding, what are they?</td>
<td>4.4</td>
</tr>
<tr>
<td>Litigation support tools, a brief overview of the area.</td>
<td>4.5</td>
</tr>
<tr>
<td>Court room presentation systems.</td>
<td>4.6</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Topic</th>
<th>Where</th>
</tr>
</thead>
<tbody>
<tr>
<td>Having given context in terms of the relevant technology areas, a number of specific aspects of the marketplace are examined.</td>
<td>5</td>
</tr>
<tr>
<td>First, a brief background to the changing legal environment, is provided.</td>
<td>5.1</td>
</tr>
<tr>
<td>A historical perspective of the marketplace grouped by different types of available tools is given, including:</td>
<td></td>
</tr>
<tr>
<td>• A general overview of the technology.</td>
<td>5.2</td>
</tr>
<tr>
<td>• Early Data Assessment (tools for getting a handle on the mass of data).</td>
<td></td>
</tr>
<tr>
<td>• Litigation Support Products (the things that do the review and analysis bit).</td>
<td></td>
</tr>
<tr>
<td>• Predictive coding or other terms for Computer Assisted Review.</td>
<td></td>
</tr>
<tr>
<td>A review of the marketplace is provided in terms of describing the different types of service providers (which for these purposes covers both software and hardware) that are out there, grouped by vendor type:</td>
<td></td>
</tr>
<tr>
<td>• A bit of background to the marketplace.</td>
<td>5.3</td>
</tr>
<tr>
<td>• Consultancy firms, the “supermodels” and the rest.</td>
<td></td>
</tr>
<tr>
<td>• Software specific organisations (firms that own their own software)</td>
<td></td>
</tr>
<tr>
<td>• Solutions / Bureau organisations (firms that use someone else’s software).</td>
<td></td>
</tr>
<tr>
<td>• Outsourcing, a brief mention to provide full coverage.</td>
<td></td>
</tr>
</tbody>
</table>
Then the Guide goes on to explore the current practical “hot topics” in this area, about which you should be aware:

- Clustering, that is automatically grouping similar documents together by software means.
- Email threading, so that you can just read the “top” email of the thread.
- Automatic language translation, not for the court but for quick and dirty review work.
- Digital audio files, can be reviewed as if they were text, that is you can jump straight to a word in the middle of an hour’s recording.
- Computer Assisted Review.
- Collecting data from social media.
- I just want to read the emails, and not spend a fortune putting the stuff into a review system.
- Charging models; How much?
- Redaction for native formats.
- Emails with non-relevant attachments.

The Guide then identifies a number of key issues you should raise with any service provider:

- Adding Privilege to just one attachment to an email. Because some products don’t let you do this.
- Re-unitisation of images of paper documents. Because paper is still with us, but some products don’t like it.
- Names normalisation, how to tame all the different versions of your email address.
- Data collection by either the client or your IT department. Don’t Do It.
- Some issues when working in Native mode. The “buried treasure” of track changes in Word, speaker notes in PowerPoint and comments in Excel cells.

A list of the main UK vendors sorted by:

- Consultancy firms (both large and medium)
- Software specific organisations
- Solutions / Bureau organisations
- Forensic Firms

Followed by a list of the main software products sorted by reference to main stages of the EDRM, ie. Software for:

- Collection.
- Processing.
## Chapter 2 – Guide Structure

- Review.
- Analytics.

And a list of all the "Plugins" you can get for Relativity.

and the software products they use.

Throughout the Guide the following boxes will be used to draw your attention to specific points.

**NOTE:** **Brief Description**

Used to draw attention to specific elements of the text.

**BEST PRACTICE:** **Brief Description**

Details a point of best practice that users are advised to follow.

**WARNING:** **Brief Description**

 Warns users of any potential issues.
3. **EDISCLOSURE – AN INTRODUCTION**

The purpose of this Chapter is to take the reader through the process of eDisclosure, starting with a definition of what it means, and what it does not mean, and then progressing (by means of an industry standard model) through the various stages of the procedure. At the end, there is a more advanced section on the specific area of Computer Assisted Review or CAR, but this can be skipped until required.

### 3.1 Definition

A simplistic definition is that eDisclosure is all about the disclosure of electronic material. However we need to dig a little deeper into that statement of the obvious.

There are two parts to the definition; the words "disclosure" and "electronic material". Let's explore the second one in a little more detail. Electronic information refers to the "stuff" that is within emails, Word documents, Excel spreadsheets and PowerPoint slide shows. This is the level that most readers will need to interact with for eDisclosure. The term also includes databases, social media (Facebook, LinkedIn, Twitter), digital audio such as recorded conversations in deal rooms, support centres et al, images, mobile phones, tablet devices (i.e. iPads and their ilk) and a host of other increasingly more exotic types/locations. All of this is known as Electronically Stored Information or ESI.

The definition of eDisclosure then becomes the process of identifying, collecting, processing, analysing, reviewing and presenting ESI for legal proceedings.

Because so much of the software in this area comes from the United States, it is as well to recognise the synonym eDiscovery, which is the American term for eDisclosure.

For the sake of completeness, eDisclosure is NOT the process of agreeing the electronic media by which information will be transferred. When disclosure was all about transferring images of pieces of paper between legal entities, there used to be
discussions on format might be used for the images, and which kinds of physical media could be used to hold the images and their data, be it "floppy disks", tapes or a memory stick. This discussion used to be incorrectly labelled as "eDisclosure", and is mentioned here to dispel any legacy misunderstandings.

3.2 EDRM Model

As you would expect for a technical process, there is an official model showing the various steps involved in the whole procedure. This is known as the Electronic Discovery Reference Model (EDRM). The model is discussed in great detail at www.edrm.net, but for the purposes of this report the standard graphic used to give an overview of the approach is shown below. Also see the EDRM entry in the Supplier’s chapter (8.1.34).

If you want to see how the various stages of the EDRM process relate to the procedural requirements contained in the CPR and the related Practice Direction, and what this means in terms of the action that you should be taking in the context of eDisclosure and when, you should refer to the eDisclosure Timeline in section 7.10.

![Electronic Discovery Reference Model](image_url)

**NOTE:** Circular Processes

Some of the lines used to link the boxes have arrowheads at each end. This implies (and very often means) that the workflow "loops" around and that having done one box, you need to go back and repeat some previous processes.

The background in the graphic shows the volume of data decreasing as the various stages are completed, with a corresponding rise in the identification of relevant material. The various processes involved in eDisclosure are shown as discrete boxes with workflows between them. The main use of the model for this review is to provide a "shorthand" to explain the functionality that different software products provide.

For example a company specialising in area of Records Information Management, email archiving and the ability to "freeze" documents within a client environment in order to meet the requirements of disclosure (the US "Legal Hold" concept), might state that they "work in the left hand side of the EDRM model". A forensic firm might focus on the purple Preservation and Collection areas, whereas a litigation support
software firm might have literature showing them focused on the blue boxes of Processing, Review and Analysis.

The following sections go through each of the "boxes" of the model and look at three things:

3.2.1 Description

The official description of the individual process/procedure.

3.2.2 Legal Implications

What you as a lawyer might become involved in within this particular process.

3.2.3 Who can help

A brief overview of the types of services and/or software products you might need to support you in this process. Wherever possible software products are named, though these are non-exclusive lists.

3.3 Information Governance

3.3.1 Description

Getting your electronic house in order to mitigate risk & expenses should eDiscovery become an issue, from initial creation of electronically stored information through its final disposition.

3.3.2 Legal Implications

This is an area also known a Litigation Readiness and is normally conducted by the client. You might be called upon to assist in terms of providing advice on data retention requirements for a specific industry.

3.3.3 Who can help

Normally the preserve of the larger consultancy firms working with their clients.

NOTE: There's a BD opportunity here

Why not approach your clients (possibly with a technology partner by your side) and engage them in conversations about becoming litigation ready. You supply the detailed legal and business specific knowledge and the client is better prepared for the "evil day" of litigation.

3.4 Identification

3.4.1 Description

Locating potential sources of ESI & determining its scope, breadth & depth.

3.4.2 Legal Implications

This is the initial stage where the client comes to you and explains their problem. Using a combination of your legal knowledge and their understanding of the organisation they work for, you should start to get an idea of where the ESI might be located. You might
want to incorporate a rough outline of the scope in your initial client care letter, you might be happy with going on what the client tells you (it is their data after all), or you might want to delve a little deeper into what data silo’s exist.

This is very much a "horses for courses" area. A good rule of thumb is; do you know enough about the client and their technology to run a "sanity check" over what they are telling you?" If not, you might want to get some professional help to try and uncover the "nasties", before they bite you downstream.

3.4.3 \section*{Who can help}

Some eDisclosure suppliers specialise in producing something called a "data map". This is NOT a technical document showing all the servers and other bits and pieces that makes up the client’s IT infrastructure. Rather it is a written description (possibly with a diagram or two) of where the various data sources are. For example; “Most of the information is stored on the email servers, but some is on the back-up tapes, and there is a company the main firm took over last year that has got its own IT infrastructure which will need to be examined.”

\begin{center}
\textbf{BEST PRACTICE:} \hspace{0.5cm} Build a “Data Map” as soon as possible
\end{center}

Should be a single piece of A4 that describes where the data is stored and any issues surrounding it. Print it out and have it on the front of the Matter file. The overall concept of a “Data Map” is embodied in Section 2 of the DRD.

\section{Preservation}

3.5.1 \section*{Description}

Ensuring that ESI is protected against inappropriate alteration or destruction.

3.5.2 \section*{Legal Implications}

Once you have determined the possible scope of the areas you might (or definitely will) be collecting data from, you need to ensure that the client doesn't delete or damage the ESI in those locations. Again this might be something for your initial engagement letter and you might need technical help. You might cover things like; stopping the re-use of back-up tapes (it can be cheaper to buy a whole new sets of tapes that over-write important evidence), or removing the limits on email in-boxes that cause emails over 60 days old to be deleted, or putting a hold on the re-use of the PC, that was used by the employee who is now suing your client.

3.5.3 \section*{Who can help}

There are very expensive, mainly US based tools that will enforce the American concept of "legal hold". If your client has got this kind of software in place, they are probably involved in serial litigation and you won’t be reading this kind of Guide.

The key area that causes problems is when there is a “disconnect” between the client and their IT department. You might want to make sure that someone from the client’s IT department is involved in the initial meetings/conversations so that they can understand what you are asking the client to do. If you are not comfortable with your level of technical knowledge you might want to take along support from a vendor so they can talk “Geek to Geek”. 
3.6 Collection

3.6.1 Description

Gathering ESI for further use in the e-discovery process (processing, review, etc.).

3.6.2 Legal Implications

As a rough guide, there are two kinds of data collection, those that require a forensic process (complete with chain of evidence documentation) which is normally in cases of fraud, and the rest, where you just need to collect the data in a competent manner. The first group is a specialist area, and if you are involved in this kind of proceedings, you probably have got a "tame" forensic investigator that you can use, if not you need to find one. The forensic data capture might also involve things like retrieving data from mobile phones, making forensic copies of PC's or other computer equipment, and all other kinds of highly specific activities.

For the more general data collection requirement, there are issues here, more fully explored in subsequent chapters. Suffice it to say, that it is best to have a qualified individual or service provider collect the information and there are pitfalls involved in letting the client do it for themselves. However, in some cases this might be OK.

There are two schools of thought on the scope of data collection. One is that you collect very broadly (so you only disturb the client once) and use the downstream processing to winnow out what you need. The other is that you do a focused collection and run the risk of having to come back and widen the scope. Each is valid, and they are non-exclusive, in that you can start focused and (if the case progresses/warrants it) come back later and do a wider collection for downstream culling.

This is where an understanding of the case, and where the information is stored is invaluable, as you can then make informed decisions. With, of course the price of the different options and how it affects the downstream processing very much to the forefront of people's minds.

3.6.3 Who can help

The forensic data collection organisations are a specific grouping of service providers. Make sure that you get a forensics company and not just a litigation support service provider that has sent someone on a data collection course. They tend to use products such as Guidance EnCase or Access Data's FTK toolkit to carry out the collection process, indeed these products are often used by the other group as well, just without the formalised chain of evidence documentation. The key thing is that people in this
first group are used to appearing in court as an expert witness to explain how they obtained the specific piece of information.

The second type of data collection can be handled by a number of vendors, though in practice using the specialist organisations and dispensing with the formal side of things is a sound tactic.

3.7 Processing

3.7.1 Description

Reducing the volume of ESI and converting it, if necessary, to forms more suitable for review & analysis.

3.7.2 Legal Implications

The "shorthand" term for this stage is Early Case Assessment (ECA), or more accurately Early Data Assessment. This is where the range of options open to you increases quite dramatically. In the main the processing goes through two stages; first the data is "cleansed" in that unwanted types of information are automatically removed, this process can also involve the identification of duplicate versions of emails etc. Second, the data is loaded into a tool that allows the user to identify the information they want to take forward into the next stage.

The capabilities of the tools at this stage are quite bewildering, but in the main, you are trying to identify the information that you will want for your case, so an understanding of the key people involved in the matter (normally called data "Custodians" in techie speak) is good, as well as the date range that covers when key events happened. You might have an idea of the kinds of terms or keywords that would be useful to search on, but there are other much more powerful technologies at your fingertips that will surpass the results of keywords.

The key to getting maximum benefit from this stage is for you to team up with a sympathetic vendor and let them drive the technical process, whilst you supply the background and legal requirements of the matter.

BEST PRACTICE: Build a partnership with a service provider

Let the service provider drive the processing software; you should focus on giving them the salient points of the case issues, so that you can identify and cull out unwanted data.

3.7.3 Who can help

The choice of software here is split into two groups. On the one hand there are products specifically designed to work in this area. These range from software that third party suppliers use such as Veritas eDiscovery Platform, IPRO's eCapture tool, or Nuix, through to tools specifically designed by suppliers for this area, like the snappily named MM/PC tool from eMag. There are a number of these specialist tools, and the mention of those above is not to elevate them above the rest, purely to show examples of the genre.

Secondly, there are products from the next stages of the process (Review & Analysis), that incorporate functionality for this step as well. Products such as Ringtail, come to
mind, as does Relativity’s Relativity Processor software, and Opentext (used to be called Recommind) offerings. Again, these are mentioned as examples and not as an exclusive list.

In the first few editions of the Guide, the Early Data Assessment modules of the “All in One” products did not match the functionality provided by dedicated tools. This is no longer the case, which is good news in one way as it adds to the choices available to you, and bad news in another, as it adds complexity to the selection process in this area.

NOTE: Controlling costs starts here

Getting a good deal on processing costs is as important as having the latest technology. There is no escape from this, you have to put in some effort in building a relationship with a service provider in order to understand your option.

3.8 Review

3.8.1 Description

Evaluating ESI for relevance & privilege.

3.8.2 Legal Implications

For many, this and the next stage form the hub of the eDisclosure process. The products mentioned here will be the environment in which you and your legal team will conduct most (if not all) of your on-line interaction with the data. The first half of the equation is the ability to review ESI and assign values for: Relevance, Privilege, Trade Secret, Personal Data, and as many case-specific topics as you can shake a stick at. By the time you are in this stage, you will (hopefully) know what the issues are that you will be fighting the case on, and the various criteria you will apply to determine relevance et al. Your role will probably be to oversee the team that is carrying out this review work, though in smaller cases you might be doing the work yourself.

For large scale review exercises; you might have to recruit contract legal staff to do the work under supervision or farm the work out to one of the London based managed review facilities. You might have a “near shore” option of a cheaper office outside of London, or you might be involved with an off-shore Legal Processing Operation such as Integreon (India) or Exigent (South Africa). In essence you will direct the team (whatever the size and geographical location) and provide overall Quality Assurance back to the Client.

3.8.3 Who can help

The short answer to this one, is a lot of service providers. There is a lot more analysis of the firms and their products in the Chapters after this, but the broad split is between organisations that have their own software, and specialist software products that are supplied by different types of third party vendors be they consultancies (of different sizes) or more generic companies (that come from different backgrounds). There is a bewildering mix of software functionality and supplier personnel that combine to give you a multitude of options.

The key is that you should go through a procurement exercise before you are deep in the middle of a case, and thus make the decision in a rational cost effective manner,
and not as a result of a frantic phone call to the first service provider you can find on a Friday afternoon.

That is what the rest of this Guide is about.

**NOTE:** What works for one firm, doesn’t for another.

The “right” software for law firms, varies according to the people on the legal staff, the kind of law they specialise in, the functionality of the software and the “chemistry” with the people from the service provider.

### 3.9 Analysis

#### 3.9.1 Description

Evaluating ESI for content & context, including key patterns, topics, people & discussion.

#### 3.9.2 Legal Implications

This stage is so interwoven with the previous one, that though they are separated for technical reasons, in practical terms they will often take place within the same piece of software (albeit in some cases with the assistance of specialist plug-in modules).

The trick here is to understand what you need to do in order to meet the legal requirements of the case, and then how the technology can help you. By legal requirements I mean the issues of the matter as bounded by the court, cost and time. There is a scale of software tools available, and which ones you use are defined by the case, not by the product.

I find a useful analogy is the way in which it is possible to capture TV programs so they can be watched when we like. At the bottom end of the scale are VHS / Betamax video recorders, which are good for looking at something from start to end, but that's about it. So if you want to do a linear review in which you look at virtually every bit of ESI from "document" one to one million, then there are products that are the equivalent of a VHS player that will help you do just that.

If, however, you have a more complex viewing requirement and want the equivalent of Sky HD+ box that allows you to record three shows at once, pause live TV, access the past 7 days of shows and download movies from on-line services, you want the litigation support products with more functionality.

The elephant in this particular room that everyone is avoiding is the concept of Computer Assisted Review or CAR. At this stage all we will do is acknowledge its existence, note that it has a formal definition in a Section or to, and hold that thought until we get to the following Chapters which give you an idea of all the different technologies that are available.

**BEST PRACTICE:** Understand the "what", not the "how".

No-one (particularly the Judiciary) will expect you to be able to explain the workings of the software. If you build an approach that samples the output to show it is working, then you have the basis for agreeing/arguing with your opponent at the first CMC.
3.9.3 Who can help

Same as before. Lots of service providers can help. The trick is to select one who can become a trusted partner, before it all starts getting too hectic.

3.10 Production

3.10.1 Description

Delivering ESI to others in appropriate forms & using appropriate delivery mechanisms.

3.10.2 Legal Implications

You will want (have) to agree with the other side the scope of what you are delivering. The technical details of what is being handed over can be left to the service providers with the following exception.

It is assumed that the majority of the cases that readers of this Guide are involved in will focus on emails and their attachments, which will mainly be MS Office outputs in terms of Word, Excel and PowerPoint, with some PDF's thrown in. The battleground here can be the format of those ESI items. Word, Excel, PowerPoint exist in what is called "Native" mode inside their programs, that is you can modify and change the contents of the document, spreadsheet or presentation. Those Native documents have something called metadata associated with them, things like the original creator of the document, the date it was last printed etc. For Excel and PowerPoint, unless the ESI is handed over in Native mode, it isn't much use to the other side, so they will (quite rightly) insist upon it being handed over in that form. Word can cause all kinds of headaches, in that it can contain "Track Changes" which in turn may or may not hold privilege information etc. An option (reached by agreement with the other side) might be to create text searchable PDF's and only hand those over.

If the opposition suggests only giving you "TIFF" images of the ESI, you should reject it.

It is sufficient for this level of explanation to know that there are issues in the production of ESI and be aware of them and your preferred approach long before you start engaging with the other side.

![WARNING: Don't "degrade" information](image)

Neither you nor the other side should be taking 100% searchable ESI and turning it into images of printed pages. Those kind of games are contrary to Paragraph 34 of PD 31B and could result in an adverse order for costs. If your matter falls within the scope of CPR PD 51U (the eDisclosure Pilot) then the default mode for data exchange is “Native”.

3.10.3 Who can help

Whoever is supporting your litigation software should take care of the technical aspects of exchanging information. You should work with them in understanding the implications of the options that the opposition give to you. A useful best practice protocol and guidelines is available for free [here](link).

Andrew Haslam - eDisclosure Systems - Buyers Guide 2020  Commercial in Confidence
V8_1
Chapter 3 – eDisclosure – An Introduction

3.11 Presentation

NOTE: Used to be only for the specialist few

It is rare that you get to use presentation systems such as those deployed in the Leveson enquiry. Of more likelihood is a request for a set of linked PDF’s and that is something the service providers will happily do for you. Since 2013 and the advent of the Magnum product from Opus 2, you are more likely to find technology in the court room.

3.11.1 Description

Displaying ESI before audiences (at depositions, hearings, trials, etc.), especially in native & near-native forms, to elicit further information, validate existing facts or positions, or persuade an audience.

3.11.2 Legal Implications

This used to be a very US centric part of the model, and not something the majority of users of this Guide would come across. However, the advent in 2013 of the Magnum system from Opus 2, and in 2014 CaseLines from NetMaster Solutions Ltd, mean that if your case does make it all the way to court, you might well be using an computer system to help you. At a lessor level the ability to create a linked "bundle" of PDF documents is something more firms are becoming aware of, and using where appropriate. 2017 saw the arrival of the XBundle software suite in this area. 2018 ushered in both the TMX trial presentation product from Epiq, aiming to provide competition for Opus 2 and the marketing of the eponymous Bundledocs for the PDF linking solutions.

3.11.3 Who can help

In England and Wales this is still a specialist area and readers will be able to find the suppliers very easily.

3.12 EDRM Summary

At the start of the process it is about you establishing the scope of the case, identifying the real issues, and then designing and driving the data collection and culling in an informed manner. You should NOT have to get involved in actual processing of data. Once you are into the Review and Analysis stages, there is a very large range of options. The best advice is to carry out a procurement exercise, were you try as much as possible to compare Apples with Apples. That is what the rest of this Guide is about.

3.13 CARRM Model

NOTE: For Advanced Readers only

This Section is only for those individuals who are contemplating the use of Computer Assisted Review or CAR. First time readers can probably skip this bit and come back to it when they need to.

In December 2012, the EDRM team published a draft model and definitions for the area of Predictive Coding, otherwise known as Technology Assisted Review (TAR) or, as they (and a lot of other people) prefer to call it, Computer Assisted Review (CAR).
The model shown below is followed by the text from the EDRM site.

3.13.1 EDRM’s Technology Assisted Review Reference Model

Technology Assisted Review (TAR) is a process of having computer software electronically classify documents based on input from expert reviewers, in an effort to expedite the organization and prioritization of the document collection. The computer classification may include broad topics pertaining to discovery responsiveness, privilege, and other designated issues. TAR (also sometimes called Computer Assisted Review, or CAR) may dramatically reduce the time and cost of reviewing ESI, by reducing the amount of human review needed on documents classified as potentially non-material.

The framework below was developed in 2012 by an EDRM team to document the steps of the TAR process. Like the EDRM framework, the TAR framework should be a useful reference for e-discovery practitioners at corporations, law firms and elsewhere; e-discovery services and software providers; and organizations evaluating e-discovery tools. In 2017, a new EDRM team is undertaking a project to develop TAR standards, using this framework as the launching point.

Find out more here.

The Major Steps in the CARRM Process are described below

3.13.2 Set Goals

The process of deciding the outcome of the Computer Assisted Review process for a specific case. Some of the outcomes may be:

- Reduction and culling of not-relevant documents;
- Prioritization of the most substantive documents; and
- Quality control of the human reviewers.

3.13.3 Set Protocol

The process of building the human coding rules that take into account the use of CAR technology. CAR technology must be taught about the document collection by having the human reviewers submit documents to be used as examples of a particular category, e.g. Relevant documents. Creating a coding protocol that can properly incorporate the fact pattern of the case and the training requirements of the CAR system takes place at this stage. An example of a protocol determination is to decide how to treat the coding of family documents during the CAR training process.
3.13.4 **Educate Reviewer**
The process of transferring the review protocol information to the human reviewers prior to the start of the CAR Review.

3.13.5 **Code Documents**
The process of human reviewers applying subjective coding decisions to documents in an effort to adequately train the CAR system to “understand” the boundaries of a category, e.g. Relevancy.

3.13.6 **Predict Results**
The process of the CAR system applying the information “learned” from the human reviewers and classifying a selected document corpus with pre-determined labels.

3.13.7 **Test Results**
The process of human reviewers using a validation process, typically statistical sampling, in an effort to create a meaningful metric of CAR performance. The metrics can take many forms, they may include estimates in defect counts in the classified population, or use information retrieval metrics like Precision, Recall and F1.

3.13.8 **Evaluate Results**
The process of the review team deciding if the CAR system has achieved the goals of anticipated by the review team.

3.13.9 **Achieve Goals**
The process of ending the CAR workflow and moving to the next phase in the review lifecycle, e.g. Privilege Review.

![WARNING: Driving a CAR needs skill.](image)
CAR technology is very powerful, but needs to be understood. A degree of mathematical skills is required to both use the tool fully and explain the methodology to the other side. If you don't have those skills, consider adding them to your legal team, possibly from the supplier of the product you are using.

TAR / CAR is mandated in the eDisclosure pilot for any matter where the review scope is over 50,000 documents. You need to bear this in mind when selecting a supplier.

3.13.10 **CAR is evolving**
Some suppliers are now talking about TAR/CAR 2.0, implying that there has been an evolution in the approach to this process. More detail on this at 5.4.5.

3.14 **Cooperation in England and Wales**
Though not part of the EDRM model, this part of the Guide would not be complete without emphasising the focus on cooperation for the eDisclosure process within England and Wales. Practice Direction 31B requires that "the parties and their legal representatives must, before the first case management conference, discuss the use of technology in the management of Electronic Documents and the conduct of proceedings". PD 51U takes the emphasis on cooperation a lot further in the approach embodied in the joint drafting of the Disclosure Review Document (DRD).

Consider a meeting with the other side where both parties have; their legal representation, the client(s), the client's IT representative(s) and the litigation support
providers. Use this to agree the various processes you will undertake and how the information will be shared. There is still plenty of room for argument on all the other issues of the case, but in this area you are expected to present a united front to the Judge.

If you can't agree then you can apply for directions from the court, but this could be a risky business with no one liking the outcome. Far better to have discussed and agreed up front, and the earlier in the process the better. In some cases engaging an experienced neutral mediator to facilitate the parties in reaching a consensus may be a more satisfactory way of resolving disputes which may arise.

**BEST PRACTICE:** Cooperation is not collaboration.

Working with the other side to smooth the path of eDisclosure is essential. You can still put your arguments and fight your case, just don't waste time and effort being obstructive. It will almost certainly add to the costs.

### 3.15 Overall Summary

By this stage a reader should be comfortable with the definition of eDisclosure and the various stages it encompasses. They should also be familiar (at a high level) of what involvement they as a lawyer might have with each part of the process and what tools and service providers are available to help them.

To summarise the current position, most of the significant "players" in the litigation software world have similar capabilities, albeit they might be grouped as ECA on one hand, or litigation support on the other. The main products are truly Unicode compliant, have near duplicate facilities, “cluster” data into concepts without intervention from users, as well delivering a rich search environment and the ability to easily manipulate the results of enquiries.

The differences are evident in which area of the EDRM the product addresses. The ECA tools are far more focused on processing large volumes of emails and their attachments, with emphasis on various techniques to try and identify the potentially relevant data. Litigation support software has more focus on the review of documents for relevance and privilege, and the preparation of a case around identified themes, leading to a disclosure exchange and downstream courtroom production. Confusion arises because the various products are continuing to mature by absorbing functionality from competitors. Thus ECA tools drift into the right of the EDRM and litigation support products to the left.

Now we add to this complex mix the whole concept of Computer Assisted Review (CAR) which can be presented as a "Black box technology that supplants lawyers, so be afraid, be very afraid", when nothing is further from the truth.

Where this leaves readers trying to assess which product they should choose, is that they have to evaluate what piece of software works best for them, and their circumstances. Unlike scanning, coding and (to some extent) forensic support services, it is not possible to select a supplier on price and functionality alone. Firms need to evaluate the software by means of demonstrations (preferably with their own data) and then (optionally) trialling rival products against each other to gain an understanding of what suits their individual unique requirements and work mix.

The remainder of this Guide aims to provide information to enable readers to achieve those aims.
NOTE: What's Next?
The rest of the Guide take you through all the things you need to know in order to procure Litigation Support services and software. If you are not at that stage yet, then you can stop now, though there is some good detail on pitfalls and technical issues in Chapter 5 you might want to skim through.
4. TECHNOLOGY AREAS

The aim of this Chapter is to provide a brief outline of the various areas of technology in order to provide context for the rest of the Guide. It is not intended to provide a comprehensive description of each area, more a taste of the requirements and an overview of the main issues to be aware of.

The Chapter first looks at those areas that are outside the main scope of the guide and then goes through the remainder in a roughly chronological sequence within the timeframe of a project.

Though the Guide mainly focuses on eDisclosure, there is mention of scanning as many cases still involve paper alongside the ESI material, so the topic is covered for completeness.

NOTE: Do I really need to read this?

This gives more context and detail on the different tools that you have at your disposal. If you think you have a good enough understanding already, skip to Chapter 5.

4.1 Litigation Readiness / RIM / Email Archiving

This Section examines those technology areas which (as at this version of the guide) are outside of scope. It is included to provide background information on these areas, and might in subsequent issues also provide a springboard for the addition of more information on solutions within these topics.

4.1.1 Litigation Readiness

A common analogy is that, if litigation support and eDisclosure are the ambulance at the bottom of the cliff, then litigation readiness is the fence at the top that stops you falling over. Litigation readiness is inexorably bound up with a sound Records Management policy, and this in itself is a good efficient business practice. Indeed for some firms in the financial sectors, the demands of Sarbanes Oxley, the Financial Services Act, Basel 2 and MiFID, make a sound records management strategy an essential element of their business. Increasingly, the way in which a business handles electronic data has a value in its own right and that value is being assessed in Merger and Acquisition situations. The demands of the Bribery Act only increase the pressure for organisations to have a good grasp on the control and management of their ESI.

As well as the regulatory and compliance drivers, there are increased risks for firms involved in global transactions and a poor or badly prepared response to litigation can result in significant brand tarnishment, or even the destruction of the company. On a more pragmatic level, there is a good business case for controlling the spiralling costs of eDisclosure, and let us not forget, a key element of the rules changes in both the US and England, was the requirement for lawyers to specifically address the challenges of eDisclosure. That initiative was re-addressed with PD 51U in 2018.

For more information on this topic see the whitepaper stored here.

4.1.2 RIM / Document Retention Policy/GDPR

As just mentioned, one of the other main elements in this area is that of policy as encapsulated by Records Information Management as a topic title, and Document Retention Policy as a specific concept. Of course what is really meant by a retention policy, is when can you delete or destroy records. That being said, a rational policy that at least removes all the superfluous duplicate copies of emails and other ESI items, does pay dividends once litigation is underway and you have to collect and process all of those individual files.
The main priority in this area is to ensure you are doing the best you can to conform to the relevant legislation, so I would advise users to approach their normal provider of legal advice for guidance.

A brief mention of GDPR. The UK made GDPR law in May 2018. At the time of writing, the situation around BREXIT is still confused, so the adequacy of the UK data protection standard as measured against the EU in unknown. There is an increasing awareness of how the level of data management required to comply with GDPR, also overlaps with litigation readiness and overall good practice.

As rule of thumb, if your matter is within the jurisdiction on England and Wales you should aim to store your data with a supplier who's servers are based in the UK. If you have EU data, you might have to consider storing the data in an EU location, depending on the outcome of BREXIT.

NOTE: Another BD opportunity

Did I just hear someone say they wanted proactive legal advice on industry specific areas so I can show how much I know about your business and how I might help when it comes to litigation?

4.1.3 Email Archiving

In a way, this is a Ronseal title, in that it does what it says on the tin, that is, these are systems that archive email. At a very high level the choices on offer mainly fall between having an in-house system, or using an external "cloud" based provider. Again at a high level, the first generation of offerings seem to be based around the in-house option, with more sophisticated functions and pricing coming for the second generation of cloud based products.

4.2 Collection – Forensic & Generic

Once the data you need has been identified, the next step is to collect the information. This is normally the preserve of vendors who provide specific services. Alternatives that normally should be avoided, are either using your own IT department to carry out the work, or letting the client's IT personnel do the collection. See Section 5.5.4 for more on the issues surrounding these choices.

The skills required to provide forensic services are very specialised, and take time to acquire. Therefore the firms operating in this area tend to be relatively small, even when the team itself is part of a large organisation such as the forensic groups of the big consultancy firms. It has been known for clients to form working relationships with specific individuals in the forensic world and remain "loyal" to that individual even when they change the organisation they work for.

The requirements tend to split into two areas, the provision of forensic services and the collection of ESI in a competent manner, which might have to conform to evidentiary standards. As a rule of thumb, forensic services are normally needed when fraud is suspected and information has to be retrieved from mainstream computer systems and/or more obscure places such as mobile phones, tablet devices and online social network sites.

See Section 6.5 for draft requirements within this area.

4.3 Scanning

By and large, scanning is a commodity item with most suppliers providing similar services. Prices are normally based on scanning black and white A4 pages that have printing on one side, and creating TIFF images at 200 or 300 Dots Per Inch (DPI).
Exceptions to either the colour or size of the document cause the price to increase. It is normal to get the vendor to use a process called Optical Character Recognition (OCR) to derive a text version of the images. Even the best OCR process will contain spelling mistakes, with a 99.9% accuracy rate equating to 4-5 misspellings on a single sheet of A4.

The main issue to watch out for in scanning is that of unitisation, in this specific area we are focused on how the images that result from a document are then "bound" together to form the set of “pages” representing the document. An issue can arise whereby the supplier carrying out the scanning obtains the images, but these are passed to a second supplier for coding purposes. The individuals in the second supplier look at the images and derive the unitisation of the documents from their interpretation of where document breaks occur, without being able to reference the original documents and thus seeing how they were stapled or attached via paperclips etc. together.

Scanning vendors have two approaches to this issue. The majority use their operators to "manually" unitise the images of the pages in the files. The more sophisticated minority have pre-prepared slip sheets that they insert within pages to show things like document start and end, paper clips, attached post-it notes etc. Their scanning software recognises all these coding forms (and strips out the images of the slip sheets) and is able to re-constitute the electronic version of the file so that it exactly matches the unitisation of the paper version.

For smaller scanning requirement, this issue is immaterial. However for larger projects (say over 20 or so lever arch files) it can cause significant problems unless addressed.

Finally it is normal practice to uniquely identify each images in some manner so that it can be referred to. The usual methodology used to be to apply BATES numbers to the document following a pre-arranged format, with a BATES number per page, though in some systems/projects this approach is now changing. As systems increasingly accept PDF's of whole documents rather than scans on individual pages, the need to individually number each page has started to reced, with document numbers being used to identify specific records.

See Section 6.3 for draft requirements within this area.

**4.4 Objective & Subjective Coding**

It is normal process add coding to the review system to sit alongside the images (Tiffs or PDF's) of paper documents. The coding can be either Objective or Subjective coding, with most paper documents having a minimum of Objective coding. Objective coding is that information that can be derived from the document, usually this is seven fields:

- Document Date (With an additional field to show if the date had been estimated in any way).
- Document Title.
- Document Type.
- From.
- To.
- Copyee.

Subjective coding is information that is added by a suitably qualified individual on matters such as relevance, Privilege, Trade Secret, Personal data, etc.
There is debate about the need to add Objective coding to ESI. Email does not require any additional coding as it contains the date, title and addressees within itself. Sometimes coding is added to Word documents as it can be very difficult to identify the objective information from the metadata of a Word file. However, given the volumes of ESI, such coding (even when carried out overseas by an LPO) can add significant amounts to the cost.

The issue to be aware of is that there are many different dates held within the metadata of ESI items, such as date created, date last printed, date last saved, etc. Normal practice is to use the "date last saved" as the date of the document / spreadsheet / presentation / PDF, but this might well NOT be the date shown within the item. There is no easy answer here, just a requirement to be aware of the limitations of the reliance on metadata for dating items.

**4.5 Litigation Support Tools**

This Section looks at the software in this area across three broad areas. A more detailed market analysis in shown in Section 5.2, whilst Section 6.6 has draft requirements within this area.

4.5.1 Early Case/Data Assessment

Once material has been collected, it is normally passed through some form of initial assessment/culling. The tools in this area allow users to "slice and dice" the information in many ways, from removing unwanted file types, grouping by date and custodian of the information, through to more sophisticated clustering of the data using semantic analysis. This last option is where the software groups "similar" items together. The computer determines what is "similar" by conducting a linguistic analysis on the content of the ESI items as well as comparing date, time and other objective data. The power of this approach is twofold. First, it groups superfluous material so that can easily be bulk coded as irrelevant. Second, the computer had no preconceptions about issues or keywords and can sometimes produce unexpected results in its grouping that a human reviewer would not have spotted.

4.5.2 Litigation Support Systems

The systems in this area are focused on the review of "documents" in preparation for initial disclosure to the other side, and (if the case progresses that far) a trial bundle. They have facilities for tagging documents for user defined issues, as well as powerful search tools and auditable production processes. The more recent tools have built in workflow that enables large scale reviews to be controlled in a much easier manner and "logic" checks that improve the Quality Control side of things. There are a range of tools on offer within this sector of the market, from reasonably "cheap and cheerful" up to top end products. That being said, most (if not all) now share common functionality and will enable users to deliver their end product, the key here is to match user requirement with the offered functionality and only buy enough to get the job done rather than over-specify the need.

4.5.3 Multi-Purpose Tools

There has been an increasing trend over the past few years for both the ECA and litigation support products to "drift" into each other's areas in terms of their functionality. Which is to be expected in a maturing marketplace. However there are also starting to appear offerings that span the whole of the two areas combined. These come in two flavours. First a single product that from the start has been designed to cover the entire spectrum, and second products that started as discrete offerings (sometimes from different companies) but by a process of acquisition and re-development now share a code base and have seamless integration between each part.
Chapter 4 – Technology Areas

The issues here are about how well such an overarching aim can be met by a single set of software developers. The requirements of an ECA tool are quite different from that of a litigation support system and the interfaces and functionality for each area are very specific to those specific requirements. The danger here is the "Jack of all trades and Master of none" syndrome. However, as products encroach on each other's areas and as these multi-purpose tools evolve, it is probable that the successful tools of the future will span all the areas, the trick is to make sure you don't buy too soon.

4.6 Presentation Systems

The main focus in this area used to be the production of some form of court room bundle, rather than in-court presentation systems such as those deployed in major inquiries like the "Bloody Sunday", "Diana Inquest" or "Leveson" public events.

The main choice here used to be between the more traditional approach of a set of PDF files linked together into some form of eBible and more generic "cloud based" offerings. The suppliers of the eBibles tend to be those vendors with roots in scanning, whilst the preference in the cloud based solutions seems to be a choice between products from Epiq and Opus 2.

During 2013, the Magnum product from Opus 2 gained a significant amount of "traction" in the marketplace and should be explored by anyone who ends up taking a case into the courtroom. During 2020 Opus 2 provided support for online "virtual" court rooms. If these become the new normal, expect other offerings to appear from alternative suppliers.

During 2014, the CaseLines product from NetMaster solutions, was adopted by the UK Supreme court, on a trial basis, for the submission of all documents to the court. Since 1st January 2016, CaseLines has been in use at all the County Courts in England and Wales, providing a true paperless office environment. In 2018, CaseLines was adopted by the Dubai International Financial Centre (DIFC) Courts to become the first court in the Middle East to introduce a new secure cloud-based technology to allow court documents to be uploaded from anywhere in the world.

Arriving in late 2016/early 2017, was the XBundle software suite with two modules, Assemble and View, which is designed to compete in the area of creating and using electronic bundles.

Launched at LegalTech 2018 was Epiq’s TMX application, a collaborative platform for case preparation and presentation. TMX is a secure, flexible, and highly scalable sharing platform that gives international clients the ability to build electronic bundles quickly and easily for court hearings and arbitrations, while delivering to the U.S.-based users, a single collaborative tool with which litigation teams can prepare case documents for depositions and trial.
5. MARKET SURVEY

This Chapter looks at the overall marketplace. It starts with a quick review on the changing UK legal environment and how that might impact upon the choice and use of technology. There then is a review of the various areas that make up the sector, followed by an analysis of the different types of vendors, and culminates in a look at the current "hot" topics for users of the guide to be aware of.

5.1 Changing Legal Environment

It is assumed that users of this guide are well acquainted with the Civil Procedure Rules (CPR) that are the formal rules for this area within the UK. Of main interest to this guide is Practice Direction 31B - Disclosure of Electronic Documents, which took effect on the 1st October 2010 and comes with an Electronic Documents questionnaire. Further information on these topics can be found in Chapter 6. The point of mentioning these changes to the rules is that they prompted an increasing awareness amongst practitioners of law that electronic information existed and had to be disclosed (the real meaning of electronic disclosure, as opposed to arguing about the media used to hand over material).

The other key driver in this area has been Lord Justice Jackson's review of Litigation Costs that was published in its final form in January 2010. The suggestions on how costs might be managed have mainly been implemented, with judicial training on costs management starting in January 2013, and the required legislation being enacted in April 2013. For the purpose of this Guide the key factor is that parties should arrive at the first Case Management Conference with a plan for eDisclosure that they have agreed with the other side. Fundamental to the changes is that Judges will have been trained to explore how the disclosure exercise will be carried out, and if the proposed approach uses technology in an appropriate manner. So the days of printing everything, or conducting a linear review with an army of legal staff, or arguing over arcane lists of broad keywords are numbered.

During 2019/20 there will be a 2 year pilot of proposed changes to the Civil Procedure Rules for disclosure. The most straightforward and factual article about the proposals is on Simmons & Simmons' Elexica site. It summarises the proposals and the main reasons for the changes, and has links to the draft rule.

Lawyers need to "tool up" with technology and understand how to fully use the tools they have at their disposal. It is hoped the rest of this Guide will help them achieve this goal.
5.2 Market review

This Section of the Guide looks provides a historical review of the marketplace in two main areas. First a review of the overall evolution of the technology and second a more UK specific analysis of the changes in specific technological areas.

NOTE: What's this Section about?

Section 5.2 gives the background to the differences between the types of software providers. If you are happy accepting that some are "pears" and some are "apples" then go to Section 5.3. If you just want a list of the main software products go to Section 5.7.

5.2.1 Historical Market Review - Overall

The litigation support market is a maturing one, both in terms of the software products and the firms that provide them. The evolution of the software is best tracked by looking at a technology conference / exhibition called LegalTech that takes place in New York in January/February of each year. The author has been attending the exhibition for many years, and since 2008 produces an annual review of proceedings. The following summary is based on knowledge gained during those years as well as practical experience of different products. The summaries for the past 5 years only are shown below.

2015

Another year of consolidation in terms of the functionality of eDisclosure products with little to choose between the mainstream offerings. Some potentially disruptive events though. Microsoft bought the text analytics company Equivio, presumably to provide "good enough" eDiscovery functionality for Office 365. A number of suppliers embed Equivio within their software, as those licences run out it is assumed Microsoft will withdraw the product, leaving suppliers hunting around for alternatives.

Relativity continues its market leadership and for the first time availed itself of investment capital to build a "war chest" of some $125M.

By the end of March, two UK litigation support suppliers should announce they have been bought by US companies to gain a foothold this side of the Atlantic.

The increased focus of products and sales continued to be within the Information Management / Governance area.

2016

As predicted, the previous year saw significant consolidation in the UK marketplace. There were two bursts of activity, with 12 days of mergers in March/April as Unified were bought by Inventus, Merrill eDisclosure by DTI and IRIS by Epiq (though that was mainly a US focused sale). In the summer, Consilio took investment capital from Shamrock and then used it to buy two early Christmas present in December as they snapped up Proven Legal Technology and Huron Legal. At the end of December Inventus themselves were acquired by RPX and early in January of this year Millnet joined forces with Advanced Discovery. Also during 2015 Veritas was spun out of Symantec, taking the Clearwell product with it which was relaunched as the Veritas eDiscovery Platform

The focus of 2016 will be increasingly on Cloud based Software as a Service (SaaS), with UK firms moving more rapidly than they might like towards a financial model where the majority of their income is derived from consultancy rather than processing and
hosting. There will inevitably be casualties along the way, so due diligence in any procurement exercise will be even more important than normal.

2017

2016 continued the consolidation of the marketplace, In March Mishcon announced a partnership with Unified to create an organisation dedicated to providing eDisclosure support to Mishcon’s lawyers. Also in March, kCura liked the product Content Analyst so much that they bought the company, thus bringing control of their Computer Assisted review technology inhouse.

June saw Opentext acquire Recommind, whilst in July DTI absorbed Epiq to become the first $1 Bn eDiscovery company. In August, Lighthouse was given $23 M by CIT, mainly to fund expansion in the UK.

Also during the autumn, New Quest Capital partners took over Integreon, Stroz Friedberg were acquired by Aeon (to support their cybersecurity practice) and Kroll OnTrack become part of LDiscovery with their new name of KrolLDiscovery being unveiled at LegalTech.

The LegalTech show in February 2017 saw a dramatic focus on the use of Artificial Intelligence or machine learning in all areas of legal IT, with eDisclosure for once, ahead of the game with its use of CAR.

Also early in 2017, two mainly print based suppliers were taken over, K2 by Anexsys and City Docs by Apogee.

2018

This year’s LegalTech saw a shift in emphasis in the supplier booths for the first time in many year’s with a whole host of fledgling companies offering contract review using some form of AI/Machine learning. It will be interesting to see if any of this bleeds through into the eDisclosure world.

The pace of market consolidation slowed during 2017, though in September OpenText continued its acquisitions with the purchase of the forensic collection software company Guidance. Morae Legal and Clutch Group announced a merger, and Xact Data Discovery, Lighthouse and Advanced Discovery each acquired competitor e-discovery groups, and Inventus purchased Unified.

In a flurry of news in March 2018, Consilio and Advanced Discovery announced they were merging, to form the second largest eDiscovery company behind Epiq, whilst CloudNine bought all of the Lexis Nexis eDiscovery toolset; including Concordance and Law. It will be interesting to see how these mergers and acquisitions pan out during the rest of the year.

2019

The consolidation of the eDisclosure marketplace continued with a spate of US mergers, with the most interesting being the Jan 2019 acquisition of Catalyst by OpenText, with plans to enhance and continue investing in all product lines. In Sep 2018 Nuix bought Ringtail software from FTI Consulting, thus giving them an “end to end” functionality capability across the EDRM model. In Oct 2018 Consilio acquired DiscoverReady further consolidating the US marketplace.

As far as the UK was concerned, the interesting news in the eDisclosure area, was the moves by both CS DISCO and Everlaw into the marketplace, mainly in competition with Relativity. Both now have UK offices, employees and clients. The depth and range of “not-Relativity” alternatives continues to develop.
Towards the end of 2019, Nuix renamed the Ringtail element of their software to Nuix Discover and started to show the results of their investment into the R&D for the product. The rate of consolidation slowed down, in the UK mainly as there are very few companies left to purchase. There were some mergers, as Legality bought Inventus in early January 2020, alongside further investments by venture capital into the emerging software players such as Everlaw and iCONECT.

There was continued speculation about what software will be the dominant player in the years to come, best summarised in this article by Rob Robinson, proposing that the next era will belong to an (as yet to be identified) application that is simply “Not Relativity”. That being said Relativity with its amazing ecosystem of training and certification continues to be the market leader.

Look to the rest of this Guide for your options.
5.2.2 Historical Market Review – Litigation Support Products

To understand the differences between software products, it is necessary to look a little at the history of their development and they grew to meet different challenges at different time.

Initially litigation support tools were about dealing with scanned images of paper as this was the requirement in the 90's. The tools, such as Concordance and Summation, were basic search and review environments with additional products providing the ability to look at the images. The software evolved rapidly and a new generation of vendors appeared, with Ringtail and Steelpoint (which became IntroSpect) as the leaders in this area by the time you come into 2000 / 2001. They were still based on handling large volumes of images and struggled initially as the explosion of electronically stored information (ESI) hit them. Products emerged such as Kroll Ontrack's Electronic Data Review (which became Ontrack Inview and in 2013 ediscovery.com Review), Epiq's DocuMatrix and a host of others, most of which withered, or were bought out over the years. In a reflection of the struggle going on now between more "traditional" litigation support tools and their ECA brethren, so the products initially based on images and those on ESI mimicked each other's abilities, bought out software upgrades and eventually became a more homogeneous and mature market place.

The more recent products coming to the market have learnt from existing offerings and taken the best of the functionality, but wrapped it in a far more accessible interface. This used to the main differentiator between products, on the one hand you had Ontrack Inview, DocuMatrix and Ringtail, on the other were newer tools such as Relativity, cicayda and Viewpoint that had a far more "Outlook" type look and feel. Now, the interfaces are very similar, with a corresponding similarity in the function suite that is the “entry level” into the market.

5.2.3 Historical Market Review – ECA Products

The genesis of ECA was the explosion in volumes of disclosable material brought about by electronically stored information (ESI), a shorthand acronym for emails, Word, Excel, PowerPoint, PDF's and all the other data that organisations and individuals produce. The main concept underpinning ECA is that the software groups items of ESI together by virtue of data analytics of their contents and metadata. The initial product in this area was called Attenex (now an integrated component of FTI Consulting's Ringtail product), with the name itself meant to be “At ten times”, an indication of the increase in review speed you could obtain by using the product. Over the years other products have appeared, elements of ECA have been grafted into the main litigation support products and the capabilities of the offerings have expanded, with the cost also dropping exponentially. When Attenex first appeared it had a charging model of £2,000 per GB, now ECA can be accomplished for tens of pounds per GB.
One of the other key players in this market used to be the UK based firm Autonomy. They (like Recommind) come to the arena of litigation support from a background of enterprise searching and knowledge management. Recommind realised they almost had a litigation support tool in their product and added functionality to make it work. Autonomy first bought IntroSpect to give themselves a litigation support product and re-built it around their IDOL search engine. Then they purchased iManage to give themselves a document management offering. In terms of market focus, Autonomy (more so than Recommind) was pushing for domination in the corporate environment where the three overlapping areas of Litigation Readiness (IntroSpect), Knowledge management (IDOL) and document management (iManage) exist. However the events of Autumn 2012, when HP accused Autonomy of false accounting during the takeover of Autonomy by HP means that this entire product range was under a cloud for some time. As at the date of this version of the guide, that cloud has lifted and HP are once again strongly selling Autonomy, though mainly into the Information Governance area, rather than litigation support.

The most significant current thing in the ECA world, is that it seems to have firmly breeched the corporate firewall. By this I mean that the software runs inside a corporate environment and, when required, can by issue legal holds and then incorporate these into a focused search on "held" material to identify the data that needed to be processed further. Though the whole Legal Hold concept didn't really apply in the UK, there will be some clients in litigious marketplaces that this would be of interest to. Also the UK Bribery Act is providing an impetus for organisations to look again as to how they manage their electronic information. In this area, products from eDiscovery tools, and Recommind are mentioned as ones to watch.

For the moment, the focus for the UK is on the ECA tools that mainly operate outside the end client's environment. In practice this has tended to mean one of three products, Veritas eDiscovery Platform, Nuix or Digital Reef, with (up to now) only the first two really having success. It seems that lawyers prefer Veritas eDiscovery Platform to Nuix because of its interface and seemingly better functionality. Technology departments chose the speed and performance of Nuix, over what they consider to be its slightly flashier competitor. The Recommind product range incorporates both ECA and standard litigation support tools, as does Relativity with its Processor and Review offerings, Lateral Data's Viewpoint and Venio with Venio. Nuix's purchase of Ringtail in late 2018 gave it end to end capability.

5.2.4 Historical Market Review – Predictive Coding Products

The phrase "Predictive Coding" is shorthand for any process that uses computing power and software algorithms to try and carry out coding of electronic documents. On one level the machine can carry out objective coding and scan the document for the data it can "recognise" to give you the From, To, Title, Date kind of material. So far so good. Next you get the programs that will "search" the document and highlight the terms that it thinks means the document should be relevant and even highly subjective calls such as Privilege.

However there are caveats. The software will only really work on fully electronic material, so you cannot get the same results on the OCR of images of scanned documents. Second, most products require the user to "seed" the review work with appropriate documents that have been reviewed by a human (normally senior) lawyer, so it is not a silver bullet that will solve all your problems. Finally, no one is (yet) suggesting that the relevance and privilege reviews are totally done by the computer, the software puts forward documents that meet criteria and asks humans to validate its choices.

What is significant, is that the documents that are not selected, are never looked at. Yet this in itself, ties into the UK approach to proportionality. To paraphrase the UK
approach, there might indeed be a slight chance that a "smoking gun" exists in the far reaches of the potentially disclosable material, however, it can be far too expensive to review everything and so that faint possibility must not be allowed to drive the review strategy.

5.3 Vendor Analysis

NOTE: And what’s this Section about?
This gives the background and detail of the different types of suppliers so that you can understand the relative strengths and weaknesses of each type when you ask them to demonstrate their software. If you just want a list of the main UK organisations go to Section 5.6.

The purpose of this section is to give a brief overview of the different types of vendor that users of this Guide will encounter in the marketplace. This is done so that the relationship between the software offerings and the people that supply them is understood. It is deliberately UK focused.

5.3.1 Background / Gartner Report
The definitive guide to the eDisclosure marketplace used to be provided by the analyst firm Gartner. It published annual reviews in May of each year from 2011-15. Retailing at some $1,500 they used to normally be obtained for free, via vendor’s websites for the "cost" of an email address for marketing purposes. One of the key elements of a Gartner report is its use of a "Magic Quadrant" to categorise firms according to both their ability to deliver functionality and the completeness of their vision. It is a useful background document, but is very US centred and does not cover third party suppliers. That is the purpose of this Guide.

In 2014 one of the main themes of the reporting on the Gartner report was how similar the Magic Quadrant was to the previous year, suggesting that the market had paused and a period of consolidation was about to start. This was confirmed in 2015, with what was the final version.

5.3.2 Consultancy Firms
Up until 2010, this group was mainly the accountancy / consultancy firms in Deloitte, KPMG, E&Y, PwC, Navigant, etc. In 2010 however, two formally independent third party suppliers were bought out by firms eager to provide litigation support to their clients. Legal Inc became part of Grant Thornton and Trilantic was bought by Huron Consulting. In both cases the litigation support firm gained the financial backing and larger access to market of their "parent", though there was perceived to be a slight disruption to their ability to deliver services during the initial "bedding in" period. This dissipated during the year.

2012 saw further consolidation with 7Safe being acquired by PA Consulting at the start of the year, and in June, Palmer Legal Technology (PLT) became part of Proven, a litigation support and investigations firm. In December 2015, Proven was acquired by Consilio.

This group can realistically be split into two "camps". In one there are the "supermodels" of the big accountancy based firms, Deloitte, E&Y, KPMG, PA Consulting and PwC. This group are larger scale firms that tend to exist of a steady diet of work generated by the rest of the organisation. Some are interested in the bigger litigation projects, but users of this guide are more likely to encounter them when the client announces that they will be using their services and the law firm will just have to comply. In house counsel might have far more to do with this group, and will have their
own opinion on the strengths and weaknesses they bring to any project. I have labelled these the "supermodels" in that the litigation projects normally have to be of a certain size to warrant them "getting out of bed". If your matter is large enough to be of interest to them they can provide a premium service at (for the main) a premium price. If it's Friday and you have 1 GB of data you need to get processed by Monday, you probably don't bother with these guys, as the conflict checks alone might take the weekend, if not longer.

In the second sub-group are the relatively smaller consultancy organisations such as Consilio, FTI Consulting, Grant Thornton, and Ankura (formally Navigant). I use the words "relatively smaller" as though they might not be as large as their "supermodel" brethren, they are significant organisations in their own right and much larger than the third party suppliers they compete against. These are much faster at processing their conflict checks, taking hours rather than days, and are interested in smaller projects (using the "set a sprat to catch a mackerel" sales approach). It might be worthwhile approaching them on the ubiquitous Friday afternoon scenario, but do be aware they can take slightly longer to respond, as they come with their own QA process that does have an overhead. But if that is what you need, then they will be a Godsend.

In summary there are good people doing good work within the teams inside the large (and very large) organisations. There are pro's and con's with selecting a "larger" firm over a "smaller" one, these will emerge as each potential user evaluates their own requirements against the supplier's strengths in the procurement process.

5.3.3 Software Specific Organisations

This group is the firms that own the software that they bring to market and thus have greater control over its development path. However, obviously, their consultancy and approach to litigation services is predicated upon their own software. In the UK, this group is split between two groups, the more numerous UK arms of US based firms, and a smaller group of UK headquartered organisations.

In the first group there are firms such as; (a non-exclusive, alphabetical list follows), Aon (that used to be Stroz Friedberg), DISCO, Everlaw, Epiq, KLDiscovery, OpenText (that used to be Recommind), SullivanStrickler and Zylab. In the second is only eMag now owned by Insurgo.

These firms are financially secure and (generally) have a depth of resources, though there is a perception that, for some of them, their project management teams always seem to be stretched. They are generally the more corporate offering as opposed the final grouping described next.

5.3.4 Solutions/Bureau Organisations

The members of this group tend to be relatively smaller firms that thrive on offering a variety of solutions to end users and can match their products to the specific requirement of a case. There is an element of this grouping that came from a scanning and coding background, with others from the forensic services area. These firms are sometimes more "nimble" than their bigger brothers and can be more focused on client care, but carry a slighter greater risk in terms of their financial standing and long term viability.

Rather than list the UK "players" here, readers should explore Chapter 8 to get a feel for the vendors that are out there and their offerings. There are significant number to choose from.

5.3.5 Outsourcing Organisations

There are a number of Legal Processing Organisations (LPO), with the majority of offerings based in either India or South Africa, with both Epiq and Integreon also having
a UK base and supplying services to a number of larger law firms. These organisations tend to be software agnostic and mainly (in this marketplace) provide a cheaper option for carrying out larger scale review work. Using these organisations is normally something that is done by the experienced litigation support client, so there is some coverage of LPO's in this guide, but not a significant amount. Again, readers should explore Chapter 8 to get a feel for the vendors that are out there and their offerings.

5.3.6 **External Review Teams**

There are a small number of organisations that will provide review teams of experienced legal staff (paralegals and/or lawyers). These teams can either work off-site or on your premises. The individuals are normally very familiar with a number of review tools and are agnostic in terms of the vendors. They have the advantage that the teams can be deployed very quickly and just as quickly reduced in numbers. The organisations also increasingly offer access to bilingual skills in Russian and other eastern European languages as well as the more common EU varieties. The ones in this version of the Guide include:

BCL Legal, Codex Global, Epiq, i-Lit Paralegals, Special Counsel, TransPerfect Legal Solutions.

5.3.7 **Managed Review Facilities/Teams**

Similar to the previous section, during 2014, there was a flurry of organisations offering managed review services within their own premises, in response to a growing demand from law firms. The suppliers offer a (normally) London based secure facility, alongside the ability to rapidly provide reviewers skilled in a specific review tool, very often with a specific language ability. All suppliers tell stories of being rung on a Thursday night with requests for "a team of 20 reviewers to work from Friday through the weekend in order to complete the project by Monday morning". If that's your idea of forward planning then these people exist to meet your needs.

The ones in this version of the Guide include:

Altlaw, Anexsys, Consilio, Epiq, KLDiscovery, Integreon and Inventus.
5.4 Current Issues / "What's Hot"

This Section of the guide looks at those issues that are "hot" within the marketplace. It will be revised with each version of the guide, and the author welcomes input on areas readers would like to know more about.

<table>
<thead>
<tr>
<th>NOTE: Why do I need to read this</th>
</tr>
</thead>
<tbody>
<tr>
<td>Some of these are the tools above and beyond key words, that can enable you to complete eDisclosure within a tight budget. Even if you aren't using them, the opposition might well be, so you need to know what they are talking about.</td>
</tr>
</tbody>
</table>

5.4.1 Clustering

Clustering is the ability to automatically group together documents with similar content. It was pioneered by Attenex and their "petri dish" visualisation of the documents, with clusters running off a spine of a shared set of keywords. Other software companies have followed suit in terms of technology, if not the way they display it. Most useful in the context of "find me all documents similar to this one", which can enable bulk actions such as making the document set relevant, or eliminating it from the review process.

5.4.2 Email Threading

Threading is the ability to display all the emails within a chain of correspondence as a single "thread". In its more sophisticated versions, any missing emails can be "inferred" by their presence in subsequent iterations of the chain, which might influence the collection decisions. The way in which a chain can branch out can also be captured, so that only a small number of emails have to be read in order to gain an understanding of the entire thread.

5.4.3 Automatic Translation

Some programs have the ability to automatically translate a number of common languages. Most can spot that the text is in a foreign language, but the ability to translate is a little less common. No one is suggesting that the translation is of evidential quality, but normally it is enough to enable an initial view to be taken in terms of relevance etc. Practical experience has thrown up one or two issues. The software does not cope well with the presence of two languages in a document, you can get a number of "false positives" with say an English email which has some French words in its address footer, being wrongly categorised as "French". Also sometimes the document is correctly identified as being in a different language, but (if the module for that language is not installed) then it is arbitrarily categorised as some other country. The software vendor in this version of the Guide is Iconic Translation Machines.

5.4.4 Audio / Video Files

A real growth area. This is the ability of certain programs (Intelligent Voice and Nexidia being two market leaders) to index digital audio – including that within video files – as if it was text and then provide functionality enabling you to search in a similar manner. So, if you have an hour of a recording, the software will take you to the 30 second slot, some 45 minutes in, that contains the words "inside dealing". A specialist tool for specialist projects, but an absolute Godsend if you have hundreds of hours of digital material to listen to. Further improvements allow the production of text, so that you can read the conversations rather than listening to them. Intelligent Voice has biometric voiceprint search capabilities, and a standalone review player for each audio file with an embedded navigable transcript, and should be seriously looked at if you have requirements in this area.
5.4.5 Computer/Technology Assisted Review

There is a school of thought that says predictive coding is set to be the most disruptive technology to effect lawyers, why is this so? The technology comes from the United States where the twin pressures of every increasing volumes of electronically stored information (ESI) coupled with a constrained financial environment, means in-house counsel are demanding law firms do more for far less fees. Though its genesis might be American, the changing way of working will have just as much impact over here.

There are a number of slightly different technologies out there, but for the purposes of this section, we will group them all under the single heading of Computer Assisted Review (CAR), with the following core approach at the heart of their products. When faced with a mass of ESI, a well-qualified person (or small number of individuals) are used to "train" the software in identifying which documents are relevant overall, important to specific topics, and (in some cases) Privileged. The training involves reviewing a batch of ESI, normally around 1,000 – 1,500 documents, which has been selected at random from the corpus of the material. The computer processes the results and provides another batch of documents, where it starts to suggest its values for relevance, topic association, etc. The reviewer codes this batch and the computer refines its algorithms, and repeats the process. Normally after five or so batches, the machine is ready to work on its own, and then codes the remainder of the collected material. What happens next depends upon the strategies adopted by the drivers of the CAR.

One possible approach is to select a level below which, the documents might be tentatively relevant, but proportionality would mean they could be discounted, say anything below 50%. At the top end of the coding spectrum, you might decide that any document that is marked between 100 and 80% is relevant and, at this stage, does not need human eyes to confirm what the computer has decided. Where you will spend time and money is reviewing the documents that the CAR process says are between 50 – 80% as these are the more marginal calls that need verification.

Using CAR technology has a number of benefits. Foremost is the significant reduction in time and cost of disclosure review work, with the experience of senior people being used up front where it makes most difference. Some cases studies show savings of over 60% in legal fees and review time.

Next, the process lends itself to a verifiable procedure, you can share samples of the documents in the different bands of relevance with the other side, thus proving the process works, without having to delve into the guts of the CAR logic engine. All studies to date, show that computers are far more consistent and accurate than humans in conducting review work, the silicon chip making no distinction between Monday morning or late on a Friday afternoon. Finally, as this is an IT technology, it is improving at an exponential rate, meaning that next year it will be twice as capable, four times the year after that, and so on. It’s a technology that is here to stay.

Be aware that from the middle to end of 2013 the next generation of CAR products started to appear split into two totally different "camps", on the one side is the more traditional pattern based approach that uses Linguistic Analysis (pattern matching) to train the software, and on the other side are products emerging from all the research on information mining carried out by the US government in the aftermath of the 9/11 terrorist attack. It’s a battle that will run for some time, you just need to be aware that it’s going on when the eager salesperson is in front of you. In 2016, England and Wales obtained judicial approval of CAR with precedents being established in two cases; Pyrrho v MWB [2016] EWHC 256 (Ch) Link here. Brown v BCA Trading [2016] EWHC 1464 (Ch). Link here.
A further ruling on the use (or rather miss-use) of CAR was given in 2018:
Triumph Controls UK Ltd & Anor v Primus International Holding Co & Ors [2018] EWHC 176 (TCC). Link [here](#).

This case has interesting implications as it marks the appearance of the next iteration of CAR / TAR, that is to say continuous active learning (CAL), though as already said, it reflects on the poor use of this approach.

Where used correctly, CAL is a different approach to the previous methodology of CAR / TAR. CAR has one or two subject matter experts review document to train the system in an iterative process that might take a number of batches and period of days to arrive a workable "engine". CAL start with a group of reviewers working on documents, and "learns" from document number one onwards as to what is relevant and what isn't. The reviewers still need to be properly supervised and the correct QC controls applied, but you can arrive a trained "engine" faster than the CAR approach. The Triumph case shows what can go wrong if the review process isn't correctly supervised, but when the technology is used correctly it can be faster than the CAR / TAR approach.

Chris Dale has an informative article on the use of CAL [here](#).

As with all the advanced functionality mentioned in this Guide, this is an area where you need to discuss options with your supplier.

### 5.4.6 Collection of data from Social Media environments

As electronically stored information proliferates into different areas, so the ability to collect it from within those environments becomes more urgent. Various vendors are developing tools (or buying up companies that have done the development) to enable them to hook into LinkedIn, Facebook, Twitter, Yammer, et al and extract information in a meaningful way. Again, the need for this functionality will depend on the area the matter is within, but increasingly data stored in social media is becoming important in more and more cases.

### 5.4.7 Small Quantities of ESI

See Section 6.7 below. This is a constant requirement that comes through every size of procurement and articulates the real need for users to "just read the emails". The key problem is that information is passed to lawyers in electronic format, yet (for very good reasons as far as the IT department is concerned) they are not allowed to use the firm's environment to review it. So, they are sat there with a PST of a small number of email, an email with 50 or so Word attachments, or a thumb drive with a couple of thousand items and they "just want to read them". Providing a quick and easy solution to this requirement will be a real game changer for the various suppliers.

A number of products have come and gone in this space, See the vendor and software chapter for more details.

### 5.4.8 Charging Model

Just as lawyers are coming under increasing pressure on prices, so vendors are being stressed by their clients. The default model is that people will charge you by volume, so much per GB at various stages of the process. Increasingly users are looking for a fixed price solution so they have clarity of costs to pass on to their clients. In response to this, some vendors are offering a "managed solution" option that guarantees fixed pricing for users, irrespective of individual case volumes.

See Section 6.1 for more discussion on this.

### 5.4.9 Redaction tools for "Native" Formats

A bit of a specialist requirement, but one that could be significant if you really, really need it. What we are talking about here is the ability to redact (that is blank out the
offending text, and remove it from all search capabilities) areas within things such as Word, Excel and PowerPoint documents. Normally this involves a cumbersome process of turning the "native" item into a PDF version and then redacting the PDF, but for things such as Excel spreadsheets this is not very workable. A number of vendors are now starting to supply toolkits that let you redact within the "Native" mode. However, if you have Privileged information within a note on an Excel spreadsheet and the opposition has convinced the judge that you must supply the document in its original Native mode, this could be a lifesaver. My normal rule of thumb is that some 0.2% of documents in a collection end up being redacted, and they are Word files to start with, just how crucial the ability to redact Excel spreadsheets really is remains to be seen.

In 2015 The Payne Group produced a redaction tool that allows you to remove material from a native Excel spreadsheet. Other suppliers such as Anexsys (Formally Hobs Legal Docs) also provide Relativity plugins that enable bulk redactions of things such as personal data. Redaction is also now available for audio files and the transcripts produced from them.

As ever look through Chapter 8 for all the products.

5.4.10 Email family groups with non-relevant children

At the heart of this point is what happens when you work with native emails which nowadays is the default situation. Say you have an email with 3 attachments, two of which are deemed relevant to the matter but the third one is not. Within the review platform you will see 4 items, the email and 3 attachments. You code the email and two of the attachments as relevant, and the third attachment as non-relevant. When you carry out the production process, you hand over the original email and two of the attachments in native mode, and keep back the non-relevant item. The problem is that the email in its native mode is a container that holds the email message and the 3 attachments, so you end up handing over the non-relevant item anyway. What will happen when the other side process the load file you give them is that the separate instances of the two attachments will be de-duplicated out against the versions held within the native email, and the non-relevant item will appear in their system.

The potential issue here is what information is contained within the non-relevant item. If its superfluous data with nothing of interest within it, no problem, but what if it’s a document relating to another entity that holds personal or commercially sensitive information?

In this second case, you might make an overall strategic decision to handle the email parent as if it had attachments containing redactions. In these cases, the email is converted to a PDF or Tiff format and exchanged in non-native mode, so that embedded attachments are not handed over.

This topic, will be something your third party supplier will be familiar with, you need to understand the implications of the decisions they will ask you to make. Remember, the default is to exchange in Native format, if you are not doing this you need to explain and agree your approach with the opposing side before the production deadline.

From 2018 onwards, a number of suppliers are storing emails in a .MHT format as opposed to the normal .MSG standard. The big advantage of this is that the .MHT does not include the attachments to the email, thus removing all the issues described above.

Talk to your supplier about what they can offer, for the author, this is a very significant step forward in functionality and its use should be encouraged as much as possible.
5.5 Potential Problems

This sub-Section details some of the more common issues that can be encountered in using litigation support systems. It is not to say that a software package with one of these problems is automatically excluded from your procurement, there are very often workarounds, but you need to know the issues exist so you can factor them in to your evaluation criteria.

5.5.1 Email Groups

**WARNING:** This can cause serious amounts of delay and cost

If there is one single issue you need to be aware of when selecting software, this is it. In the United States it is possible to claim Privilege over an entire email family (that is an email with one or more attachments), this is not the case in the UK and other jurisdictions. However, some of the software packages used to treat the email family as a single entity and did not allow you to split out attachments because they are privileged. This can cause significant overheads at production time and should be an issue you are well aware of when selecting software. Make sure it is a question you ask of the supplier.

5.5.2 Re-unitisation of Images of Paper Documents

Most of the software on offer comes from a background of handling electronic information, emails, Word documents and the like. Now the one thing a piece of Electronically Stored Information (ESI) never does, is change its boundaries, it is what it is. Compare this with scanning, storing and coding paper based images. With the best will in the world there will be time when the images that make up a paper document need to be re-unitised, that is the coding that encompasses say 6 pages, needs now to be split into two sets of coding, one for the first three pages and one for a second document of the last three pages. Not an issue, I hear you say, we will just split up the images in the software and change the coding as needed. This is where you hit the mind-set of the R&D team for ESI based software. They have no concept of the boundaries changing and so have little, or no functionality for re-unitising paper based records. Paradoxically the "ancient" software of Concordance and original Summation could do this with no problems as they came from a paper based background, it is the "new kids on the block" that have problems.

This won't affect you, unless you have significant amounts of paper to process for your disclosure exercise, but if you are in that situation, explore with your vendor partner how they will deal with this.

5.5.3 High level allocation of alias for Names Normalisation

The issue here is the variety of names that appear during collection of emails. Not only do you get people who have different email hosts, so:

Andrew Haslam - eDisclosure Systems - Buyers Guide 2020 Commercial in Confidence V8_1

andrew.haslam@allvision.co.uk, andrew.haslam@gmail.com, andrew.haslam@etc

Also in Outlook you have the option for a "Display as: ", where you can edit the text in the "Display as " field. I like to differentiate between people's personal and work email addresses, so I change the text in the "Display as:" field to reflect this, so the entry with an email address of;

andrew.haslam@allvision.co.uk, could be displayed as Andrew Haslam (Work)

Now when an email is collected, the email address shown is Andrew Haslam (Work) not andrew.haslam@allvision.co.uk.
Also if you are collecting email from within an organisation, you can get the SMTP version of this that has all kinds of letters, brackets and punctuation.

Most Early Data Assessment tools are aware of this issue and will allow you to pick a set of names to search on, so if I was trying to get all emails sent by Andrew Haslam, I could tick the boxes to get all the variants of my name. After a while this gets really boring, particularly when you want to start doing searches of email sent to and from a group of people, each with 4 or more versions of their email address.

What (in the author's humble opinion) is needed if a facility to have a single alias, to which all the variants could be assigned, and then you could far more easily be able to conduct complex searches. From 2014 onwards some products started to incorporate this functionality into their offerings, with edt being one of the early adopters.

Or, you get the vendor to do all the heavy lifting for you, and you just tell them what you want.

5.5.4 Data Collection by Client or Law Firm's IT Department

The short version of this is used to be. Don't Let Them Do It.

The longer version, is that data collection is not a matter of copying an item of ESI. If you don't know what you are doing, when you copy something you can change all the metadata associated with a document. What does this mean in the real world?

In one of the cases I was involved in, one set of clients used to present monthly reports to their board using a PowerPoint slide deck that had Excel spreadsheets underpinning all the graphs. The dispute revolved around actions that had taken place in 2006, so copies had been made by someone (client's IT department, incompetent vendor, some gremlin along the way) of the 2006 PowerPoint shows, sometime in 2010. Except they hadn't been forensically copied, and all of the shows now had a date displayed on the first slide of sometime in 2010, not the original correct 2006 date. So there we were in 2012, coming late to the case, relying on other people's efforts and evidence, and the other side kept demanding we give them the 2006 documents and all we had were "tainted" versions with no way of now collecting the originals.

The proposal to self-collect data normally comes from a client wanting to keep their costs down. My advice used to be to caution against this, but most internal IT departments are now technically competent enough to carry out the process, though you need to make sure they are well aware of the potential dangers before you let them do this. Sometimes in-house IT can cope with most of the collection requirements, but need external assistance with the more exotic forms of data, such as that held on mobile phones, or within structured databases such as accountancy systems, etc.

In close second, comes the lawyer, also keen to cut costs who volunteers their in-house IT team to get the information. In most cases, a law firm's IT department does not have the expertise, the time nor the professional indemnity insurance to be going anywhere near a data collection. Avoid it and get a professional to do the job, then, if it does all go wrong, their insurance can take the hit, not your reputation.

5.5.5 Issues of working in "Native" formats

Most litigation support platform have viewing tools that let you look at Word, Excel and PowerPoint documents without firing up the original software. This is fine for a quick glance, but of no use at all for real review. In a number of the real life cases I've been involved in, the text that makes a document Privileged has been contained in the Track Changes comments in a Word Document. (There's a whole Section's worth here on organisations that hand over Native documents without scrubbing this kind of data, but
that's for another day). Similarly unless you look at the formula's and workings of Excel, how can you begin to understand the purpose of the spreadsheet.

The answer to this used to be that people would offer up PDF versions of the ESI. Nowadays that won't cut it and will be resisted (very strongly) by any half-awake opponent. You need to be aware of the "iceberg" of issues that collecting and review Native data brings, and (at the very least) have protocols built into your review platform so you can see reviewers have downloaded the native document to review it. Plus, that the people doing the review have the technical skills to do things like look in Word Track Changes, or know how to remove the "hide" command in Excel.

A practical point that also occurs with frequency is the case were an email has attachments that contain one or more irrelevant items. If you produce the email to the other side in Native mode, then the email will contain within it, the irrelevant documents. In some cases this doesn’t matter, in others the irrelevant material contains confidential information on organisations or individuals not involved in the litigation. In these instances it is normal practice to produce the email as a multi-page PDF (or as a set of Tiff images), either way as a non-native document.
5.6 Vendor list

The following table shows the main organisations in the UK, grouped under the headings used in the previous Section. It is shown to give a start point for readers to decide whom they wish to reach out to, for demonstrations and/or quotations. A more comprehensive listing of the service providers and their software products is shown in Chapter 8.

The assignment of organisations has been a relatively arbitrary process as some suppliers could lay reasonable claim to being under more than one heading. It has been done purely to try and group like with like, and is no reflection upon competence or suitability to task. It will be up to the Reader to decide what their requirements are, and then to approach the firms that best meet those needs.

A number of organisations provide services across the EDRM model, so just because their forte is in Forensics does not de-bar them from providing a review platform, and vice versa. You need to read the rest of the Guide to work out what your requirements are, and which kind of organisation best meets your needs, or indeed, if you should interview across the range of service providers to get a feel for their relative strengths and weaknesses.

5.7 Software list

Following on from the principles used in the previous Section, shown overleaf is a list of the major software products available within the UK and the organisations that supply them. Again the headings used to group the products are an outline rather than hard and fast differentiations. The aim is to allow readers to identify what products are in a similar category so they are able (as much as possible) to compare like with like.

No endorsement is made or implied for any of these products and their capabilities do evolve relatively quickly, so contact the supplier(s) to find out more.

There are suppliers and products in the Guide which are not shown in these tables, this is because they do not have a UK office. However you might still use their services depending upon the geographic location of your project. The advice, as ever, is read Chapter 8 and evaluate each supplier's offering.

5.8 Relativity "Plugins"

This is a Section introduced in the 2015 edition to showcase the increasing number of companies who provide additional software "plugins" for Relativity. The fact such a Section exists is testimony to the market domination being achieved by Relativity and their products.

What is this all about? In the words of Relativity;

“The Relativity Ecosystem includes best-in-breed integrations and highly customized products that were built by Relativity developer partners and the advice@kCura team. It allows users to pick and choose the solutions that best suit their unique workflows, integrating them to more easily and efficiently transfer data between software packages that serve different stages of the e-discovery process.”

More details here: https://www.kcura.com/relativity/resources/ecosystem/

The following product descriptions are taken from the various organisations' marketing material.

<table>
<thead>
<tr>
<th>Product</th>
<th>Short Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ayfie Inspector</td>
<td>ayfie Inspector is a powerful text analytics suite that lets customers find crucial information within their content. It goes beyond putting together patterns of words or similar names. It puts persons, locations, organizations and time into relation and connects dots that might have been missed otherwise. It presents its findings in a user-friendly interface with data visualizations that make multi-layered data relationships easier to see. It provides a modern way to cull down the massive data sets of today's litigations.</td>
</tr>
<tr>
<td>Anexsys RTK.ExcelRedact</td>
<td>Takes Excel documents of any shape and size and renders them as an interactive webpage which has been designed specifically for redacting Excel spreadsheets.</td>
</tr>
<tr>
<td>RTK.Redact</td>
<td>Enables you to redact a document, and with the click of a button seamlessly propagate these redactions across all instances of a document.</td>
</tr>
<tr>
<td>RTK.Message</td>
<td>Import data from social media sites such as Facebook to Relativity and review them in a user-friendly manner. Reviewers and administrators can quickly filter the message data to remove irrelevant content, and promote only potentially relevant data to the main document review.</td>
</tr>
<tr>
<td>RTK.Loadfile</td>
<td>Transport data in and out of review platforms and easily check for missing data. Users can compare a loadfile against a Relativity workspace to ensure no data is missing. It also splits loadfiles for faster ingestion and helps to comply with the requirements of a production or disclosure specification.</td>
</tr>
<tr>

<tr>
<td>Search Magnifier</td>
<td>Automatically generates and runs multiple searches from the user’s keywords and phrases. It turns a nine-step process into one simple step</td>
</tr>
<tr>
<td>XpressLook</td>
<td>XpressLook extracts raw files, de-duplicates, deNISTs and loads text and metadata into Relativity faster than other tools can ingest the data. It provides in-depth, multi-faceted data analysis, reporting and culling capabilities.</td>
</tr>
<tr>
<td><strong>Intelligent Voice</strong></td>
<td></td>
</tr>
<tr>
<td>SmartTranscript™</td>
<td>Converts an audio or video file into a SmartTranscript™, a Relativity-native, standalone HTML file containing:</td>
</tr>
<tr>
<td></td>
<td>- Searchable, navigable speaker separated transcript text</td>
</tr>
<tr>
<td></td>
<td>- Embedded audio/video file with play, pause and horizontal scrub bar controls</td>
</tr>
<tr>
<td></td>
<td>- A list of suggested topics of interest from the a/v file, which can be used to jump to the part or parts of the audio or video where that term occurs.</td>
</tr>
<tr>
<td><strong>Lighthouse</strong></td>
<td></td>
</tr>
<tr>
<td>ChatSmart</td>
<td>ChatSmart enables the rapid, efficient, and complete review of chat data in many formats, from multiple sources.</td>
</tr>
<tr>
<td>PrivSmart</td>
<td>PrivSmart prioritizes first-pass privilege review and automates privilege log generation by categorizing documents into groups based on their likelihood of being privilege, as well as normalizing privilege log entries automatically.</td>
</tr>
<tr>
<td>RedactSmart</td>
<td>RedactSmart increases speed and consistency with which redactions are applied, using programmable pattern recognition to complete hundreds of redactions in minutes.</td>
</tr>
<tr>
<td>ReviewSmart</td>
<td>ReviewSmart optimizes review through the rapid and efficient disposition of duplicate documents that survive initial family-level deduplication.</td>
</tr>
<tr>
<td><strong>LitSavant</strong></td>
<td></td>
</tr>
<tr>
<td>Conformity Engine</td>
<td>Enables any authorised user to design and implement rules which can be applied to the data entry process.</td>
</tr>
<tr>
<td><strong>Miliyi</strong></td>
<td></td>
</tr>
<tr>
<td>Blackout</td>
<td>Blackout is an assisted redaction tool for Relativity. Streamline your redaction workflow and eliminate the time review attorneys spend applying redactions one-by-one. Simply select the criteria for redaction, the set of documents to review, and the redaction type, and Blackout does the tedious work for you.</td>
</tr>
</tbody>
</table>
## Product Short Description

<table>
<thead>
<tr>
<th>Product</th>
<th>Short Description</th>

</table>
6. PROCUREMENT APPROACH

This Chapter proposes a procurement approach that can be used in selecting vendors. It is anticipated that users might wish to cut and paste text from the chapter into their own documents so the word [CLIENT] has been used to enable a “find and replace” with firm specific details/name.

It provides an analysis of the types of pricing models suppliers might adopt, an overview of the procurement process, and then specific requirements for:

- Scanning.
- Unitisation and Coding Services.
- Data Collection.
- Litigation Support Services.
- Processing small volumes of ESI.

**BEST PRACTICE:** When should I involve a service provider?

As soon as possible in specific cases. Many law firms have been through procurement exercises and set up call off arrangements with a selected litigation support partner. They have an in-built advantage when it comes to eDisclosure.

6.1 Supplier’s Pricing / Client Tactics

The purpose of this Section is provide an overview of the various factors that affect service providers’ pricing so that the reader is better equipped to compare like for like. It is included in the Guide because this is a very difficult area, so be prepared for some work when you obtain quotations.

If the three most important things about buying a house are location, location, location, then the three most important factors about costing eDisclosure projects are volume, volume, volume. That is to say, ESI is notorious for becoming a black hole of ever increasing volumes, and as such it can be difficult to price the work. That being said there are some words of advice that can help.

6.1.1 Involve the supplier as soon as possible

The sooner a service provider knows what the project is about, the quicker they will be able to give you a price, and the more likely they are to be able to give you a more fixed cost. In an ideal world, readers will have selected a preferred supplier, (with a fall back in case of conflicts), familiarised themselves with the software and its capabilities, and have a call-off contract in place with a table of pricing. Failing that, you should at least have 2-3 known suppliers that you can call upon at short notice. If you telephone someone out the blue at 5 o’clock on a Friday afternoon and say you have 200 GB of data that you have to review by Monday, you will get a very different price than if you have pre-prepared the process.

6.1.2 Tell them as much as possible about the case

A good supplier will want to come and talk to you to explore all the aspects of the case; where the data is stored, what technical “gotcha’s” might be lurking in the shadows, any obscure software or products that have known issues (Lotus Notes for example, is a favourite of corporates and has a lot of pitfalls for the unwary). The more they know about the task, the more they can advise you on the best way forwards and the more
flexibility they will have on pricing. Treat them as you would any technical expert. They have a deep range of knowledge, that you need on your side.

6.1.3 Understand the supplier's constraints

Service providers have three main components to their cost base, these are the costs of; storage, software and their professional services.

Storage in the UK is typically charged from between £30 - £50 per GB, per month. Some organisations rent their storage space, and thus are constrained on how much flexibility they have on pricing, others own their environment and thus have more room to manoeuvre. There are still some significant margins in this area, so be prepared to press hard on pricing here, but equally be prepared to divulge how much work you might be putting their way, what’s the average size in ESI terms of your cases, how many litigation cases you do a year, and those kind of things. You do have that information at your fingertips don’t you?

Suppliers that use third party software that they don't own, may have limited room to manoeuvre in terms of pricing. The original supplier of the software sets price boundaries beyond which third parties cannot move. Normally the more volume a bureau puts through a product, the cheaper it is for them, and thus they can pass on the price reductions. This is why it is advisable to run a procurement exercise and establish a call off contract before you find yourself making the Friday 5PM call.

Finally there will always be an element of professional services. The software tools need to be managed, and there is a need for some overall project management. Be aware that when a vendor provides project management, it will not include managing the project from your end (unless you are specifically paying for these services). That normally ends up the role of some hapless junior associate who spends more time being an ad hoc litigation support manager then they do practising law.

6.1.4 Don't keep asking for the "best of three" quotes

Some law firms have a policy of always getting a number of quotes beforehand and then showing the end client that they have got the "Best Price". This is very short sighted and no substitute for a proper procurement exercise. Suppliers get tired very quickly of being asked at short notice for a "quick quote", when they are only given half the facts, put in a lot of effort to provide a professional response, only to miss out on the work. Unsurprisingly they stop replying to law firms who operate in such a manner, meaning that you are limiting your procurement pool to the desperate and/or inexperienced suppliers.

6.1.5 Ask for flexibility in pricing

Once you have built a relationship with a supplier, then you can explore what flexibility they can provide in pricing. Just as the courts and clients are looking to pass risks on to the law firms, so you could be looking to pass some of that onto your litigation support partner. Note the deliberate use of the word partner. You cannot get a good price by ringing round the suppliers and seeing who will give you the cheapest quote for "processing 50 GB".

Service providers are well aware of the implications of the various legal reforms in this area, and should be looking to build relationships with you and give as firm a pricing as they can. The “worst” case should be a straight per GB price, but this is becoming increasingly rare. Vendors have a range of pricing plans they have on offer. Some will
not charge for the data going into the processing stage, only the material that emerges from the other end. Some will offer you a range of options for specific stages, and agree only to charge you the cheapest once the work is done and they can individually price what the components cost them. Some will ask for a retainer and then provide a fixed amount of capacity and processing for that price, which (if you are pushing the limits of the deal) can be good value.

The shorter version is that there are many ways to "skin this cat", ask for them and then work out what suits you best.

6.1.6 Be prepared to do some work in comparing pricing

If the good news is that, there are many options for pricing, then the bad news is that, there are many options for pricing. You need to allocate some time and effort to getting the information and then putting it into a form so that you can compare like with like. It is not a simple matter of ringing three firms and asking them for their price to process 50 GB. You will tend to get three different sets of questions and then three different pricing models. If you haven't set up a preferred vendor arrangement, then the best way to proceed, might be to have an example requirement, that mirrors one of your cases, complete with all the background information and assumptions, then pass that to the vendors so that you can get an idea of their pricing. Be prepared to build and maintain a spreadsheet for this.

You will have sensed by now the common theme running through this section of involving service providers as early and as fully as possible in the case. Try to build a partnership with one of the many competent firms out there and (in the main) you won't go wrong. You will certainly be in a better position than those who don't bother and leave it to the last possible minute.

The rest of this Chapter takes you through how to procure suppliers and software.

6.2 Overall Requirement/Approach

A generic procurement exercise will typically go through the following stages :

- Requirements scoping.
- Match potential vendors to requirement.
- Assess vendor capability.
- Short list.
- Demonstration with real data.
- Establish call off contracts.

NOTE: How much do I really need to do?

As little or as much as you want. The aim is to end up with a preferred supplier, whether for one case or for many. Some law firms have followed a full procurement route taking weeks, others have asked 3 vendors in for demonstrations on one day and made a selection after that. The absolute minimum you must do is look at the software with the people who will support it, if you can use your own data for the demo, even better.

The main considerations for each of these stages are shown in the following sub sections.

6.2.1 Requirements scoping
All "Stakeholders" in the procurement should be interviewed. This not only includes the lawyers/legal staff in the litigation department, but might also embrace the legal teams from other disciplines. It should definitely include the IT department and (if one exists) the print room function. You would be amazed (or perhaps not if you are undertaking a procurement) as to how much stuff is still printed and photocopied.

The firm's accounting system might be examined to see which suppliers are already being paid for services, as well as a firm wide question on which suppliers people have heard about/used, and which they recommend/would never use again.

The aim of the exercise is to distil down the requirements of the various parties into a coherent whole, so that competing products can be assessed in an "apples" for "apples" manner.

One thing that will be needed is an estimate of the volumes of litigation that the firm undertakes. Firms should extract details from the their Practice Management System on the number of new litigation matters created each month, and couple these with estimates on the number of "live" matters, a rough idea of how much each is worth, and how long the cases run for. In this way they will have some idea of the overall scope of their requirement, and also vendors will understand the approximate value of the work they might obtain, and can price their offering accordingly.

6.2.2 Match potential vendors to requirement

The aim here is to select a pool of potential vendors that match the requirement, with the trick being the elimination of those suppliers that do not "fit" the needs or ethos of the firm. This is a two way process, the vendors themselves are selective in their sales qualification process and will only focus on those prospects they have a real chance of winning. If your approach is too wide, you run the risk of alienating the marketplace, and only getting the desperate and the naïve bidding for your work.

6.2.3 Assess vendor capability

Assessing vendor capability can be done in a number of ways. More formal procurements go through a cycle of Request for Information (RFI) to gather market knowledge, followed by a much more detailed Request for Procurement (RFP), which would contain the types of requirements shown the following Sections.

Some firms prefer to go direct to a short list and straight into the formal RFP, whilst others will skip this stage entirely (with some advice) and invite a selected group in for demonstrations.

All approaches are valid, it depends upon the budget for the procurement exercise, the level of formality the firm requires and the scope of the requirements.

6.2.4 Short list

If a more formal RFP (and RFI) has been issued then the response will need to be evaluated, given some form of scoring (with or without weighting, depending upon the firm) and a short list selected. In cases where the circumstances warrant it, firms might move straight to this stage, relying upon their ability to identify which vendors might meet their requirements.

6.2.5 Demonstration with real data

The next stage is key. Firms must evaluate the software they are considering using by means of a demonstration, preferably using the firm's own data, ideally from a real life case, so that the issues with it are known. The panel looking at the products should be consistent across all demonstrations, and feedback should be collated in a managed format, so that personal bias is reduced as much as possible.
References might also be taken up at this stage. Ultimately, however, it is the interaction between end users, the software and (most importantly) the vendor’s staff, that is of greatest significance.

6.2.6 Establish call off contracts

Once vendors have been selected, the call-off contracts with discounted rates should be negotiated. It is better to use the law firms contract as a starting point, though the vendor T&C’s should be examined. The trap to avoid here is the over eager in-house lawyer looking to make up their hours who sees this as an exercise to re-write everything from scratch.

6.3 Scanning

This Section explores the requirements for scanning services, which are mainly commodity items, with some room for added value in terms of the approach to project management and unitisation.

6.3.1 Overall Considerations

It is expected that documents will mainly comprise single sided black and white A4 pages. There might be some colour pages, and document sizes other than A4. These are normally dealt with by an exception process.

The documents will normally be provided from [CLIENT] offices, though occasionally they might need to be collected from clients. The collection and transport of files/documents to and from the supplier will be the responsibility of the supplier.

It is proposed that the scanning work will be carried out at the supplier’s site, however, it is the responsibility of the supplier to meet [CLIENT] security and document-tracking requirements in order for this option to be followed.

An optimal process needs to be identified which will ensure accurate document scanning including physical unitisation at a document level.

The documents to be scanned will normally be provided in banker’s boxes. Within these boxes, the documents will be sub-divided into individual files that vary in size, type and binding.

6.3.2 Example Requirements

The activities to be completed by the selected provider are:

- Document / file preparation.
- Physical unitisation.
- Electronic scanning.
- 100% Quality control.
- Reassembly of documents / files.
- Objective coding and logical unitisation.
- Electronic BATES numbering – post scanning and quality control processing.
- Delivery of single-page tiff images with unitisation and coded information for loading into the litigation support environment.

In order to carry out these activities the provider will need to:

- Enter into a call-off contract with [CLIENT].
- Dedicate the required facilities at their site.
- Resource the required operations.
• Provide an experienced project manager to manage individual projects.
• Provide periodic reporting on project status.
• Manage the project budget to ensure costs are monitored and controlled.

6.3.3 Possible Quotation Format

Please provide pricing for the following items.

Scan, OCR and BATES number 100,000 pages. The pages are contained in 333 files, each file holding 300 pages, estimated 3 pages per document. If charged separately please shown the cost of preparing the pages and then re-constituting the files, and the provision of logical unitisation information.

Please provide the cost for the provision of each of the services shown below. [CLIENT] have "weighted" these costs as an overall percentage of processing 100,000 pages to reflect their real life experience of the frequency of these requirements being needed. For example, roughly 15% of the pages encountered by [CLIENT] also need glasswork copying before they can be scanned, whilst other services occur at even smaller percentages.

The services are:

• Glasswork A4 B/W Scan
• Large Format Scan (i.e. A3 and above)
• A4 Colour Scan
• Glasswork A4 Colour Scan
• Large Format Scan Colour
• Re-Binds (Documents that have to be un-bound before they can be scanned and then reconstituted in a bound state)

Suppliers should also quote for the cost of providing load files, DVD and any project management / professional services surrounding the scanning.

If there are any other costs associated with the provision of scanning services, suppliers should show them in their completed quotations.

A potential layout for a quotation spreadsheet is shown below:
<table>
<thead>
<tr>
<th>Item/Activity</th>
<th>No</th>

**Assumptions**

- Pages / Document: 3
- Pages / File: 300
- Docs / File: 100
- Total Docs: 33,333
- Total Files: 333
6.4 Unitisation and Coding Services

The key consideration within this Section is the decision on whether to objective code ESI items or not.

6.4.1 Overall Considerations

There are advantages in using the firm that conducts the scanning to carry out the coding work, principally the overall control and cost saving that ensue.

The key to keeping prices down is to have the work carried out overseas. Most firms will offer a UK based service, but the cheaper rates come from shipping the work overseas. The service offerings do need to be explored, as some firms conduct their coding work in locations where the speed/quality of the internet connection is so poor, that the data needs to be transferred to that country for the coding work to be carried out. Other firms use organisations in countries where this is not an issue, and the data remains in the UK.

6.4.2 Example Requirements

[CLIENT] require a supplier who will provide objective coding for [both] paper documents [and ESI]. The supplier will provide the environment in which the coding takes place.

[CLIENT] will allow the data required for the objective coding process to reside in an overseas location.

For the paper documents, suppliers will receive physical unitisation information including attachment groups and will apply logical unitisation alongside objective coding.

The following coding fields will be required:

Paper Documents

- Document Title.
- Document Type (taken from a list provided by [CLIENT]).
- Document Date (either taken from document or by deduction from context within the original file.).
- Estimated Date (Yes/No field, if Yes, supplier and [CLIENT] to agree convention used).
- Author.
- Recipient.
- Copyee.

Word efiles

- Document Title.
- Document Date (either taken from document or meta-data).
- Author.
- Recipient.
- Copyee.

Excel and PowerPoint efiles

- Document Title.
- Document Date (either taken from document or meta-data).
Chapter 6 – Procurement Approach

The Author / Recipient / Copyee fields for paper and efiles should show the name(s) and organisation(s) in brackets as shown below.

e.g. Andrew Haslam [Allvision Computing], Fred Smith [Client PLC].

A process of names normalisation will need to be carried out.

It is assumed that the document type data for all efiles will provided as a bulk update in the export process, i.e. all Word efiles will have a document type of “Word”.

In order to carry out these activities the provider will need to:

- Enter into a call-off contract with [CLIENT]
- Dedicate the required facilities at their site.
- Resource the required operations.
- Provide an experienced project manager to manage individual projects.
- Provide periodic reporting on project status.
- Manage the project budget to ensure costs are monitored and controlled.

6.5 Data Collection

The skills required to provide forensic services are very specialised, and take time to acquire. Therefore the firms operating in this area tend to be relatively small, even when the team itself is part of a large organisation such as the forensic groups of the big consultancy firms. It has been known for clients to form working relationships with specific individuals in the forensic world and remain "loyal" to that individual even when they change the organisation they work for.

6.5.1 Overall Considerations

There are two main types of data collection:

- Forensic services, such as imaging hard drives, copying data in a forensically sound manner (for example in fraud cases) or retrieval of deleted information.
- Data collection in accordance with the guidelines embodied in the Electronic Data Questionnaire.

6.5.2 Example Requirements

The services to be provided by the selected supplier should include:

- Forensically sound imaging of individual PC's, laptops, Apple Macs.
- Provision of a "data map" describing where the ESI is located throughout the client's IT infrastructure.
- Collection of selected ESI from client's infrastructure.
- Remote collection of selected ESI for overseas clients either by hardware or software based solutions.
- Sound knowledge of the data protection requirements in various countries.
- Support to [CLIENT] in exploring the collection of ESI from external devices such as pen drives, mobile phones, external hard drives, etc.
- Support to [CLIENT] in exploring the possible collection of ESI from on-line applications such as email systems or social networking software.
- Processing of back-up tapes.

In order to carry out these activities the provider will need to:
Chapter 6 – Procurement Approach

- Enter into a call-off contract with [CLIENT]
- Dedicate the required facilities at their site.
- Resource the required operations.
- Provide an experienced project manager to manage individual projects.
- Provide periodic reporting on project status.
- Manage the project budget to ensure costs are monitored and controlled.

6.6 Litigation Support Services

This Section is the main focus of the Guide and contains a significant amount of detail.

6.6.1 Overall Considerations

The following list of requirements is an extensive one. It is intended that users of this Guide will select those requirements that meet their needs and shape their procurement accordingly. The initial approach should be to determine what tools are available within the marketplace, and what their functionality might be. Vendors should not be disqualified from the selection process if they cannot supply some of the more advanced requirements, indeed users might not have need of that functionality for some time to come.

6.6.2 Example Requirements

The services to be provided by the selected supplier include:

- Provision of processing facilities to enable de-duplication and filtering of data.
- Processing of Outlook, Lotus Notes and GroupWise email files.
- Any visualisation of the connections between data custodians.
- Processing, display and review of family groups of ESI files.
- Processing, display and review of scanned and coded documents.
- Ability to display information across dual screens.
- Provision of OCR from imported image files.
- Ability to store, display, search and review PDF files.
- Handling of foreign language based ESI.
- Near-duplication.
- Concept clustering / searching.
- Any other analytics functionality.
- Email threading.
- Predictive / Technology Assisted / Computer Assisted coding.
- Handling of digital audio files.
- Automatic translation of foreign language ESI.
- Provision of objective and subjective coding (including issue/hot topic) fields.
- Full search capabilities, including Boolean logic, saved searches and dynamic search update.
- Disclosure production capabilities, including BATES numbering, production of Privilege and Trade Secret lists, mass burning to external media.
Chapter 6 – Procurement Approach

- Production of a courtroom bundle.
- Strategy for meeting the demands of “tablet” based computing.

In order to carry out these activities the provider will need to:

- Enter into a call-off contract with [CLIENT].
- Dedicate the required facilities at their site.
- Resource the required operations.
- Provide an experienced project manager to manage individual projects.
- Provide periodic reporting on project status.
- Manage the project budget to ensure costs are monitored and controlled.

6.7 Processing small volumes of ESI

Most firms have a need to “just read the emails” and this Section attempts to articulate that requirement.

6.7.1 Overall Considerations

A requirement has been identified to provide a mechanism whereby users in the firm can review relatively small amounts of electronic information. A classic scenario, is that a client will ask for an evaluation of a potential matter, often on the assumption, that they will either not be charged for this initial evaluation, or it will be a nominal fee. This need is not limited to the litigators in a firm, most lawyers/legal staff receive information in an electronic form and wish to quickly examine it. The issue is that it is difficult, if not impossible, to put this data into the firms in-house systems, as the IT department actively discourages ephemeral client data being added into the sanitised, backed-up, secure environment they provide for the lawyer’s use.

The broad outline of the proposed approach is as follows:

- Vendors provide a solution with specific boundaries in terms of size of data, number of users and timeframe with a low price attached. For example, up to 500 MB of data, with one person looking at it, for one month at £50-100/month up to a maximum of 3 months.
- There is some form of easy to use mechanism whereby the Client information, PST file, email attachments, USB stick can be securely transferred to the vendor.
- The vendor loads the data into their litigation support environment without any additional processing and stores it under a client/matter reference.

6.7.2 Example Requirements

The services to be provided by the selected supplier will include:

- Provision of means to securely transfer the data between [CLIENT] and the supplier, probably using a secure file transfer mechanism known as ”secure FTP”.
- Loading of email and electronic files into the selected product in a speedy manner, (the aim will be an overnight service).
- Provision of tools to allow the initial reading and analysis of documents.
- Provision of review tools to meet the needs of a "quick peek" scenario.
- A well-defined route to export the data so that it can be processed and loaded into the "full blown" litigation support tool.
• Very competitive pricing.

In order to carry out these activities the provider will need to:

• Enter into a call-off contract with [CLIENT]
• Dedicate the required facilities at their site.
• Resource the required operations.
• Provide an experienced project manager to manage individual projects.
• Provide periodic reporting on project status.
• Manage the project budget to ensure costs are monitored and controlled.
6.8 Schematic of Generic Requirements

Increasing Complexity / Size of case

- Small Volumes of Emails & ESI
- Paper Files
- Forensic Services
- ESI Files
- Very Large / Complex Case

Email Quick Review = (Vendor A Name & Contact Tel)
Forensic Services & ESI Collection = Vendor C
Scan/OCR
Collect & Process Data
Early Data Assessment (Optional)

Email Quick Review
Objectives Coding
Litigation Support System
Disclosable Material
Trial Bundle

Collect & Process Data
Litigation Support System

Large/Complex = Vendor F

LPO
Clients
Barristers
Expert Witnesses
Opposing Parties
Trial Parties

Early Data Assessment = Vendor D
Litigation Support System = Vendor E

Email Quick Review = (Vendor A Name & Contact Tel)
Scanning & Objective Coding = Vendor B
6.9 Summary

This Chapter has provided users with the information for them to undertake a procurement exercise. As with all such exercises, the key to a successful project is a clear understanding of what the requirements are, and how best they might be met. Various potential requirements are shown, so that a selection can be made of the ones that best meet the user's needs. Once that framework is in place, and a shortlist of potential suppliers identified, then the proposed software solutions must be evaluated by means of a demonstration to a representative panel, preferably using the firm's own data.
7. ADDITIONAL RESOURCES

This Chapter provides a list of additional resources for users to refer to. It is not exhaustive and feedback on any additions is welcomed.

7.1 Legal IT Insider

The Legal IT Insider is the leading media, information and communications organisation in legal IT. More details here:
http://www.legaltechnology.com/

7.2 The e-Disclosure Information Project

The e-Disclosure Information Project is run by Chris Dale, a former commercial litigation partner turned e-Disclosure consultant. The Project aims to bring together lawyers, suppliers, courts and corporations with an interest in electronic disclosure, and to disseminate information about the court rules, the problems and the software and services available to handle them. It has an excellent resources section here.

7.3 The BONG! Emails (Jonathan Maas)

Jonathan Maas from Maas Consulting provides, in his words, an "informal, occasional and personal selection of recent international eDisclosure/eDiscovery/legal IT/data protection/interesting news/articles" via his BONG! emails (named after the headlines on the main evening TV news in the UK, on which headlines are read out between strikes (bongs) of Big Ben). To find out more, or to subscribe, please contact Jonathan on Jonathan@MaasConsultingGroup.com.

7.4 Clive Freedman (eDisclosure web site)

Clive Freedman maintains a website relating to electronic disclosure (mainly from an English perspective).

Clive is a Barrister of 3 Verulam Buildings, Gray’s Inn, London, England. He was a member of the Working Party chaired by Senior Master Whitaker which was set up by the Civil Procedure Rule Committee, and which prepared drafts of Civil Procedure Rules Practice Direction 31B and the Electronic Documents Questionnaire. He also contributed to the TeCSA eDisclosure Protocol for use in the TCC.

The website can be found here. Note that from September 2018 onwards this became a static resource and is not being updated as Clive is focusing on his GDPR website.

7.5 Civil Evidence for Practitioners

The fourth edition of "Civil Evidence for Practitioners" written by Professor Peter Hibbert, published by Sweet & Maxwell, is now out, with chapters in eDisclosure making significant use of the TCC protocol and its supporting material, find it here.

7.6 Electronic Disclosure – Law and Practice

This book by Michael Wheater and Charles Raffin from Hardwicke Chambers provides exactly what it says in the title. Though a pilot of proposed changes to CPR will take place in 2019/20, there is much still in this book to warrant a read. In their own words:

- A detailed guide to the complex issues surrounding eDisclosure presented in an accessible and user-friendly format
- The first work of its kind to offer comprehensive analysis of the developing law on electronic disclosure combined with practical advice focusing on electronic disclosure and related document production in practice; a complex and fast-growing area of evidence gathering and review
• A fully up to date examination of the relevant procedural guidelines and case-law in this area

7.7 The 2018 eDiscovery Buyers Guide (US Focus)

In their own words:

“Legal technology professionals Brett Burney and Chelsey Lambert have released the 2018 eDiscovery Buyers Guide - a shopper’s handbook and educational resource for solo to mid-sized law firms. The Guide was designed to serve as a shopper’s handbook for solo to mid-sized law firms in search of options that fit their budget and average case size. Free to download, the e-book is divided into the primary product and service categories seen in the litigation support process which includes hosted solutions, SaaS platforms, social media evidence capture, service providers, utilities and more.

7.8 The TCC eDisclosure Protocol

During 2013, the author was part of a Working Group charged with producing an eDisclosure protocol for use within the Technology and Construction Court. The protocol pack, and all the materials used in the training about the approach, can be found at the link shown below.

http://www.tecsa.org.uk/e-disclosure

The timeline from the pack is shown overleaf and overlays the legal process with the EDRM model.

7.9 The ILTA eDisclosure data exchange Protocol

During 2018/19 the author was part of a working group from the UK ILTA litigation support Special Interest Group (SIG) that produced a best practice data exchange protocol and associated guidelines. The driving reason for this project was the fact that the previously mentioned disclosure pilot as set out in Practice Direction 51U, now in force in many UK civil courts, requires completion of a Disclosure Review Document. Among other things, the DRD requires parties to agree how they will transfer information between them in the disclosure process.

The matters to be agreed are set out in Section 3 of Appendix 2 to the Practice Direction, and specifically in paragraphs 6 (7) – (11). The aim of the ILTA protocol is to address those requirements and provide information and education on the factors to be considered in the guidelines.

The protocol incorporates feedback from a number of eDisclosure suppliers and is endorsed by many more, as well as being used by various law firms. You can see all those involved in the project and download the documents from the ILTA website.
7.10 The TCC Legal/EDRM Timeline
8. SUPPLIER & SOFTWARE DETAILS

This Chapter contains information provided by suppliers, albeit moderated by Andrew Haslam. See Annex B for the form used to provide feedback. Any omissions or corrections will be addressed in the next version of the Guide, please send material to Andrew in a Word format at:

andrew.haslam@allvision.co.uk

The information is in alphabetical order.

Suppliers have been asked to provide the following:

- A brief (half a page maximum) synoptic description of themselves and their services.
- A listing of the software they use.
- A brief (half a page maximum) synoptic description of the software they provide.
- Contact details for anyone to approach them.

In the interests of brevity, the information is split into suppliers and software, with the software each supplier uses, merely listed in the supplier section, and a fuller description given in the software part of the Chapter. For example a number of vendors use the software package Relativity. This is described once in the software Section, and mentioned a number of times in the various supplier's descriptions.

8.1 Suppliers

The following pages show information provided by suppliers. It is mainly UK based, but some organisations from other jurisdictions have asked to be included, so are within the pages.
8.1.1 7Safe, a PA Group Company (Last updated 2019)

Abby Muir

www.7Safe.com

Company Description

7Safe provides configurable, cost effective eDiscovery, cyber incident response and digital forensic services to law firms and General Counsel. We were founded in 2002 and acquired by the global Management Consultancy, PA Consulting Group, in 2011.

Our approach to eDiscovery is unique

7Safe will always:

- ensure that you find our eDiscovery services simple to use
- provide you with clear quotes for any eDiscovery matter
- use our technical forensic skills during the collection, preservation and processing of data
- accept complex challenges where innovation & adaptability are necessary to manage the risk and cost

We have many years of experience in providing eDiscovery solutions

7Safe uses a distinctive blend of highly-experienced digital forensics, IT infrastructure and information management professionals to continually refine and deliver our eDiscovery services. This ensures that our clients have access to the latest thinking and technologies to support their eDiscovery and legal needs. A popular service for new clients includes:

   Assisted DSARs: Our quick-to-use and fixed-price, data subject access request service is an easy way for you to comply within 30 days to any size DSAR. Our experts have the understanding to guide you on how to best manage the request, and data is provided to us through our secure online portal removing the need for you to handle, prepare and host the data on your own systems.

Clients use 7Safe to help manage and control their global information challenges for litigation, regulation, investigation and arbitration matters. We are qualified experts in ensuring that electronic information is optimised for your investigation. Information Security is also now of paramount importance; 7Safe is one of the only firms that specialises in this field and makes us suitably placed to advise on, control and to protect your data.

We are also an approved supplier on the Crown Commercial Services eDisclosure services framework open to all public sector customers.

http://ccs-agreements.cabinetoffice.gov.uk/contracts/rm3717

7Safe’s eDiscovery services will provide you with confidence

Our services all offer:

- Transparency – clients knowing why we are doing what we are doing
- Visibility – clients see what we are doing at all times
- Shared Commercial Risk – 7Safe appreciates and understands the complexities of eDiscovery and are willing to share the risk with our clients.
We share knowledge & expertise at all stages of the disclosure process

Our people are all experienced in bridging the communication gap between legal, IT, project managers and other stakeholders. They are fully conversant with the end-to-end processes and the pitfalls of complex projects including legal holds, dealing with custodians for data collections, processing, document review, predictive coding and production. We use methods developed in the computer forensics industry to ensure that your matter is legally defensible from start to finish.

Vendor Offerings

Our eDiscovery services are always individually configured for each specific client matter

We use the best technology in the most appropriate way. Technology alone is not the answer, which is why we always work closely with you to ensure the technology is matched to the goals, resources and methods of each project:

- **the most suited technology** – we regularly review the market for the latest technologies to ensure we are offering the best functional and commercially viable applications. This process has kept us committed to Nuix (processing) and Relativity (document review and predictive coding).

- **information handling expertise always on hand** – all our consultants are all information engineers who will manage and operate all elements of your matter from start to finish. This ensures continuity and detailed understanding of the case so as to remove any delays or service hold-ups. Our lead eDiscovery consultants are qualified Relativity Certified Administrators (RCA).

- **focused outcomes & delivery management** - irrespective of technology or technical skill, service remains the core of our trading ability, reputation and our industry standing. 7Safe’s blend of investing in project delivery to achieve a great outcome is the very heart of what we stand for.

7Safe eDiscovery services

7Safe provides a premium end-to-end eDiscovery service, including:

- **Preservation & Collection** – 7Safe is proud to have partnered with the former ACPO E-Crime Working Group and Metropolitan Police Service in the authoring and publication of the Good Practice Guide for Digital Evidence. ([https://www.7safe.com/research-and-insight/acpo-guidelines](https://www.7safe.com/research-and-insight/acpo-guidelines)) and retains very advanced digital forensics skills. We are skilled at collecting and preserving data from all unusual devices through to retrieving backups from the “cloud”

- **Early Case Assessment** – in close collaboration with our clients, we focus a combination of price, speed and intelligence into generating early case visibility using our own unique tools and processes to provide early focus and help in the early stages of a case. This includes our social media intelligence capability which provides commercial insight and market intelligence extremely quickly

- **Processing** – our focus always is the price point and speed selection balance. Our Nuix data processing capability runs at industry leading speed, therefore giving you high quality results can be achieved fast and at minimal cost. If time is not an issue, then we have more cost effective solutions for dispute teams working to tight budgets

- **Technology Assisted Review** - we configure our workflow processes and algorithms together with you to best suit your matter and achieve the very best outcome using such predictive technologies

- **Document Review Platform** - a secure, fast, enterprise Relativity platform designed to support many thousands of users
**Air-Gapped, On-Site Solutions** – when legislative or privacy matters drive the specific location of data, we can deploy solutions to ensure total control over where data is processed and reviewed.

**Cyber Incident Response, Digital forensics and investigations**

7Safe also has a leading cyber incident response and digital forensics team who can help you with cyber incidents together with digital forensic investigations. Services include:

- Cyber Security Incident Response* and Threat Hunting (*CREST Accredited)
- Digital forensic analysis and investigation
- Forensic data collection
- Evidential reports and expert witness services
- Incident response and forensic capability development

**Security Assurance and Testing**

Underpinning all of the above, is our absolute focus on Information Security. We are ISO27001 certified and members of Institute of Information Security Professionals (IISP).

**Training and Professional Development**

We also provide industry recognised technical training courses that have been accredited by both CREST and IISP. ([https://www.7safe.com/professional-development](https://www.7safe.com/professional-development))

**Information Management Advice**

Together, 7Safe and PA have a long established record of helping large global organisations organise their information better. A core part of our work with our clients is to help keep the cost of future eDiscovery down, as well as implementing workable records management policies, processes and IT to reduce exposure to litigation and regulatory penalties by advising on:

- European General Data Protection Regulation (GDPR)
- Information governance & architecture
- Records management, including Legal Hold processes
- Data retention & protection.
8.1.2 AccessData (US)

Lori Tyler, Vice President of Global Marketing
ltyl@accessdata.com | +1 480 361 3513
588 West 400 South, Suite 350, Lindon, UT 84042, USA
www.accessdata.com

Company Description
Whether it’s for investigation, litigation or compliance, AccessData® offers industry-leading solutions that put the power of forensics in your hands. For more than 30 years, AccessData has worked with more than 130,000 customers in law enforcement, government agencies, corporations and law firms around the world, providing both stand-alone and enterprise-class solutions that can synergistically work together. The company is backed by Sorenson Capital, a leading private equity firm focused on high-growth portfolios. For more information on AccessData, please go to www.accessdata.com.

Vendor Offerings
AccessData is a digital forensics software company, serving the global public sector markets, corporations, law firms and service providers for the purposes of investigations, e-discovery, legal review, post breach analysis and compliance.

CORPORATIONS
Today’s corporations are dealing with enormous amounts of digital data, all being shared among teams, departments, global locations, and devices. Even in industries as varied as healthcare to finance to energy, enterprises need to manage digital investigations, cyber risk and e-discovery faster, more efficiently and more securely, while reducing cost. Additionally, it’s critical to have a global view while applying standards to data activity. Varying data privacy regulations, as well as regional risks and communication practices, must all be taken into consideration to ensure data security and improved efficiency. Finding tools to help you create the appropriate balance between collecting relevant evidence for investigations and maintaining privacy rights should be priority number one.

PUBLIC SECTOR
Along with the perennial challenge of cash-strapped budgets, public sector organizations today are grappling with increased backlog from growing, more complex caseloads. More than ever, it’s critical that teams can zero in on relevant evidence fast, and build cases to fight fraud and other crimes endemic to government and the public sector. What’s needed are tools to locate and analyze data often unavailable through conventional processes, allowing examiners and investigators to collect key evidence quickly and with confidence.

LAW FIRMS
More and more, law firms want to better serve their clients by simplifying their e-discovery processes and reducing costs. This can be a tough challenge with today’s caseloads where millions of documents and terabytes of data are commonplace. To make e-discovery more efficient, you need access to integrated tools for processing, review, and case organization. And you need a real-time review platform that allows secure collaboration, regardless of where any member of the litigation team is located.

SERVICE PROVIDERS
Multinational service providers, consultants, and accounting organizations have unique business challenges that cut across the corporate and legal world. Like law firms, service providers need to be able to carry out complex e-discovery projects. They’re also expected to provide expert support for international compliance efforts.
As such, there’s an urgent need for tools that can support globally dispersed investigatory teams and real-time collaboration. And as with large enterprises, service providers need to balance evidence collection and privacy rights.
### AlixPartners

**Becky James**  
**rjames@alixpartners.com** | **+44 207 332 5051**  
**6 New Street Square, London EC4A 3BF**  
**www.alixpartners.com**

#### Company Description

AlixPartners is a global advisory firm with approximately 2,500 consultants in 30 locations world-wide. Founded in 1981, AlixPartners advises global firms facing high-risk disputes and investigations, as well challenging situations in the context of corporate restructurings and operational improvement.

Our Legal Technology team includes over 100 consultants in various cities in the United States, the United Kingdom, Germany, Buenos Aires, Tokyo, Seoul, Hong Kong, and Shanghai. Our team collaborates across regions, delivering forensic accounting, valuation, and information management services. We also provide expert services on matters ranging from cyber security to competition economics. Many our team have testified as expert witnesses.

Our e-discovery practice follows the firm’s overall approach by optimising our capabilities for high-profile matters with cross-border scope. Our global team follows standardised procedures to reduce risk and deliver consistently across the globe. Having grown organically since the founding of our practice in 2002, AlixPartners merged with Evidence Exchange in 2015, and added a development team based in Argentina, increasing our capacity to over 100 consultants focused on e-discovery, legal technology and computer forensics.

Our growth is premised on the following principles:

(a) Screening our consultants equally on their expertise and commitment to building a highly effective team;

(b) A service delivery culture that emphasises accuracy, responsiveness, and accountability;

(c) Investment in a high-performance data management infrastructure;

(d) Deploying leading software platforms; and

(e) Developing software where the market does not offer suitable solutions.

#### Vendor Offerings

**Overview**

AlixPartners’ Legal Technology team advises clients on every aspect of data management in litigation and investigations including: information governance, data preservation, forensic analysis, data collection, data processing, database hosting, disclosure management, and claims management.

Additionally, we provide secure data rooms for corporate mergers, acquisition, divestitures, and reorganisations.

**Discovery Management**

With respect to electronic disclosure, we advise legal teams to help them make sound decisions about the various aspects of data management and review. For example, we provide forecasts, detailed cost estimates, and tracking of expenditures against budget on a weekly basis.
Using a combination of custom reporting, early case assessment, technology assisted review, and other means as appropriate, we encourage legal teams to leverage text analytics to safely accelerate review, whilst reducing overall cost. At the end of the disclosure process, these tools are equally valuable to validate disclosure sets and avoid inadvertent disclosures.

In relation to structured data, our approach is driven by our expertise in analytics, which emphasizes the following capabilities:

(a) Advise clients on the means to extract data from corporate systems such as mainframes, SAP or Oracle, as well as proprietary databases;

(b) Identify relationships between data sets, including structured and unstructured data sources, and consolidate related information into a single platform;

(c) Assess the means to visualise information so that the investigation team can directly query and interact with complex data sets.

**Software**

We continually evaluate technology platforms to determine which can improve our ability to deliver for our clients. Currently we offer Relativity for document management and Brainspace for analytics and predictive coding. For data processing we use Mindseye, Nuix, and Relativity.

Where we identify a gap in the software market we develop our own platforms, which in recent years has been focused on data assurance and analytics functions. We also offer a variety of options for machine translation services.

**Document review**

When needed we can assist law firms and corporate counsel with the provision of review teams, blending paralegals, qualified lawyers, and forensic accountants to conduct thorough investigations. In most cases the cost of such reviews is mitigated by the extensive use of predictive analytics.
### 8.1.4 **Altlaw**

<table>

</tbody>
</table>

**Company Description**

Altlaw are the UK’s leading independent electronic discovery service provider, offering specialised products and services, coupled with proven and defensible techniques and expertise.

Founded in 2004, Altlaw has been working with law firms and in-house counsel to dramatically speed up the process of identifying, reviewing and managing relevant data files.

Our focus is to provide techniques and processes which allow our clients to make better-informed decisions at the earliest possible stage in the litigation procedure.

Our mission is to help our clients save money by reducing document populations and making review more efficient.

**Vendor Offerings**

**eDiscovery Solutions:**

Electronically Stored Information is a crucial litigation and investigation asset. Our expertise, combined with leading-edge technology, allows us to identify and manage data throughout the litigation life cycle.

**Forensic Data Collection**

Once Electronically Stored Data is identified and located, it must be extracted in a way which preserves its forensically-defensible integrity, including all Metadata. This can identify the author and time of creation along with its edit history. Inadvertently spoiling the potential evidence trail is an easy problem to create; however our world-wide deployable experts have the experience and knowledge to advise on, and recover data intact for disclosure in litigation, compliance and other investigations, backed up with full Chain of Custody and a defensible expert witness statement.

**Our technology partners**

Altlaw partners with industry-leading technologies which enable us to process and host huge volumes of data. Our clients have access to three recognised and renowned industry leading litigation platforms.

- Nuix
- RelativityOne
### 8.1.5 Alvarez & Marsal

**Phil Beckett, Managing Director**

| pbeckett@alvarezandmarsal.com | +44 20 7663 0778 |
| One Finsbury Circus, London, EC2M 7EB |
| www.alvarezandmarsal.co.uk |

**Company Description**

Alvarez & Marsal (A&M) is a global professional services firm specialising in turnaround and interim management, performance improvement and business advisory services. A&M delivers specialist operational, consulting and industry expertise to management and investors seeking to accelerate performance, overcome challenges and maximise value across the corporate and investment lifecycles. The firm is known for its distinctive heritage, hands-on approach and relentless focus on execution and results.

A&M was founded in 1983 when Tony Alvarez II and Bryan Marsal recognised the opportunity to provide radically different advice and hands-on support to organisations facing operational and financial hurdles – situations demanding action, objectivity and real results. Committed to its core values, A&M has since evolved from a boutique player to a leading global professional services firm, setting the standard for working with organisations to solve complex problems, boost operating performance and maximise value for stakeholders. Our more than 4,000 professionals spanning across 61 offices located in North America, Europe, the Middle East, Asia and Latin America, constitute a diverse group of seasoned experts.

Our team of seasoned experts and dispute specialists provide end-to-end advisory services across investigation and litigation lifecycles, in context of anti-bribery and corruption, anti-cartel, regulatory inquiries, complex financial disputes, accounting irregularities, M&A disputes, security breaches, intellectual property theft, employment disputes and other general frauds. A&M’s professionals includes:

- Forensic technologists;
- Digital investigators;
- Structured data analysis specialists;
- Cyber security specialists;
- Forensic accountants;
- Former industry executives;
- Former regulators;
- Former law enforcement officers;
- PhD economists;
- Banking and securities professionals;
- Certified Fraud Examiners;
- Chartered Financial Analysts; and
- Information governance professionals.

### Vendor Offerings

A&M’s Forensic Technology professionals are located in major cities around the world and we have datacentres strategically placed in major cities in the U.S., U.K., Germany, Switzerland, Dubai, Hong Kong and mainland China so that we can deploy our expertise at a moment’s notice and accommodate jurisdictional data regulations.

Our Forensic Technology Services practice provides repeatable, auditable and proven solutions by combining our operational experience with innovative, legally prudent procedures and the “appropriate” technology.
This allows A&M to deliver rapid response to requests for electronic information; accurate results with fewer surprises; and reduction in costs by elimination of unnecessary efforts.

Our core competencies within our Forensic Technology Services practice stretch across the information lifecycle, with specialisation in the management, extraction, analysis and presentation of vast volumes and complexities of electronic information.

A&M’s collaborative approach to discovery management involves working alongside outside counsel, the clients’ internal team and other professionals to deliver a comprehensive solution, combining advanced technology and expert advisory services to deliver strategic value.

A&M is tool-agnostic and continuously assess the leading tools in the industry that will best complement A&M’s methodologies. Additionally, we are enthusiastic about customising our workflow according to the requirements from the client and establishing maximum efficiency and high quality. To this affect, we utilise a combination of third-party software and internally developed tools as appropriate. Some of the third-party tools currently utilised within A&M include EnCase, FTK, Blacklight, LAW, Nuix, eDiscovery Platform, and Relativity, in addition to other workflow management, support and reporting platforms.

We regularly support large scale electronic document review exercises across multiple review platforms and regions, but some of our highlight credentials include:

- kCura Premium Hosting Partner with 10+ years Relativity support.
- 20+ dedicated review managers, between 7 and 12 years Relativity experience (including certified RCA’s, Experts and Masters), strategically located throughout the US, Europe and Asia.
- Over 300 individual Relativity workspaces supported with more than 80M documents hosted - largest workspace has over 18M documents.
- Extensive experience in deployment of efficient review work flows incorporating advanced analytics features, including email threading, near-duplicate identification, Continuous Active Learning (CAL) and Technology-Assisted Review (TAR).
- Multiple self-developed custom platform workflows, applications, objects and advanced field deployments, including participant and domain parsing and categorisation tools, advanced Pivot-based analytics, and redaction propagation.
- Hosted and mobile review platform deployment and support globally.
8.1.6 Anexsys

Rob Crowley

rob.crowley@anexsys.com |
+44 (0) 20 3217 0300

58 Farringdon Road, London, EC1R 3BP

www.anexsys.com

Company Description

Since 2004, we have consistently delivered high level eDiscovery and litigation support services to law firms, corporations and public sector clients. Our team of over 50 permanent staff operate from offices in London, Manchester and Bristol.

We provide support throughout the lifecycle of a case or investigation from pre-action all the way through to trial. Our team of eDiscovery experts help clients navigate disclosure exercises with market leading technologies, including Relativity, Brainspace and Nuix. We are not limited to off the shelf eDiscovery solutions and we are capable of creating and combining new technologies.

We differ from the majority of eDiscovery providers thanks to our in house software development team, who build bespoke applications for Relativity and standalone applications. We can adapt Relativity to a client’s specific requirements, extending its standard functionality. We have developed solutions to assist with standard document redaction, redaction of Excel documents and the review of message and social media data.

We provide a complete litigation support package with our technical consultancy services complemented by an experienced reprographics team who provide hard copy support.

We are part of the Crown Commercial Service eDisclosure Services framework, trusted to handle HM Government data at the highest levels of security.

Vendor Offerings

Managed Document - Anexsys Lens

Anexsys Lens is our barrister-led document review service which operates from dedicated offices in central London. We have a track record of delivering accurate and time sensitive document review projects for litigation, public inquiries and data subject access requests. We work with clients to create strategic workflows that ensure defensible accuracy and quality control. Our methodology is pragmatic and is aimed at preventing the costs of document review spiralling out of control.

Entity

Entity is a cloud native document review platform created by Anexsys. It simplifies document review exercises for lawyers, providing a simple intuitive review experience created to help lawyers undertake large scale review exercises with ease. Using Entity, clients can preview, highlight, annotate and easily link or cross reference their documents.

Additionally, Entity includes a range of cloud native and custom built document solutions such as machine translation, audio transcription, detection of personal information and automated redactions.

Relativity & Relativity One

We provide both on premise and cloud versions of Relativity to private and public sector clients. Both of our Relativity offerings are enhanced by our custom built Relativity applications. Our principal custom applications for Relativity and Relativity One are set out below:
RTK Excel Redact allows clients to redact and manipulate native versions of Excel documents within Relativity. This is particularly useful for banking litigation clients who often need to review and redact thousands of Excel documents as part of a disclosure exercise. Using RTK Excel Redact we create formulas for clients so that they can mass redact multiple Excel files in one go.

RTK Redact allows clients to automatically find and redact keywords, saving them countless hours of manual redaction. We have recently adapted RTK Redact to enable the identification and automatic redaction of personal information, which is particularly useful for data subject access requests. RTK Redact also enables users to automatically apply redactions made to one copy of a document to all of its duplicates.

RTK Message is used to view data from messenger and social media applications such as Facebook and WhatsApp within Relativity and in a user-friendly manner. Using RTK Message, reviewers can quickly filter the message data to remove irrelevant content and concentrate on the messages relevant to their case.

Relativity Managed Services
We provide a managed service for clients in the private and public sectors with their own instance of Relativity. Our managed service includes technical support, environment and infrastructure management and the implementation and maintenance of third-party applications and integrations for Relativity. Our managed service clients range from top 15 corporate law firms to public bodies requiring highly secure isolated environments.

Digital Forensics
Our forensic experts routinely carry out forensic imaging of laptops, mobile devices and enterprise content management systems. They assist clients both on site and remotely, guiding them through collections step by step to ensure all data preservation requirements are met.

Our forensic investigators interrogate devices, prepare expert evidence for civil and criminal proceedings and regularly appear in Court as expert witnesses.

Hard Copy Support
Our reprographics team undertakes document printing services. They also undertake large scale scanning and coding projects, enabling the digitisation of hard copy documents.

Trial Preparation
We assist with the preparation of trial bundles, in both electronic and hard copy form. We can manage the transfer of data from disclosure platforms to trial presentation software such as Opus 2 Magnum.

Brainspace
We provide clients with Brainspace, a data analytics platform for litigation and investigations. Brainspace allows clients to identify key evidence faster through data visualisations and augmented intelligence solutions. Brainspace is particularly helpful for early case assessment where clients are seeking to identify key issues early in proceedings.

Intelligent Voice
We have partnered with Intelligent Voice to integrate their software into Relativity. Intelligent Voice helps law firms and governments around the world ingest, transcribe, analyse and review vast amounts of audio, in a secure environment, freeing up valuable lawyer time and cutting down on costs.
8.1.7 Ankura Consulting

Jon Fowler  
jon.fowler@ankura.com | +44 (0) 20 7015 8848
Level 2, 55 Bishopsgate, London, EC2N 3AS
http://www.ankura.com

Company Description
Ankura is a global business advisory and expert services firm with a global footprint across the US, Middle East and Asia. We have 1,400 employees in over 30 offices worldwide. Ankura provides a range of services in the following areas: Construction Disputes & Advisory; Disputes & Economics; Strategy & Performance; Turnaround & Restructuring; Forensics, Risk & Compliance and Data & Technology.

Whether a client is facing an immediate challenge to its business, trying to opportunistically increase the value of their company, or protect against future risks, Ankura designs, develops, and executes tailored solutions by assembling the right combination of expertise.

Our senior-level advisors have provided valuable insights in all types of situations – from government issues to complex business challenges to legal proceedings. In each case, we have worked with our clients to deliver measurable and meaningful results that have moved law firms, corporations, governments, and non-profit organizations in a positive direction.

We build on this experience with every case, every client and every situation, collaborating to create innovative, customized solutions, and strategies designed for today’s ever-changing business environment.

This gives our firm unparalleled insight and experience across a wide range of economic, governance, and regulatory challenges. When concerns arise, we have the expertise, knowledge, and experience to guide you through the turbulence back to stability.

Vendor Offerings
Our Data and Technology team are experts and advisors in complex data risk management, handling critical risk issues across an organisations data enterprise. Providing support and guidance on our client’s most challenging data issues. We tailor our services to support our client’s requirements across a variety of matter sizes and types. Our team of eDiscovery, digital forensic and Cyber & information security advisors provide consulting expertise and end-to-end project management across the full information lifecycle. Our consultants work collaboratively with clients to identify, contain and analyse issues and design efficient workflows to proactively identify and mitigate risk. Our eDiscovery and digital forensics advisory team has significant experience with a broad range of industry-standard technologies and procedures. We apply quality control checkpoints, solve technological challenges, and provide cost-effective solutions. Our professionals have served in some of the largest and most globally recognised eDiscovery investigations. For every unique engagement, we carefully customise our approach to ensure an efficient and well-planned deployment of resources and technology. Our Cyber Information Security and Incident Response team have a proven track record in handling incidents worldwide, with ability to isolate the root cause through remote support or team deployment. Our reactive experience includes, ransomware facilitation, malware and business email compromise analysis and recovery services. Our proactive capabilities include deep offensive security testing, including red teaming, pci assurance, cyber strategy and transformation, privacy/GDPR support, critical national infrastructure and security architecture. We also have the ability help...
businesses with board level cyber strategy through table top risk assessments. When data incidents give rise to legal claims, our disputes experts guide the parties and their representatives through challenges such as e-disclosure and the analysis of evidence served in the proceedings. Our professionals have served as expert witnesses on technical matters related to liability and questions arising in the assessment of quantum.

**Electronic Disclosure** - Ankura delivers unique and powerful capabilities in the most critical phases of e-disclosure. Utilising industry-leading, intuitive, and user-friendly web-based interfaces we equip clients with the best tools so that they are productive immediately with minimal training. Our solutions seamlessly integrate with Ankura’s collection process and allow us to consolidate all processing, analysis, review, and production tools into whichever platform is being used. These tools can be hosted in our data centres in the US, EU, or Asia, as well as deployed on-premise behind the firewall.

**Processing** – Mindseye Discovery Platform, Intelligent Voice®

**Early Case Assessment** – Brainspace™, NexLP Story Engine, Ayfie

**Review** – Relativity®, Veritas™ eDiscovery (formerly Clearwell), Reveal™ InControl™, CS DISCO™

**Customised Relativity®** – Our offering of Relativity includes proprietary review windows supporting audio and chat room formats. These are designed to maximise the efficiency of review teams when compared to many other implementations of Relativity.

**Reveal™ InControl™** – Our offering of InControl allows us to instantly and effectively create data centres anywhere in the world via an Amazon Web Service. Minimising hardware and other costs for our clients, ensuring true scalability and reliability.

**CS DISCO™** – Our offering of DISCO provides data processing, hosting, ECA and analytics all accessible from a secure Amazon Web Services’ platform. This structure allows us to control cost whilst giving access to DISCO’s clean and intuitive user interface with fully customisable workflows, views and security.

**Advanced Analytics** - Ankura’s extensive experience with advanced analytical technologies have provided our clients with creative implementation strategies that help establish the facts of the case quickly and enhance the quality of review whilst lowering the cost. Key analytical features include: email thread identification, topic clustering, near-duplicate detection and participant, file, and term analytics. Ankura embeds Early Case Assessment (ECA), predictive analytics and technology assisted review (TAR) functionality directly within our review environments. A predictive coding process that uses statistical validation can help demonstrate to the court and the opposition that the process is thorough and effective.

**Brainspace™** - A powerful ECA and analytics tool that allows users to dig deep into their data sets from the time data is loaded throughout the lifetime of the project. Brainspace™ provides visualisation around conceptual clustering, data timelines, communication analysis and other metadata so that users can easily interrogate and quickly understand their large datasets.

**NexLP Story Engine™** – NexLP’s Story Engine™ utilises AI and machine learning to derive insights from a myriad of data types to deliver operational efficiencies for legal, corporate and compliance teams. Combining concept clustering, communications and sentiment analysis, Story Engine allows you derive fast insights from your data in any situation from a dispute to proactive risk management.

**Ayfie™** - Ayfie Inspector is a powerful text analyser that helps you find information within your content more efficiently. Fully integrated with Relativity, it goes far
beyond putting together patterns of words or similar names. Inspector connects
activities, places, things and time. Ayfie Inspector can automatically identify and
extract over 180 types of PII, making it invaluable in today’s data privacy climate.

**Analytics** - Our own proprietary predictive coding tool that seamlessly integrates with
Relativity, but also acts as a standalone environment. Developed in-house and
maintained by machine learning experts, has been used on a large variety of client
projects to help prioritise and quickly find the relevant data. The platform uses
statistical models for data mining and predictive coding and is backed by experts
who have successfully run defensible projects. The process can be performed
iteratively, where results are repeatedly fed back into the system to further refine
and enhance the effectiveness of the model. On one client engagement, Predict was
able to reduce the number of documents requiring review by over 90%, thereby
reducing cost significantly.

**Image Analytics** – Ankura’s image analytics tool brings supervised and unsupervised
machine learning to image files. Initially developed for the construction industry,
Ankura’s proprietary technology brings processes that have traditionally been
exclusive to text content, to pictures. Utilising this technology similar pictures can be
grouped together, or the system can be trained to retrieve specific types of pictures,
saving many hours of manual review time.

**Structured Data Discovery** - Ankura also deliver strategic business solutions for
clients requiring in-depth analysis of large, disparate sets of financial, operational,
and transactional data. Ankura uses leading edge technologies and proven
methodologies to identify, acquire, and transform massive amounts of complex and
diverse information into workable databases. These tools allow for the development
of new approaches to assessing and prioritising what is relevant when managing
critical cases and issues. Ankura offers the collection, modelling and analysis of the
content of databases (e.g. General Ledgers, accounting, HR systems, supply chain
/ logistics systems, Accounts Payable, CRM systems, customer transactions, etc.).

Ankura has the critical combination of Business, Legal Process and IT expertise to
bridge the gap between the key players. Ankura has a team of statisticians, data
modellers and visualisation experts to help client get the best insights from the
underlying data. For this purpose, Ankura uses visualisation tools such as Tableau
and has capabilities to host real-time visualisations that can be accessed from
mobiles, tablets, laptop and desktops.

**Intelligent Voice®** – Using the latest voice recognition software, Intelligent Voice®
allows the efficient transcription and analytics of audio data. It allows users to identify
themes and concepts in otherwise non-searchable data. Using a continuous active
learning algorithm, the software can teach itself different dialects to capture more
accurate information. Using Intelligent Voice®, it is also possible to make audio files
keyword searchable within a review platform, allowing a more targeted review of
audio data files.

**Digital Forensics** - Ankura’s experts are skilled at interrogating a vast range of
devices including complex enterprise networks, personal computers and mobile
devices to identify relevant intelligence and evidence quickly, accurately and cost
effectively. Ankura’s professionals possess a unique blend of skills to help clients
formulate their strategy, understand their position and deliver answers efficiently.
Ankura adopts an agnostic approach to utilising market leading tools to ensure
complete success with forensic collections and would analyse which tool is the best
and most efficient fit for the client’s needs and requirements. Ankura will provide
detailed reasons and explanations for tool selection so that the client fully
understands the service being provided to them. Ankura can intelligently interrogate
data to meet specific client requirements which includes recovery of deleted
material, analysis of artefacts and identification of malicious applications and/or
data. Ankura will create a deliverable that is easy to comprehend and understand, be it witness statements, affidavits or expert reports.

**Information and Cyber Security** – Ankura’s Cyber Security services cover the full spectrum of cyber response, from proactive assessments and hardening of security defences to reactive breach investigations. We are a preferred forensic partner with most leading global cyber insurance companies with clients in banking, utility, retail and legal sectors and investigated over 1000 breaches last year. This gives the team an in-depth perspective on cyber security matters which we leverage in our Cyber Intelligence 360 programme; akin to an MRI scan of an organisation’s cyber security health. We can typically be on site in any global location within 24 hours. We also leverage industry technology partnerships to deploy software across the affected network and begin the remote containment and analysis of an incident within hours of being notified.

**Data Privacy and Compliance Services (GDPR)** - Ankura has expert industry experience in helping clients to operationalise the GDPR utilising a 55-point compliance framework. Ankura’s experts help create a variety of procedures to achieve compliance, including incident response plans, subject access requests procedures, and record retention plans. Implementing these policies and practices to address the challenges posed by GDPR provides tangible and long-lasting benefits that extend well beyond regulatory compliance: in creating up-to-date records on privacy policies, data, risks, and IT controls, organizations will likely see improvements in storage management, business continuity planning, and risk mitigation, as well as an overall reduction in their information security threat profile. Clear data classification and typing also enables better disaster recovery and business continuity planning. Such investments toward GDPR compliance can therefore produce multiple benefits and companies that embrace this process may very well find that they have a broader global advantage in the not-too-distant future.

Company Description

Aon’s Cyber Solutions dedicated Investigations & Response team (formerly Stroz Friedberg) specialises in complex investigations with leading experts in digital forensics; cyber incident and data breach response; internal investigations; eDiscovery; intellectual property; compliance technology, threat intelligence, vulnerability assessments, and due diligence.

We have supported some of the most sensitive regulatory, internal and cyber investigations, and have a proven track record of working closely with our clients to dramatically reduce investigation timelines, deliver sound and actionable findings, and deliver substantial cost savings to businesses and legal advisors.

Our key ingredient is the combination of our diverse skill sets and expertise all working together to deliver on your most complex cyber challenges across the entire cyber risk value chain. We are the go-to firm for organisations and their law firms in investigating ninety percent of the highest profile breaches in the last decade, including serving Fortune 100 companies, 80% of the AmLaw 100, and the Top 20 UK law firms. Vendor Offerings

How can we help you to reach a successful outcome with Discovery and Disclosure?

Core eDiscovery Services: Our eDiscovery service offerings go beyond standard processing, analysis and production services, bringing our ingrained investigative and analytical approach to solving any data interrogation or disclosure requirement. Our problem-solving approach and goal-oriented eDiscovery & Disclosure workflows are designed to meet the needs of any matter, defensibility and proportionately. We show our clients time and time again that scoping and targeting the right data sooner in the process results in huge reductions in effort and review costs later. We provide proactive guidance and leverage the newest technologies and smart approaches to generate meaningful information early on and reduce volumes along every step of the workflow.

Consulting & Subject Matter Experts: Providing advice and guidance throughout the process is routine, not the exception. Our experts can help in countless ways - from guidance with negotiating an efficient disclosure plan; building an efficient and defensible cross-border workflow; designing a “proof of concept” exercise for a unique inquiry; advising on internal investigation approaches; document authentication including analysing produced documents to find evidence tampering or defending against claims of tampering; and all the way to helping validate and defend the final results of your review.

Technology-Assisted Review & Machine Learning: Our tools and workflows make full use of “TAR 2.0” technologies, such as continuous, active, and multi-modal learning, that are language-agnostic. We have the ability to apply powerful machine
learning to handle real-world challenges like internal investigations and lines of inquiry; apply early intelligence to subsequent case developments and rolling collections; and effectively reuse existing attorney decisions on relevance, private or privileged information, and cull clearly irrelevant material up front.

**Digital Forensics, Preservation & Collections:** We are leaders in the field of digital forensics and help shape best practices on digital investigations and risk management and are recognised industry experts. We are credentialed in network, database, mobile device, and other forms of digital forensics; malicious code and other types of malware; computer fraud and abuse; and data discovery, analytics, and disclosure.

**Expert Services:** Recognized in the field, our experts have been certified in multiple jurisdictions around the world and are regularly seen as the “go-to” firm for expert witness testimony, formal reporting to law enforcement, and critical technical advisory support in regulatory inquiries and enforcement actions. Our expert witnesses are worldwide leaders in the areas of cybercrime and digital forensics who are credentialed, published, and certified, with years of experience pursuing complex cases alongside accomplished lawyers. Our witnesses provide testimony on the validity of the forensic data, the reliability of chain of custody, and our findings and forensic analysis. We deliver expert evidence and stand up to cross-examination. We also act as a court’s independent expert in forensic investigations and electronic discovery/disclosure matters.

**Intelligence & Investigations:** Our team help our clients with identifying the risks that they are exposed to, as well as open-source intelligence to assist in a fact investigation and help generate relevant lines of inquiry for an investigation or dispute situations. With this information our clients can make better-informed decisions about case strategy or responding to an incident.

**Data Breach Support:** Whether caused by bad leavers, internal bad actors, state sponsored organizations, hackers, or by accident, data breaches are an everyday threat and top concern. We give you a quick-acting team of incident responders who will help to deliver less damage, and ultimately less reputational and financial fallout. They will contain the incident while preserving evidence, screen exposed data for personal data using sophisticated software and search methods to help ensure you meet data privacy law reporting requirements, and confidently communicate with your stakeholders.

**Global Locations:** We can host data in our highly secure data centres in the UK and the US. Our technology supports foreign languages and our support teams include native speakers in local languages.

**Enterprise Advisory Services:** Building on our core expertise and experience in eDiscovery, Investigations, and Response, we regularly advise our law firm and corporate clients through a range of complimentary services designed to reduce their critical information risks including:

- Cyber Security Assessment, Test and Advisory Services
- Cyber Incident Response – in the event of a cyber incident or personal data breach

**Proactive Cyber Risk Assessments** – including Threat Intelligence Review & Monitoring, Individual & Entity Vulnerability Assessments, Cyber Threat Hunting, and Compromise Assessments

- Information Governance Consulting – supporting clients to develop and mature corporate information governance programs
Managed Services Consulting - Our managed services engagements provide consulting services on a broad spectrum of issues covering cyber risk, eDiscovery and beyond.

Solutions

Defensible Collection: Whether for litigation or an investigation, whether forensic, targeted, or even covert, we can handle it and make sure it’s done right.

Intelligent Data Culling: We apply tested methodologies to help quickly identify and set aside objective irrelevant or low-priority data early in the process, minimising “false positives” and allowing matter teams to focus on the most interesting and important material.

NOMAD Portable Discovery & Disclosure: Our self-contained appliance that is deployable anywhere in the world. No matter the size, location, or complexity of the matter, NOMAD provides clients with a secure, powerful, and flexible system for sensitive investigations and electronic discovery/disclosure projects.

Multiple Language Support: Includes machine translation, language identification, multilanguage entity extraction and tokenization, native language search and review, and full support for multi-byte character sets throughout the process.

Cross-Border Workflows, including Privacy Analysis & Redaction: Leverage capabilities in multiple jurisdictions and expert consulting to design workflows that reduce risk and comply with data protection requirements (including analytics and sampling to help identify at-risk data; streamline review; and automate redactions)

Processing

Our processing solutions, Nuix and Relativity, handle the most challenging data volumes and types.

Brainspace™ Analytics

Our analytics options help lawyers winnow data and prioritize key documents for litigation and investigation. Brainspace™ Analytics helps you quickly explore, and cull large data sets with powerful visual analytics, concept search, query expansion, clustering, and communications network analysis. Brainspace Advanced Document Classification supports continuous multi-model learning (TAR 2.0) as well as traditional Predictive Coding (TAR 1.0) workflows. Our teams are certified in each of the applications named above and have multiple years of experience in both typical litigation exercises and more targeted investigations.

Review

Aon’s Cyber Solutions supports Relativity to provide native review, enhanced search, near duplicate identification, concept clustering, and multiple reporting options.

Company Description

Arkus is a niche consultancy and expert services firm with experience advising clients on projects globally.

Our founders and colleagues have worked in some of the most demanding and highest quality environments in the industry, including magic circle law firms and top tier forensic technology and eDiscovery consulting firms. We have dedicated our careers to ensuring that our clients receive the right outcome whatever the scenario.

Throughout our significant experience, we have worked across a diverse range of industry sectors. We have delivered solutions for clients involved in some of the highest profile, high pressure and time-sensitive matters which have arisen in the industry over the past 15 years.

Combining this unique skill set and experience with a true affinity for client service and a deep technical capability sets Arkus apart from our competition. Being truly and sincerely consultancy-led, our teams form collaborative partnerships with clients across the lifecycle of a matter. We leverage this experience to support clients throughout the lifecycle of an eDiscovery exercise, from initial identification of potentially relevant data, through to expert witness services at trial.

Clarity and detail at a forensic level is at the core of everything we do.

Vendor Offerings

Forensic Data Collection & Analysis

Our experts have worked on some of the largest, most sensitive and highest profile data collections the industry has seen to date. From our fully remote forensic imaging capability, to in-situ targeted collections, we work collaboratively with our clients to devise and execute the most appropriate, efficient and defensible data collection strategy.

Wherever and whatever data is required for collection, we have the tools and capabilities to do so.

eDiscovery Services

Arkus are experts in enabling clients to manage an eDiscovery exercise quickly and efficiently. The bespoke and collaborative approach implemented by Arkus puts clients and their legal teams in the driving seat, whilst being able to leverage our significant industry experience.

Every eDiscovery exercise is different, and so we always aim to use the most appropriate platform for each. Our team has expert capabilities in both Nuix Discover and Relativity.
The Arkus team has many years’ experience at the forefront of some of the industry’s most sensitive and complex eDiscovery matters. These have included complex global investigations and some of the world’s largest inter-jurisdictional litigations and arbitrations. We tirelessly work with you to ensure you reach the right outcome, no matter how complex the environment.

**Managed Document Review**

Matters arise where there is just too much documentation to review within a short timeframe and our clients may not have the personnel available to conduct the review.

The Arkus team have significant experience in sourcing and managing highly experienced subject matter experts; often with a specific foreign language skill. Our team has managed document review matters ranging from small, isolated internal investigations for private companies, to large dedicated inter-jurisdictional review rooms.

An efficiently managed document review process will allow your legal team to better and more quickly understand the data within a large and diverse data set. With stringent requirements and robust management of an outsourced or insourced review team, clients have the confidence of being able to rely on a review team which can be considered an extension of the legal team working on the matter.

**Data Analytics**

Our team has many years’ practical experience collaborating on and delivering eDiscovery projects which have leveraged Court-accepted analytics tools and approaches. Arkus is at the forefront of these technologies, including AI and Continuous Active Learning. We provide these solutions in both Nuix Discover and Relativity platforms.

**Bespoke Software and Solution Development**

Our teams have significant experience in helping clients address specific data problems through a bespoke design and build process. Clients ranging from law firms, accountancy practices and consulting firms have benefitted from Arkus’ solutions across a wide range of issues within many different industries. Many of these solutions have been directly integrated into the Nuix Discover or Relativity platform to greatly increase clients’ capabilities and effectiveness. Arkus can also deploy secure standalone bespoke web applications to resolve specific data or eDiscovery issues.

**Data Subject Access Requests (DSARs)**

In recent years there have been changes to legislation that place a greater emphasis on the rights of individuals with regards to ownership of data. This shift has resulted in a significant increase in the number of Data Subject Access Requests that organisations are fielding on a regular basis.

Often organisations are responding to these requests by manually retrieving, reviewing and redacting documents. Arkus can build streamlined and repeatable workflows to automate large parts of this process.

This, in conjunction with providing the right technology can significantly reduce the time required to complete these types of requests.
eDiscovery On Premises

While Arkus fully embraces cloud, we also understand that there are occasions where geography or data privacy dictate that an on-premise eDiscovery appliance is necessary.

The Arkus team are able to draw on years of experience of scoping, building and supplying these appliances. This experience enables our clients to quickly establish a robust and defensible eDiscovery solution in a self-contained package.

Data Breach Response

In situations where clients suspect they have been the victim of a data breach, our team are able to deploy anywhere in the world to identify, secure and analyse any data sources that may have been compromised and answer these key questions:
- How did the breach occur?
- What data sources did the attackers gain access to?
- What PII may have been exposed by the breach?

We also partner with carefully selected vendors to offer on-going penetration testing services and provide defence and mitigation advice.

Expert Witness Services

Arkus’ forensic analysts have provided expert evidence in support of many high profile civil and criminal matters. Whether giving testimony to UK courts and tribunals, US regulators or other overseas bodies, Arkus has the ability to support clients’ cases through to trial.
### 8.1.10 ayfie Group AS (US)

</table>

#### Company Description

ayfie offers search and text analytics solutions that bring structure to unstructured data. Its extensive feature set combines AI with more than 30 years of expertise in linguistics, computational linguistics and computer science to extract meaning from text. Professionals across the legal, finance, healthcare and media industries use ayfie’s powerful text analytics engine to efficiently identify critical insights, conduct smart search and power business intelligence solutions.

#### Vendor Offerings

ayfie Inspector brings powerful new capabilities to eDiscovery platforms like Relativity® by providing a modern and defensible approach to exploring and culling the data sets of today's litigation, investigation and compliance reviews. ayfie’s linguistics-based feature engineering is a critical differentiation that provides immediate insight into vast amounts of text-based content via extraction of key elements which can be rapidly filtered.

Leveraging aided intelligence, ayfie immediately identifies redundant information through familiar workflows including email threading for inclusive materials and accurate near-dupe analysis. Most importantly, ayfie adds intuitive data querying to explore massive data sets with ease. ayfie Inspector drives immediate results during fact finding and throughout the life of the matter.

</tbody>
</table>

#### Company Description

BDO, the fifth largest professional services network, has more than 1,800 offices in 167 countries. Our UK business is a limited liability partnership operating from 20 offices nationwide.

BDO provides a range of professional services, including:

- **Audit and Assurance**
- **Tax**
- **Forensic Accounting**
- **Forensic Technology**
- **Business Restructuring**
- **Technology Risk Assurance**
- **Business Valuations**
- **Business Services and Outsourcing**

BDO is known for its excellence in service across all practice areas and jurisdictions. Our highly resourced teams leverage expertise and best practice solutions from our global network, allowing us to offer our clients state-of-the-art technology in a cost and time effective manner.

#### Vendor Offerings

BDO has dedicated and highly skilled Forensic Technology and Risk Advisory teams, experienced in providing professional advice and handling differing volumes of data from a variety of sources across multiple jurisdictions.

Central to our practice is our multidisciplinary team of experienced staff. Our skills and expertise encompass disclosure, computer forensics, data analytics and social media analysis.

Our service offering includes:

- Data profiling and scoping and custodian interviews;
- Digital forensics: data collection, file extraction & analysis, investigations and expert witness testimony;
- Data processing and early case assessment;
- Manipulation and analysis of structured data
- Information governance and regulatory compliance consultancy including GDPR;
- Litigation readiness: data profiling and mapping, legal hold program planning and implementation, eDisclosure readiness assessments, corporate eDisclosure program development;
- Cyber security: threat and vulnerability intelligence services, security compliance services, information and cyber security strategy services, security improvement planning, security incident response services;
- Social network intelligence analysis;
- Electronic disclosure: strategy and workflow development, data migration oversight, project management, document review management services, search validation, technology assisted review, post review quality assurance, production;
- BDO Leverage: advanced data analysis, pre-collection analytics, pre-review planning, review optimisation;
- Expert witness services; and
- Managed services.

Our software tools include:

**Forensic Collection and Analysis: EnCase and FTK**
EnCase and FTK are two of the leading computer forensic suites, regularly used in criminal investigations and both having a track record in court acceptance. These tools are utilised for forensic data collection, processing and analysis. They are used by BDO to recover deleted data, complete comprehensive investigations with disk-level forensic analysis and authenticate metadata, while maintaining the integrity of the evidence. BDO’s forensic technology team includes qualified EnCase Certified Examiners with expert witness experience.

**Forensic Collection and Analysis of Mobile Devices: UFED**
Cellebrite’s UFED solution is used for the preservation and investigation of data stored on mobile devices such as mobile phones, portable GPS devices and tablets.

**Encryption Handling: Passware and Password Recovery Toolkit**
Passware and Password Recovery Toolkit (PRTK) are applications used to recover protected files/devices using various methods including rainbow tables, brute-force and dictionary attacks.

**Data Processing: Nuix eDiscovery Workstation**
Nuix is the market leading, complete and scalable solution for processing, investigation, analysis, review, and production. Nuix directly indexes virtually all forms of unstructured information, in any language. It can process complex proprietary formats such as Lotus Notes, Microsoft Exchange, Microsoft SharePoint, webmail and forensic images. Nuix technology identifies and makes searchable the information other software routinely skips. Nuix rapidly processes and analyses data in a way that is forensically preserved and defensible, and is used by many of the world’s major regulators, including the Financial Conduct Authority and Serious Fraud Office (UK), European Commission (Europe), Securities and Exchange Commission (United States) and Competition Commission (Singapore).

**Review Platform: Relativity**
BDO is a premium partner with Relativity, offering the Relativity platform hosted in one of our purpose-built data centres, as well as being a RelativityOne Certified Partner. Relativity is a powerful, proven platform which can handle large volumes of data. The flexibility inherent in the tool, and the ability to implement custom workflows, allow BDO’s Relativity Certified Masters and Administrators to tailor the solution to each individual matter and address complex requirements. Relativity also
provides analytics functionality which can be used to thread emails so as to cull duplicative content from review, identify textual duplicates/near duplicates, group conceptually similar documents, identify foreign language content and employ technology-assisted review; using your coding decisions to make decisions on remaining documents backed by defensible statistics.

**Unstructured Data Analytics: Brainspace**

Brainspace is a text analytics tool which is powered by patented machine learning allowing you to interrogate your dataset using visual representations. Brainspace combines powerful concept searching, communications analysis and predictive coding within a single, intuitive interface. Brainspace allows you to find the facts in your data faster, prioritising your review for the most important documents and intelligently culling irrelevant documents.

**Structured Data Analytics: MindBridge and BDO Advantage**

Through the application of artificial intelligence, the MindBridge engine uncovers material irregularities in data that are caused by human error, or by intent. Using the MindBridge system, organisations across multiple industries can minimise financial loss, reduce corporate liability and enhance their professional judgment.

BDO Advantage is our proprietary tool for analysing structured data. The application incorporates a financial analyser which ingests and analyses general ledger data, as well as supplier and customer analysers. Ingestion has been automated for data sourced from the most common accounting applications including Sage, SAP, Microsoft Dynamics NAV, SunSystems and Oracle. Standard tests can be applied to detect anomalous or high-risk transactions, and a visualised interface allows the user to interact directly with the data to perform their own tests/analyses.

**Translation Services: Park IP**

Park IP Translations have developed a unique API plug-in technology that enables access to Park IP’s machine and human translation resources directly from the Relativity platform. This allows case teams to conduct earlier first pass review of foreign language documents with English-speaking reviewers via your existing eDisclosure process; workflows are virtually uninterrupted.

Depending upon translation requirements, document translations can be produced and delivered immediately. All translated text is automatically delivered back to the Relativity platform and mapped to the source location. From “gist” translation, for relevancy determination, to high quality human translation for critical case documents, the process is simplified and costs are drastically reduced.

**Audio Processing: Intelligent Voice**

High speed audio and video processing using speech to text and phonetic search, Intelligent Voice allows you to effectively search and cull voice data and add the responsive data directly into your review platform. BDO has successfully employed Intelligent Voice in a foreign language matter involving industry-specific vocabulary using the tool’s model building functionality.
8.1.14 **blu Eye GmbH (A blu Group company)**

**Company Description**

Established in 2012, **blu Eye GmbH**, part of the **blu Gruppe AG**, is a single-source provider of **INVESTIGATIVE TECHNOLOGY SERVICES & SOLUTIONS**, specialized in IT Governance, Risk & Compliance (GRC).

**blu** Eye core competencies comprise of **IT / OT & SW Asset Management, Computer Forensic** (eDiscovery) and Endpoint Security.

In support of its services, **blu Eye** employs an extensive network of associated, **globally recognized technology partners** to enable an efficient, consistent, accurate and expedited review of electronically stored information (ESI).

**blu** Eye seasoned management team from the BIG4 audit firms and large technology vendors, has years of experience in multinational projects.

As a premium partner of market leading IT GRC application vendors, **blu Eye** provides software licensing and technical implementation and integration services as well as operational support and offer several **solutions as a managed service** (i.e. eDisclosure, IT Regulatory Compliance & Security-a-a-S), combined with its independent GRC consultancy.

**blu** Eye, inter alia is the European partner for the industry leading **Endpoint Discovery, Interrogation & Compliance Management Automation Software, HCL BigFix**.

**Blu Fix**

**blu** Eye applies best practices, industry guidelines and standards in a pragmatic, collaborative and hands-on approach that takes its customers corporate culture into account.

**blu** Eye services are tailored to client’s project requirements at **flexible pricing models**.

**Company Description**

**Get the Right Answers Faster with the World's Most Advanced Data Analytics Platform**

Brainspace is the most comprehensive and advanced data analytics platform for investigations, eDiscovery, intelligence mining, and compliance. Our patented technology is specifically designed to enable you to accelerate the process of identifying what matters. Harness the power of the industry's leading Augmented Intelligence solution to quickly surface data insights while reducing an organization’s legal risk. Here’s a brief overview of Brainspace’s key features.

**Vendor Offerings**

Brainspace's software learns from unstructured information — human language — and turns it into a visual presentation. People can use the visual presentations to find patterns in language use, such as identifying phrases and words often used together or individuals that communicate frequently with one another. The software can process and analyze 1 million documents in about 45 minutes.

Data is one of your organizations most precious assets. But with its continued exponential growth and the constantly evolving landscape of new content sharing applications, how can you effectively mine your data to reduce your firm’s legal risk or analyze it for actionable intelligence? Experts estimate that by 2025, governments, corporations and individuals will have accumulated 175 zettabytes of data. That means your organization's data is growing at an annual compound rate of approximately 60%. You need to cut through this data overload with an intuitive artificial intelligence solution that easily combines human expertise with interactive data visualizations and machine learning to accelerate the identification of what matters. Brainspace is a powerful yet practical artificial intelligence solution that enables you to make smarter, faster and more informed data decisions. Our software provides a unique and patented approach to data analysis. Brainspace dramatically increases the speed and efficiency by which you analyze data across a number of different use cases. Whether your responding to a legal matter, analyzing data for compliance or simply mining your organization's data for actionable intelligence, Brainspace can improve your team's efficiency by as much as 90%. The intuitive user interface can easily guide you down a path of uninterrupted data discovery and enlightenment.
8.1.16 BSI Cybersecurity and Information Resilience (Ireland)

Corrig Court, Corrig Road, Sandyford Industrial Estate,
Dublin 18. D18 C6K1, Ireland.

Company Website: https://www.bsigroup.com/cyber-ie

Company Description

BSI (British Standards Institution) is the business standards company that equips businesses with the necessary solutions to turn standards of best practice into habits of excellence. Formed in 1901, BSI was the world’s first National Standards Body and a founding member of the International Organization for Standardization (ISO). To build our expertise in the information security field, BSI acquired Espion, an Irish cybersecurity and information resilience business who have experience with private sector organizations, including global contracts.

The BSI centre of excellence for Cybersecurity and Information Resilience is based in Dublin, where it manages and secures corporate information for BSI’s 84,000 clients across 193 countries. The company provides expertise to clients on the identification, protection, compliance and management of their information assets through a combination of consultancy, technology, research and training. Its mission is to help clients achieve Information Resilience - an environment where infrastructure is protected and secure, regulatory and compliance obligations are met, people are safe, and reputation and trust is maintained.

The company employs 75 staff in Ireland at the head office for Cybersecurity and Information Resilience at BSI and globally BSI spans a total team of 16,800. Our highly qualified consultants’ experience and expertise cover the entire Information Governance landscape.

BSI is the business improvement company that enables organizations to turn standards of best practice into habits of excellence. The companies’ Cybersecurity and Information Resilience credentials are enhanced by adherence to internationally recognized accreditations and certifications (CREST / Cyber Essentials / Payment Card Industry Data Security Standard Qualified Security Assessor).

For more information visit bsigroup.com/cyber-ie

Vendor Offerings

BSI Cybersecurity and Information Resilience is a centre of excellence for managing and securing corporate information. We help organizations achieve a state of enhanced and sustainable Information Resilience through four main integrated and woven sets of products and services:

**Cybersecurity Services:** with the proliferation of data breaches and malicious attacks, organizations need to employ the most proficient and best in class cybersecurity strategy available. This ranges across a broad spectrum of testing and vulnerability management services, from penetration testing to gold standard Red Teaming (CREST Approved). Within these services, BSI also provides a host of cloud security solutions, from web security and cloud access security brokerage to identity access management and data protection in the cloud.

**Security Awareness and Training:** BSI can implement robust, agile and compliant training modules and courses to ensure that your weakest link can become your strongest asset in remaining vigilant and resilient to the omnipresent threats.
Additionally, we can offer bespoke, customised, online, inhouse and classroom-based certified training across of mix of information security, cloud security and data protection courses.

**Compliance Services:** from PCI DSS to NIST directive, Cyber Lab certification to ISO 27001 implementation, BSI can provide organisations with up to date, robust and agile services to ensure compliance to regulation and requirements.

**Information management and data privacy:** with the initiation of GDPR, privacy management and data protection has never been under so much scrutiny. Organizations need to be able to be compliant, transparent, open and fair with what they do with personal identifiable information (PII). Organizations need to have controls in place on how they acquire, use, archive and erasure of data.

BSI can provide forensic capability to identify where a breach occurred and if the data was compromised. We also deliver digital forensics, eDiscovery and litigation support services to in-house counsel, law firms, corporations, and government agencies.

Our understanding of multi-jurisdictional international discovery requirements, European Data Protection Legislation and European Banking Secrecy laws enables us to help EU and US law firms manage their European eDiscovery obligations effectively.

- **Electronic discovery**
  
  Our eDiscovery consultants use the most advanced technologies available to collect and analyze information quickly and accurately, enabling clients to make informed decisions for their specific requirements, whether they are for litigation purposes, data subject requests, regulatory investigations or compliance. BSI currently use Relativity, Nuix, Axiom, EnCase, Cellebrite, Veritas and others.

- **Digital investigations and litigation support**
  
  With more information being stored in digital form, there has been an enormous increase in the demand for forensically sound digital investigations, both in legal and internal corporate settings. Investigations are carried out in our ISO/IEC 27001 certified laboratory to ensure that both data security and client confidentiality is always maintained to the highest standards.

- **Incident Response and Digital forensics**
  
  If your organization suffers a data breach, how will you react? How can you find out if any Personally Identifiable Information (PII) has been affected? We help our clients by using the principles of incident response and forensics fields to manage an investigation into the breach, mitigating a possible breach of GDPR.

<td></td>
</tr>
</tbody>
</table>

#### Company Description

Bundledocs market leading cloud software is the ultimate tool for today’s paperless (or paperlite) lawyer. Our incredibly easy to use software provides legal professionals with powerful document bundling, in-browser document manipulation, a suite of annotation features, OCR, collaboration and secure sharing. We partner with the industry’s largest technology providers (including iManage, NetDocuments, Worldox, Tikit, Sharepoint etc.) to deliver a fully integrated document workflow to our global client base. Now sold in over 30 countries worldwide, Bundledocs helps legal professionals save time, cut costs and create massive efficiencies within their organisation. Learn more at [www.bundledocs.com](http://www.bundledocs.com).

#### Vendor Offerings

We do one job. Help lawyers easily create document bundles, binders and booklets from anywhere.

It’s really simple to use. Take documents from anywhere, adjust the order, group them, redact anything you don’t want included and that’s it. Bundles are instantly ready to save, securely share or print – from any device, at any time. We even handle document manipulation, annotations, OCR and online collaboration.

At Bundledocs we know it’s imperative that our solution is simple and intuitive to use but also powerful to ensure that every bundle produced is prepared precisely, is of the highest standard and can be provided to any third party in good time. Bundles are now created in minutes – not hours!

Our tool eliminates repetitive and laborious tasks to produce binders that enhance the image and reputation of your organization. That’s not all. With Bundledocs you can reduce photocopying, staff costs, and delivery costs, become more environmentally friendly and even move towards a paperless office.
### 8.1.18 Canopy Software, Inc (US)

<table>

</tr>
</tbody>
</table>

**12020 Sunrise Valley Dr #100, Reston, VA 20191**
**www.canopyco.io**

**Company Description**
Canopy was conceptualized in 2018 when two veterans of the eDiscovery software and services market, Ralph Nickl and Oran Sears, witnessed the limitations of using eDiscovery technology to respond to breach incidents. Knowing that a purpose-built application would accelerate the identification of the actual people who are affected by data breaches, the two officially launched Canopy Software, Inc. in 2018.

We are passionate about data privacy and absolute transparency if-and-when non-public information is vulnerable. That’s why Canopy applies AI and machine learning to combat the data privacy risks that come with the digital world. In fact, our flagship Canopy software has already revolutionized how enterprises respond to a corporate data breach and we are blazing a new trail in the field of protected-data discovery and review.

Since launching the company, Canopy has expedited more than 150 data breaches spanning 40 TB of breached data, 100 million documents analysed, 2 billion PII elements detected, and we’ve identified more than 20 million individuals affected by those breaches.

**Vendor Offerings**
Canopy software is made for protected-data discovery. When a cyber incident occurs, time is of the essence. Combing through millions of documents to find affected PII/PHI requires this new approach. Our purpose-built breach response application reduces the time, cost, risk, and effort associated with the defensible discovery of personally identifiable data, including PII, PHI, FERPA, PCI, CCPA, PIPEDA, HIPAA and GDPR data present in breached data. In partnership with Canopy, cyber forensics companies, cyber insurers, law firms and legal service providers can more quickly notify individuals when their identifying information may be at risk following a breach.
8.1.19 Casepoint (US)

Amit Dungarani, Vice President, Sales & Marketing
adungarani@casepoint.com | +1-703-738-4224

7900 Tysons One Place, Suite 680, Tysons, Virginia 22102
www.casepoint.com

Company Description
Casepoint empowers legal departments, law firms, and public agencies by providing smarter legal technology combined with award-winning client service. Casepoint eDiscovery is the fast, enterprise class, and next generation eDiscovery suite from Casepoint, based on 12 years of innovation in the industry. It is built upon Casepoint Platform, a highly scalable, secure, and configurable application environment that meets the demands of sophisticated clients within eDiscovery and beyond. Whether SaaS, on prem, or hybrid, Casepoint eDiscovery features cloud collections, data processing, advanced analytics, artificial intelligence, review, and productions — all in an easy-to-use web interface. Casepoint customers benefit from the ability to support sophisticated workflows across millions of documents and hundreds of users, with custom reporting and data management tools built-in. Simple, elegant, and intuitive, Casepoint represents the next generation of litigation technology that will empower your global legal team.

Vendor Offerings
Casepoint Offerings:
- Casepoint eDiscovery
- Casepoint Platform
- Casepoint Project Management & Technology Consulting Support Services

Casepoint eDiscovery is the first, premier application deployed on top of the Casepoint Platform. Based upon the experience of our award-winning eDiscovery system that has been supporting clients for the past 12 years, Casepoint eDiscovery is a full-strength, end-to-end eDiscovery suite.

In addition to our award-winning software, Casepoint has a talented and experienced team of project managers and consultants - comprised of seasoned lawyers, technologists, and litigation support specialists - who are dedicated to providing efficient, cost-effective, and customizable solutions for their client partners throughout the eDiscovery life cycle, 24 hours a day, 7 days a week.
### 8.1.20 Causasoft LLC (Switzerland)

</tr>
</tbody>
</table>

#### Company Description
Causasoft was founded in 2012 by a team of leading international litigation and arbitration lawyers and IT specialists to develop and market ExhibitManager. ExhibitManager has been developed to fulfill the daily needs of litigators and arbitration practitioners when writing legal briefs. ExhibitManager is a user-friendly software that frees you and your team from the distractions associated with handling exhibits in large legal submissions in order to concentrate on your core competence: advocacy.

In 2018 Causasoft (Services) Ltd opened a subsidiary in London.

#### Vendor Offerings
ExhibitManager is an intelligent software supporting litigators and arbitration practitioners in legal proceedings, from collecting and reviewing documents, to writing legal briefs as well as creating exhibit bundles with interactive eBriefs. ExhibitManager is the only solution of its kind on the market as it supports all three workstreams: (1) case analysis, (2) inserting exhibits (automatically numbered) into legal submissions with uniform and fully customizable styles, and (3) creating lists of exhibits, bundles and even hyperlinked eBriefs with just a few mouse clicks and without the need for external service providers.

Litigators and arbitration practitioners from many jurisdictions are currently using ExhibitManager. 70% of the GAR 30 firms use ExhibitManager today and therefore have a competitive advantage.

Causasoft also offers ExhibitManager **training** onsite and remote for your team.

For more information see the entry for ExhibitManager in the software section, or learn more about ExhibitManager on our [web site](http://www.exhibitmanager.com).
8.1.21 CCL Solutions Group Ltd

info@cclgroupltd.com
01789 261 200
36 Cygnet Court, Timothy’s Bridge Road, Stratford-upon-Avon, Warwickshire, CV37 9NW

Company Description

The world’s best companies and major public sector organisations rely on CCL Group’s digital investigation and cyber security expertise. Integrating digital forensics, data analytics and cyber security gives CCL Group a unique advantage when protecting the public and securing organisations against evolving cyber threats.

Under the leadership of the first Director General of the National Crime Agency (NCA), CCL Group partner with law enforcement and the legal community on major and complex criminal investigations. Our experience in corporate fraud, compliance and cyber security is why corporate institutions choose CCL Group when protecting their mission critical operations.

CCL Group are the first UK digital forensics provider to become ISO17025 accredited and have partnered with the Metropolitan Police in since 2001. We are a long-standing partner of the National Crime Agency and UK police forces, supporting the most complex investigations including counter terrorism, serious organised crime, child abuse and major investigations.

Our forensic experts using proprietary solutions, provide organisations with complete confidence in the collection and analysis of digital material from computers and mobile devices. As a pioneer in cell site analysis techniques, our unique capabilities have helped secure convictions in high profile domestic cases and internationally.

As the volume of data grows exponentially, being able to manage, analyse and integrate data is a critical requirement for our customers. Our understanding and experience with complex data sets, and the challenge of ingesting, analysing and deriving intelligence from data is why organisations rely on CCL Group’s data analytics solutions for real world problems including, eDiscovery, GDPR, unstructured data audits, and internal investigations.

With its commercial ubiquity, Microsoft O365 has created a new set of problems for CCL clients around information governance and the management of risk. We are working with many of our clients to help mitigate risk and exposure prior to a move to O365: by creating a data asset register we can help them understand the latent dangers within their data estate. Our highly experienced programme management team - together with some highly sophisticated proprietary tools - help clients with their ‘situational awareness’, giving them a clear picture of both their starting point and how far they have to go. Together we then create smart, cost-controlled remediation programs, illuminating ‘dark’ data, minimising risk and maintaining business as usual while migrating safely into the Cloud and O365. The additional value of ‘getting their house in order’ by creating a data asset register is that corporates can then inform future strategy through intelligent analysis. New insights into their data corpus can drive efficiencies, inform new product designs and catalyse new ways to conduct B2B and B2C relationships.
Our cyber security experts observe systems and networks, identifying weaknesses and remedial activity to protect organisations against cyber-attacks with experts on hand to respond to and contain any live incident.

CCL Group are trusted by the most influential public and private organisations with over 30 years’ experience, leading the markets in which we operate.

**Summary of services**

- CPR Part 31 e-Disclosure services
- CPR Part 25 search and seizure orders
- Digital forensics
- Data collections – forensic and non-forensic
- Forensic internal investigations
- CPR Part 35 expert witness services
- Consultancy
- Data remediation
- Data migration
- Data governance
- Project management
- Scoping and mapping
- Imaging
- Pre-processing/early case assessment
- Processing
- Analysis
- Production
- Managed document review

**Software Information**

CCL Group utilise a number of best of breed data management, discovery, analytics and review off the shelf products as well as their own proprietary tools to provide an accredited (17025, 27001, CREST, CHECK) and fully audited process.
### 8.1.22 CDS

<table>

</tr>
</tbody>
</table>
12th Floor Broadgate Tower, 20 Primrose Street, London, EC2A 2EW

http://www.cdslegal.com

#### Company Description

The most demanding law firms, corporations, and government agencies turn to Complete Discovery Source, Inc. (CDS) for a full range of electronic discovery solutions including data identification and forensic data collection, forensic investigations early case assessment (ECA), and advanced analytics. CDS’s technology and workflows have achieved outstanding results for our clients on some of the most challenging discovery matters in the industry, this is why we have been voted “Best of eDiscovery” for seven years in a row in the National Law Journal’s reader survey.

In an industry where consolidation is the standard, CDS is a privately owned, solutions based company that provides award-winning eDiscovery and data management services, litigation support services and technologies, to a diverse array of Government Agencies, law firms (including 77 AM Law 100 firms), global financial institutions (10 of the world’s 20 largest banks), auditing firms within the “Big Four,” national not-for-profits, top-tier insurance providers, energy companies, and other global, national, and local corporations including 125 of the Fortune 500.

Incorporated in 2003, CDS has grown organically, carrying on our commitment to provide flexible, personalised service to our clients. We are not a company cobbled together by integrating a collection of service providers with competing operational, billing, and client facing infrastructures. We are also independent of the demands placed upon the enterprise by outside investors, allowing CDS to provide clients with a personalised approach to matters.

CDS is a true leader in eDiscovery with a history of breakthroughs. We were first to achieve Relativity’s Best in Service designation and pioneered the use of Relativity’s end-to-end capabilities. CDS was also the first dedicated eDiscovery company to earn Privacy Shield and FedRAMP (US) certifications. CDS is consistently advancing the practice of eDiscovery and consulting with our clients on how new advancements can help their institutions save time and money. Protecting your privacy, from IP to DSAR requests is where CDS differentiates itself. Working with your team, we will outline and execute the most efficient and effective ways to conduct document review and disclosure.

CDS has one of the largest and most technologically advanced data security infrastructures in the industry. Our highly-secure Tier 4, SSAE 18 SOC 2 Type 2 tested data centres are fully replicated (redundant) with our disaster recovery sites to support the demands of our clients globally 24/7. Other important differentiators include the following:

- Tier IV SOC 2 Type 2 Tested Data Centers
- FedRAMP Cloud Security Compliance
- Scalability and Bandwidth: In an average month, CDS:
- Manages more than 750 individual projects
- Processes more than 8 TB natively
- Processes more than 6.5 TB to TIFF
- Hosts approximately 3.2 PB in CDS Data Centre’s
- Provides daily project management on more than 700 TB of hosted data

Vendor Offerings

CDS partners with industry-leading technology providers and develop our own proprietary tools in order to defensibly and successfully handle all nodes of the disclosure lifecycle (often represented as the Electronic Discovery Reference Model or EDRM) including Information Management, Identification, Preservation, Collection, Processing, Review, Analysis, Production and Presentation. To that end, CDS’s eDiscovery software of choice is Relativity.

Relativity

CDS is a Relativity Certified Partner providing both Relativity within our London Data Centre as well as RelativityOne via the Microsoft Azure Cloud. CDS supports over 4,200 unique user accounts, 3.2 PB of hosted data, and 750 active case databases. In addition to CDS’s unmatched expertise within Relativity, the platform’s robust security features will ensure that only the right people have access to the data, and that access is limited to the document sets necessary to efficiently use the system and complete their tasks. CDS’s Relativity environment and eDiscovery solutions provides access to all nodes of the EDRM including:

- **Relativity Legal Hold**
  - Relativity Case Dynamics

- **Relativity Processing**
  - Additional, and specialised processing available with Nuix, Venio, Law, and IPRO

- **Relativity Analytics and Assisted Review**
  - Specialised consulting services also available through CDS’s Advisory Services. Our Advisory Services team has extensive experience working with case teams to leverage advanced discovery analytics technologies in order to defensibly reduce large data sets quickly and uncover the most important documents in a particular matter. Our consultants are available to help your team understand and implement such technologies where and when they are appropriate, as well as consult on all aspects of the EDRM.

- **Relativity Trace**
  - Relativity Trace provides compliance monitoring, via automated workflows, allowing for the ingestion, searching and flagging of data for review by compliance teams. Trace allows compliance monitoring to work hand in hand with Relativity’s integrated toolkit including Relativity Analytics and Active learning.

- **CDS Convert**
  - CDS Convert facilitates the conversion of short message data to the Relativity Short Message Format (RSMF). RSMF provides the review and analysis of these often troublesome data types directly within the Relativity platform. CDS Convert supports conversion of data including but not limited to:
• Chat Platforms: Bloomberg, Jira, Slack, Skype, Telegram
• Social Media: Facebook, Instagram, LinkedIn
• Mobile Phone Data: SMS, MMS, Chat Applications (WhatsApp, iMessage), Call Logs, Notes, Contacts and Calendar entries.

### Iconic Translation Machines
- CDS have partnered with Iconic Translation Machines to provide both text and native document translation within Relativity and RelativityOne. Iconic seamlessly integrates within the Relativity User interface providing translation of over 50 languages and 2,000 language combinations in real time. Users can select to have the document translated to either plain text or as a new native copy loaded directly to the workspace as and when documents are submitted for translation.

### Brainspace
- Corporations respond daily to a variety of internal investigations and regulatory requests, quickly assessing the details of a large collection of documents is the new day-to-day reality for compliance and legal teams. Brainspace Discovery provides these teams with an intelligent, highly scalable analytics platform that reveals the story in an investigation. With Brainspace Discovery, legal and compliance teams can: Save time and reduce the costs and complexity of new or recurring investigation activities, perform a variety of in-house investigations more efficiently, reveal the story within large data volumes in a fraction of the time spent using disparate systems, and develop better investigation strategies much earlier in the process. Brainspace Discovery transforms millions of data points into fact patterns that are easy to recognise and understand, and is ideal for teams concerned with finding facts fast, framing timelines of critical activity and identifying the people involved in and impacted by an investigation.

### Veritone
- Manual transcription and phonetic-based search have traditionally been the “go-to” approaches for searching audio and video eDiscovery. These methods, while adequate, are not only expensive, but slow and limited in scope. With Veritone, audio and video eDiscovery is no longer limited due to cost, time, and human capital constraints. The Veritone Platform combines best-of-breed artificial intelligence engines – including transcription, sentiment, translation and face recognition - with powerful applications to deliver unprecedented search, impressive speed, and controlled cost. Seamlessly orchestrating AI transformation processes and selecting the most appropriate engines for higher levels of cognition and optimum results.

### Heretik
- Integrated into the Relativity review platform, Heretik assists in the review and analysis of contractual agreements including the analysis and classification of contracts by section, and type. Once analyzed and classified data visualisation and review prioritization can be applied to your data as well as comparison functionality to identify changes in contracts or to identify similar clauses and sections across multiple contracts.

### Delegate
### CDS Forensic Services

- CDS’s Forensic Services Group has extensive experience conducting forensic collections domestically and internationally in all manner of corporate email systems, servers, user workstations (to include various operating systems), websites, cloud storage, Slack and mobile devices.

- Our forensics team conduct forensic investigations on cases such as intellectual property theft and employee misconduct investigations, and utilise industry leading tools including FTK, Encase, Axiom, Cellebrite and Blackbag to name but a few.

- CDS forensic services include but are not limited to onsite and remote forensic collections of a variety of sources, analysis of USB history, file access activity, deleted file recovery, and analysis of log files, volume shadow copies, mobile device analysis and mobile phone backup analysis and extraction.

**Company Description**

Founded in 1999 by a team of highly experienced telecom and mobile telephony professionals, Cellebrite is a global company known for its technological breakthroughs in the cellular industry.

Cellebrite was the first company to recognize the outstanding market opportunity in users' mobile content. The company’s advanced retail mobile solutions are unique in offering in-store phone-to-phone content transfer, backup and restore, diagnostics, and application and content delivery. In addition, Cellebrite offers retailers monitoring, statistics and analysis of sales activities.

In the forensics division, Cellebrite’s UFED (Universal Forensic Extraction Device), a high-end mobile forensics solution, extracts, decodes and analyses actionable data from legacy and smartphones, handheld tablets and portable GPS devices for use in law enforcement. Cellebrite also supports the extraction and analysis of Chinese manufactured phones.

There are more than 20,000 UFED units deployed to law enforcement, police and security agencies in more than 60 countries.

The company employs more than 300 people of whom 170 are engaged in R&D.

**Vendor Offerings**

The UFED (Universal Forensic Extraction Device) series is a high-end mobile forensics solution, to extract, decode, and analyse actionable data from legacy and smartphones, handheld tablets and portable GPS devices. See Software sections for more details.

8.1.25 CloudNine (US)

Tony Caputo, CEO

tcaputo@cloudnine.com | +1 714-462-6464

14655 Northwest Freeway, Suite 135,
Houston, Texas 77040

www.CloudNineDiscovery.com

Company Description

Every day more than 1,000 corporations, law firms, government agencies, and legal service providers.

By offering CloudNine Collection Manager™, Explore™, Review™, LAW™, and Concordance® as an individual or comprehensive and integrated solution, hosted and on-premise, CloudNine delivers market-leading flexibility and performance.

Built on values of superior performance, continual development, and excellent customer service, CloudNine is committed to the success of its clients, employees, and a global network of service partners.

In addition to its software, CloudNine also provides extensive education to eDiscovery practitioners as highlighted by its publication of the eDiscovery Daily Blog. Authored and edited by industry expert Doug Austin, the eDiscovery Daily is the go-to resource for thousands of eDiscovery and eDisclosure professionals seeking to keep up with the latest news and case law in the world of digital discovery.

CloudNine also provides an extensive array of Continuing Legal Education offerings, customized to support client educational requirements.

Established in 2002, CloudNine has offices in Houston, Raleigh, and Dayton, as well as remote employees throughout the USA.

Vendor Offerings

CloudNine offerings allow clients to experience the speed and simplicity of secure, self- service eDiscovery automation as well as the power of a full-service eDiscovery provider. These capabilities help attorneys and compliance professionals analyze, process, review, and produce electronically stored information in the conduct of litigation, investigations, and audits.

Simplified Discovery Automation Software, powered by CloudNine

CloudNine Collection Manager

Streamline and automate Office 365 and OneDrive data collection.

- Easy enough for first-time collectors, yet powerful enough to meet the needs of litigation support professionals and manage complex collection projects.
- With a single click, move collected data into CloudNine Explore™ for processing and analysis and notify case teams when their data is ready to be searched and reviewed.

CloudNine Collection Manager Overview:

- Install in minutes; no training needed.
- Large-scale collection across multiple mailbox accounts using OAuth 2.0 or a single account using login credentials.
- Collect linked OneDrive attachments.
- Create files, PSTs, or transfer directly to CloudNine Explore.
• Merge collected mailboxes into a single Master Custodian PST/Zip, or one PST/Zip per Mailbox.

• View account details to differentiate identical account names.

• Apply a date/time filter based on Received Date/Received Time to narrow scope of collection.

CloudNine Explore

Insight into “big data” quickly and easily to investigate issues, assess risk, confirm compliance and begin early case assessment to complete your project objectives, quickly and efficiently.

• Explore: Navigate through data to identify risk, determine scope and control cost.

• Assess: Inspect and review data using automated and in-person processes.

• Protect: Securely load, ingest and preserve data needed for ongoing investigation or litigation.

• Deliver: Provide information as required for legal production or further investigation.

Core CloudNine Explore Technical Overview

• Core CloudNine Explore Technical Overview

• Step-by-step and advanced user workflows.

• Drag and drop data indexing.

• Date, domain, file type, PII and more filtering.

• Search term testing, reporting.

• First Pass Web UI Review with batching, sampling, tagging.

• Foreign language document identification.

• MS SQL Server, DT Search, open API making CloudNine Explore a tech team friendly solution.

• Deploy anywhere – including laptops – enabling you to take the platform where the data lives.

• Cross machine multi-threaded/core in-place indexing including PSTs.

• One million records indexed/hr and ready to search using one machine.

• No file copies necessary until export.

• Scales out across low cost devices.

• Direct index of forensic images.

• Bulk OCR text generation.

• Fully processed native exports.

• Additional functionality available including scan, searchable PDF creation, TIFF image creation, review, productions.
**CloudNine Review:**

Streamlines the discovery, investigation, and audit process by allowing you to upload documents quickly and begin reviewing your document collection within minutes. CloudNine Review helps users:

### Issue and Track Legal Holds:

- Create a customized hold notice and issue to key custodians to facilitate compliance with your preservation obligation. Send reminders or add additional custodians as needed.

### Upload Data:

- Enable do-it-yourself collection and uploading of data to a secure on-line repository, enabling you to get the process started automatically without any human intervention required.

### Automate Processing:

- Convert documents to a usable form for review. Exclude duplicative ESI with a click of a button. Easily identify non-responsive categories of documents for exclusion from review.

### Search and Review:

- Identify potentially responsive documents quickly with robust search capabilities.
- Create review sets for multiple reviewers.
- Add users and data fields as needed.
- Set user rights to control access to functions, fields, and documents.
- View search hit results on rendered text or even images.

### Generate Productions:

- Automate production to create precision productions and privilege logs.
- Track multiple productions for later reference in future matters.

### Retain Data:

- Maintain collection in a protected cloud infrastructure until the matter allows for data destruction.

**CloudNine Review Certifications**

Based on the combination of CloudNine’s protected cloud data center infrastructure and dedicated cloud environment, CloudNine complies with important standards, certifications, and attestations including:

- FISMA Compliance
- SSAE 16 Type II Audit (Completed)
- HIPAA Compliance
- ISO 27001 Compliance
- PCI DSS Compliance
- CSA Security, Trust & Assurance Registry
- EU-U.S. Privacy Shield Framework
- Swiss-U.S. Privacy Shield Framework
**CloudNine LAW**

Helps legal professionals process discovery data, both electronic and paper, while providing maximum flexibility in production and in export to review. Now enhanced with a new Turbo Import, CloudNine LAW offers a 64-bit, multi-threaded ingestion engine for linear scalability and multi-agent file processing to support the “big data” challenge facing organizations today.

Support for over 2,000 file types for importing and exporting:

- Transfer direct from CloudNine Explore™ and import directly to CloudNine Review and Concordance and other leading document review platforms in a wide range of formats.

Scalable to handle even the largest imaging, endorsing, OCR or print jobs by adding additional agents.

Power production capabilities:

- CloudNine LAW leads the way in document production, including the most flexible imaging and endorsing capabilities.

**LAW Core Modules**

- Turbo Import: Multi-core, multi-threaded ingestion and processing of data
- Admin: Create cases and exports.
- QC/Edit: Move documents around, add or delete bates numbers.
- Endorse: Brand or burn headers or footers into images.
- OCR: Generate searchable text from image files.
- Print: Print image files out in a batch process with or without slipsheets.

**Additional Modules**

- Scan or TSI: Scan paper documents into TIFF format.
- TIFF: Create TIFF images from all native documents.
- E-Print: Print native documents to paper.
- Searchable PDF: Create PDF Files that you can easily search.
- Full-Text Indexing: Search all extracted text as well as text resulting from optical character recognition (OCR).
- ABBYY OCR: Create and index readable OCR text for difficult originals and Unicode documents.
- Analytics: Identify near-duplicates and email threads with extracted and OCR text.

**CloudNine Concordance**

Enables more than 70,000 litigation professionals to import, review and produce high volumes of eDiscovery documents in-house, with an attractive annual cost and manageable computing footprint.

Robust Searching:

- Search text and metadata to find potentially relevant documents fast.

Review Workflow Management:
• Easily categorize and manage documents with user created tags and tag folders.

• Meet Production Obligations:
  • Create image and/or native file productions with corresponding industry-standard load files.

Support Downstream Needs:
• View, annotate and redact images and near-natives for production, or print for depositions and expert witnesses.

Multi-User Support:
• Support multiple reviewers over LAN or WAN and schedule routine jobs using Administration Console.

Maximize Capacity:
• Build databases without predefined limits and work across multiple databases at one time.

Access it Anywhere:
• Use mobile license for case portability.

CloudNine Concordance Streamlined eDiscovery
Import, search and organize email and other electronic documents quickly and accurately:
  • Send scanned paper documents and electronically processed files directly from CloudNine LAW™ software to Concordance discovery management software for more detailed review.
  • Email and document wizards make it simple to import e-documents—and keep the original formatting, metadata and hyperlinks to native documents, as well as parent-child relationships between email and their attachments.
  • Accelerate review speeds using built in features to find or tag related parent and attachment documents.
  • Easily change the fields and the order in which they appear in Edit and Table Views for a personalized workspace.

A complete overview of available services can be found online at cloudnine.com.
## 8.1.26 Codex Global

Christopher Bryden  
[Email and contact details]

**Codex Global, Atlantic House, 351 Oxford Street, London, W1C 2JF**

[Website]

### Company Description

Codex specialises in translation and language services within the legal sector. We are driven by technology and underpinned by secure workflows in order to provide a robust service to our Global client base of leading law firms and in-house legal teams. Our in-house project managers and specialist network of linguists have vast knowledge of the legal sector in order to meet expectations at even the tightest of deadlines.

Covering over 150 different languages, we are able to provide high quality translations for a number of content types relating to legal, finance, property, manufacturing, pharmaceuticals and automotive amongst other areas.

### Translation

We offer high quality translation & proofreading services, covering all subject matters. and we have the capability to turnaround large volumes of documents within short time periods. Our linguists are subject matter experts and we are able to build teams of linguists who will work simultaneously where necessary to meet tight deadlines. We will be pleased to discuss your requirements to determine the most appropriate workflow, taking into account the type of document, subject matter, timescales and end use of the translation.

**Machine Translation Post Editing (MTPE)**

This workflow is particularly effective for large volumes of content as it can reduce both cost and turnaround. After the content has been processed through a machine translation engine, our professional subject matter experts will edit the machine output to ensure there are no mistakes and that the true meaning has been reflected in the translation.

### Audio Transcription

Codex regularly undertakes audio transcription for legal clients. This includes monolingual transcription as well as bilingual transcription across many language combinations.

### Interpreting

Codex provides both consecutive and simultaneous interpreting services for a range of scenarios including arbitration cases, client meetings, court rooms, depositions, medical appointments and conferences. We will be pleased to provide you with CVs of linguists in advance of any assignments should you or your clients require this.

### Multilingual Document Review

We are able to provide expert linguists to review documents in multiple languages at your offices (or preferred location). This can prove an efficient way of determining which documents should then be fully translated for further investigation and which can be excluded from any further research.
8.1.27 Consilio

James MacGregor (MD)
james.macgregor@consilio.com | +44 (0) 20 3808 9634
10 Aldersgate Street, London, EC1A 4HJ
www.consilio.com

Company Description
Established in 2002, Consilio is a global leader in eDiscovery, risk management and compliance, document review, and legal consulting services.

The company assists legal departments of multinational corporations and their outside counsel to respond to legal matters, reduce legal spend, minimise risks, and operate more efficiently using innovative software, cost-effective managed services, and deep legal and regulatory industry expertise across a spectrum of industries.

Safe Harbor and ISO 27001 certified, Consilio can deploy its services rapidly and efficiently to clients anywhere in the world from offices and data centres in North America, Europe and Asia. Consilio operates one of the industry’s largest suites of eDisclosure services which includes data collection, complex data processing, document hosting, eDisclosure consulting and technology, digital forensic services, data analytics consulting, document review services and Managed Services.

Consilio is one of the largest and most experienced Relativity providers in the world. This includes being an “Orange Best in Service” premium hosting partner, having over 10 Relativity Masters worldwide and hosting over 35 petabytes of data (with one database of over 120 million documents). In London, Consilio has maintained Best in Service™ status every year that the accreditation has been available and longer than any other organisation outside of the United States.

Consilio has worked on thousands of global projects, including dozens of landmark cases. In one project, the company hosted more than 80 million records in 34 languages and supported more than 1,000 reviewers around the globe. The company’s project managers have diverse law firm, corporate and consultancy backgrounds, averaging 10 years of industry experience in project management, litigation support, managed document review and forensic consulting.

Consilio operates more than 70 offices, review centres and data centres in 11 countries around the world.

Vendor Offerings
Consilio provides a range of services to assist law firms and corporate clients involved in litigation, arbitration, regulatory investigations, internal investigations and competition matters.

eDisclosure Consulting
Consilio delivers practical advice on approaches to eDisclosure projects, from initial scoping, ‘data mapping’, Electronic Documents Questionnaire drafting and critiquing, production of eDisclosure budget estimates and Case Management Conference support. The company also provides consultancy on complex matters involving global data collections, multiple languages and less easily accessible information sources such as Bloomberg® chat, bespoke/structured databases, instant messages or recorded telephone conversations.
**eDisclosure Technologies**

Consilio offers a range of technology solutions to support different stages of the eDisclosure process, from initial assessment of client data through processing, searching and document review to productions. Consilio’s proprietary review platform supports a wide range of information sources, including recorded telephone conversations and Bloomberg® chat. Data is hosted within a global network of data centres, and is accessed by legal teams using highly secure, encrypted connections.

**Digital Forensics and Collections Services**

Consilio forensic experts engage with corporate IT departments in the early stages of a project to map out potentially relevant data sources before deploying to client premises and data centres to preserve, collect and analyse electronic data. Consilio forensic experts are experienced in extracting data from laptops and workstations, servers, handheld devices, “cloud” storage and backup tapes, and other media. Where data exists in a structured form, Consilio experts will liaise with client legal teams to understand the aims of the review and will query the relevant database(s) to create reviewable and producible reports.

Consilio provides digital, forensic-investigative services for a range of matters including infringement of intellectual property rights, compliance investigations and determining the provenance and authenticity of electronic documents in litigation or arbitration. Consilio forensic staff members are experienced in providing expert witness evidence in written reports or testimony.

**Multilingual, Document Review Services**

Consilio offers three models of document review services to provide clients with the flexibility needed to achieve consistent, defensible, high-quality results within compressed timetables:

- **Staffing:** Clients are responsible for the strategy and process for review and disclosure, but leave the task of assembling a talented team of reviewers to Consilio.

- **Coordinated Review:** Clients leverage the experience of Consilio’s expert recruiters and review coordinators while maintaining control over the review workflow.

- **Comprehensive Managed Review:** Consilio provides an inclusive end-to-end service, leveraging its advanced technologies and best practices.

Whether the project is local or global, each option provides access to Consilio’s expert recruiters who can assemble a skilled team in as little as 24 hours, drawing from an established pool of legal professionals with native fluency in more than 30 languages and experience across varied matter types and industries. Review location is flexible as clients can choose from any of Consilio’s review centres or utilise their own space. Clients can also determine the amount of review oversight needed for the matter.

Clients can utilise flexible pricing models - such as per-document pricing - that facilitate a cost-effective review.

Consilio also offers specialised document review services for contract review and normalisation to a contract management database, or due diligence review as part of corporate transactions.
8.1.28 Control Risks

Satinder Soni (Director)

Satinder.Soni@controlrisks.com | 020 7970 2287 or 07714 541267

Cottons Centre, Cottons Lane, London SE1 2QG

www.controlrisks.com

Company Description

Control Risks is a specialist global risk consultancy that helps organisations succeed in a volatile world. Since its inception in 1975, Control Risks has worked in over 130 countries around the world. Through insight, intelligence and technology we help organisations seize opportunities while remaining secure, compliant and resilient.

We support clients by providing strategic consultancy, expert analysis and in-depth investigations through to handling sensitive political issues and providing practical on the ground protection and support. Our unique combination of services, our geographical reach and the trust our clients place in us, when crises and complex issues arise, we help you recover.

The headquarters of Control Risks have been located in London since the company’s foundation, but a strong global presence is at the core of the company’s strategy. Working across five continents and with 36 offices worldwide.

Vendor Offerings

At Control Risks you will find a unique team forged from global accounting, eDiscovery and specialty consulting firms. With unrivalled expertise in large scale, complex and cross-jurisdictional matters, we are adept at helping you establish defensible and repeatable processes to deal with high volumes of electronically stored information.

**eDiscovery**

Control Risks can process and host matter data on Relativity in one of their secure data center locations: Berlin, Hong Kong, London, Los Angeles, São Paulo, Shanghai and South Africa. Matters hosted in London will be hosted in RelativityOne.

Nuix is also utilised for early case assessment, forensic analysis and preliminary investigations.

**Cross-border discovery consulting and assistance**

We help you with the strategic planning, preparation and execution of cross-border investigations and litigations, whatever the size. Our dedicated and global project management team provides quick and open collaboration.

**Data processing, hosting and production**

Control Risks supports companies and their outside counsel with defensible data processing and information reduction techniques. Our data processing capabilities supports thousands of file types stored across local networks or in the cloud.

Using file type filtering, search term and date range filtering, predictive coding, email threading and custom solutions, we can reduce terabytes of data

**Early case assessment**

Control Risks provides early case assessment (ECA) solutions by working closely with you to understand and manage data at the earliest stages. We leverage high-
speed indexing and a variety of analytical features and reporting capabilities to provide powerful insights into your data.

Robust analytical tools and ECA capabilities enable you to gain an in-depth understanding of your electronically stored information (ESI) before undertaking full-scale reviews. We provide the option to conduct preliminary analysis with Nuix, which can provide domain lists, file types and timelines of the data collected, as well as the ability to run preliminary search terms and date ranges. By providing an advanced look into case facts, we improve your ability to make strategic decisions early in the review process.

**Technology assisted review**

We offer Relativity Analytics such as email threading, near-duplicate analysis, concept clustering and searching, as well as predictive coding or Relativity Assisted Review.

Relativity Administrators, Experts and Masters can help design automated workflows for predictive coding that include the appropriate quality assurance steps and detailed reporting.

Our team works with law firms to configure, train, execute and monitor the prioritisation and categorisation of documents, as well as assist with executing stratified and validation sampling on the data.

**Digital Forensics**

The digital forensic experts at Control Risks have over 75 years’ combined experience in the securing, recovery and analysis of digital systems. Whether examining standalone computers or large corporate networks, Control Risks has the experience, technology and expertise required to get the results you need. With trained forensic consultants spread across our office network supported by our worldwide team of investigators, we offer our clients a specialised, unrivalled service. Control Risks has first responder forensic consultants in five continents providing localized expertise.

Our digital forensic services include:

**Data mapping**

Working seamlessly with our investigations teams in local languages, we map the key custodians of data and ESI sources for preservation and collection through interviews with client IT, custodians and witnesses. Control Risks also consults with corporate and outside counsel to ensure compliance with local data privacy and transfer laws.

**Forensic analysis and expert reporting**

Data collected by Control Risks’ forensic consultants can be indexed using both forensic and eDiscovery tools, which enables high-speed searching and retrieval of information according to specific criteria. Indexed data can be searched and analysed by various methods including keywords, date ranges and communication metadata.

Forensic processing of hard disk images also yields technical artifacts that profile computer use, which may be relevant to the case.

We provide expert reporting to document the entire digital forensics process to produce reports and witness statements for law enforcement, corporate counsel and law firms.
Forensic imaging and data preservation
We work to assure live and ambient data will have its integrity preserved to allow defensible analysis and review. When forensic imaging is not possible, Control Risks will perform defensible secure ESI collections and can also perform targeted collection of data that is digitally fingerprinted with a checksum to ensure its integrity.

Mobile device, cloud and social media collection
We are able to image and extract all types of data from a wide variety of mobile phones, tablets and the cloud.

Cloud source data presents a unique set of challenges in terms of data identification, preservation and acquisition – not to mention data privacy and transfer concerns. In accordance with client requirements and relevant data privacy and transfer laws, Control Risks’ forensic consultants can collect data from cloud services including webmail, hosted data repositories and social media websites.

Data Analytics
The data analytics team at Control Risks helps organisations acquire and analyse high volumes of financial, operational and transactional data. This uncovers actionable insights to improve operational margins and mitigate compliance risks.

Business insights, visualisation and dashboarding
Analysing enterprise data to identify unexplored growth areas and operational pain points to enables the C-suite to make business critical decisions. We can enhance and centralise your global reporting through intuitive and interactive visualisation dashboards.

We not only automate existing reports to reduce reliance on IT, but empower executives to explore insights and test hypotheses on their own. We can assign probabilities to scenarios and create risk scores so that business stakeholders and compliance officials can see the potential outcomes of their decisions before taking action.

Compliance monitoring
Control Risks has a team of compliance experts and technologists with experience designing and developing compliance monitoring applications that incorporate risk-based transactional analytics and workflow delegation technology to help you meet your regulatory requirements and internal compliance controls.

Whether it is automating fraud detection as part of a compliance assurance programme related to the Foreign Corrupt Practices Act (FCPA), or implementing decision-based workflows to meet the unique business rules of a regulated industry, our development team collaborates with you to create ideas and solutions to satisfy your compliance monitoring needs.

Commercial data reporting
Our data analytics team has extensive experience in analysing financial and accounting data to help companies prepare for business critical events such as mergers and acquisitions, IPOs and other market changing actions.

We work with multinational corporations to solve specific management reporting issues, particularly when timescales are urgent. Our accounting expertise and familiarity with financial systems helps us act as an interim reporting solution to address any shortcomings in existing reporting capabilities. Our team can quickly create ad hoc reporting, ensure accuracy in reported figures and reconcile existing variances.
### Critical Data

**Ciaran Kennedy**  
- Technical Director  
  
**ciaran@criticaldata.ie**  
**01438 893715 | +353 18612280**  
**719 Northwest Business Park, Dublin 15, Ireland**  
**www.criticaldataservices.co.uk**

#### Company Description

Critical Data was established in Dublin in 2004 to serve the hard disk recovery needs of clients based in Ireland and further afield. Since formation, additional data retrieval services have been developed, most notably in the area of eDiscovery support in respect of extraction of legacy data stored on tape.

Unlike many competitive businesses that provide tape extraction services as part of a wider eDiscovery offering, Critical Data has purposely adopted a position as an independent data extraction service, without data review offerings, thus avoiding potential internal or external conflicts of interest.

In 2013, Critical Data became an accredited service partner of Index Engines, and through continued successes with global eDiscovery and consulting clients has become the Index Engines’ technically accredited tape service provider in Europe.

Critical Data can offer a mobile short-term or fixed long-term solution deployment anywhere in Europe as dictated by project scale, taking into account data security, data protection, legal and jurisdictional considerations.

Our focus is the minimisation of time to de-duplicated data from tape, and also on the resultant cost savings that are delivered by tape indexing over the traditional tape restoration which involves full (and duplicitous) restoration of tape content. Our proprietary process wrapped around our Index Engines core technology means that no third-party service will restore selective responsive data from tape quicker than Critical Data. Whether you have 1 tape or 1 million tapes, we can help!

#### Vendor Offerings

- Advanced Data Recovery services from all media types
- Law Enforcement data recovery specialists including CCTV Recovery
- Backup Tape processing for eDiscovery and backup-platform migration
- Voice data extraction and transcription from legacy call-recording systems
- Litigation Support – Critical Data can rapidly extract selective responsive data from almost all tape formats based on content and/or metadata queries. Other service providers usually need to restore the full tape content to get to the data you need. The more tapes in question, the greater the performance benefits of our service compared to our competitors.
- Backup Migration – in the case of migration to new backup software or new physical tape, we can cost-effectively migrate de-duplicated legacy data to the new tape format.
- Digital Vaulting of Legacy Data - Our Index Engines-based offering is the best solution on the market for projects involving remediation of legacy mail from tape into a live digital enterprise vault.
8.1.30 CYFOR

Lawrie Hall, Director.

lawrie.hall@cyfor.co.uk | +44 (0) 207 438 2045

Becket House, Old Jewry, London, EC2R 8DD

www.cyfor.co.uk

Company Description

Since being founded in 2002, CYFOR has been supporting law firms and corporate clients with cost-effective, end to end eDiscovery and advanced Digital Forensic services. These specialisms extensively cover litigation and dispute resolution, as well as commercial, criminal and internal investigations.

Our ability to combine specialist forensic data collection techniques with a full suite of advanced eDiscovery workflows provides a leading edge. By harnessing the latest technology, including complex data analytics and processing, we have a proven capability from extraction through to production at every stage of the eDiscovery life cycle. We offer bespoke solutions on highly contentious, multi-lingual and multi-jurisdictional matters, with time critical deadlines.

A dedication to the highest level of quality and data security ensures CYFOR is both ISO9001 and ISO27001 accredited.

Vendor Offerings

eDiscovery: Complete Electronic Discovery Services

CYFOR offers complete end-to-end eDiscovery services, incorporating all phases of the Electronic Discovery Reference Model (EDRM), with a proven capability from forensic extraction through to production. Operating internationally, CYFOR supports law firms, corporate clients, regulatory bodies and government agencies involved in litigation, dispute resolution and regulatory investigations.

Our portfolio of electronic discovery solutions includes;

- Early Case Assessment
- Forensic data collection
- Document review
- Technology Assisted Review (TAR)
- Data Analytics & processing
- Secure data hosting

All services are underlined by dedicated project management, which is fully customised to each project developing the right strategy, addressing data review efficiency and ensuring the analytics tools are maximised. Our eDiscovery specialists are all Relativity certified and have the technical intelligence, consultancy skills and experience to operate as a natural extension to your team.

Our secure ISO27001 certified infrastructure, combined with industry leading technology, provides clients with a scalable solution and a single point of accountability to ensure all eDiscovery requirements are met.

Fixed Quoting

Producing information for review and analysis in response to disclosure requirements can be time consuming and expensive. With over a decade of
experience in electronic disclosure, we know it’s essential to have a handle on costs and have adapted to the Jackson Reforms to offer fixed price quotations.

We provide a highly focussed and transparent pricing methodology to give visibility of costs at the start of any project, ensuring that budgets are accurately controlled and maintained. Also enabling the eDisclosure process to be applied to smaller cases on an investigatory basis. Our client focused, consultative approach has enabled us to deliver exceptional and cost-effective results, time and time again.

**Forensic Data Collection**

With international experience and remote download capabilities, CYFOR are specialists in forensic data collection. Our fully qualified digital forensic experts are no strangers to complex global data extractions, across the full spectrum of digital devices, under time restrictive deadlines.

CYFOR’s digital forensic investigative service covers a range of matters, including:

- Regulatory disclosure
- Data preservation during litigation
- Electronic disclosure
- Compliance investigations

From the first point of instruction, CYFOR provide a bespoke workflow to collate all the data in a forensically sound manner, while advising on the best technical strategies, using the latest software. We ensure all relevant data sources have been identified and mapped out prior to forensically acquiring, analysing and reporting digital evidence.

From extraction through to presentation in court, CYFOR maintains secure evidence continuity, throughout the entire life-cycle of your data.

**Document Review**

Online document review platforms are powerful and indispensable tools in the eDiscovery process. CYFOR has comprehensive document review services, utilising the latest technology to effectively manage vast amounts of electronically stored information (ESI) on a wide range of complex matters, which can be scaled to meet clients’ requirements.

**Processing**

Through the application of advanced techniques, our eDiscovery Specialists can rapidly process and considerably reduce clients’ data volumes within litigation or dispute resolution. CYFOR’s processing capabilities have the ability to burst in order to handle large data volumes in short time frames.

**Secure Data Hosting**

We protect our clients’ data by preserving it in our own data hosting environment, which operates on its own independent forensic server. Our high-performance infrastructure is powered by an intelligent security model, allowing 24/7 access and maintenance by a handful of NPPV security cleared senior forensic specialists.

**Technology**

CYFOR invest heavily in sophisticated technologies, allowing us to provide the best solution for our clients and their budgets across the entire eDiscovery life-cycle. Our end-to-end review platforms include;

**Relativity:** An industry leading online review platform servicing every part of the eDisclosure process, from legal hold through to production, including Early Case Assessment (ECA) and analytics. It enables case teams to handle the largest, most
complex projects using flexible, customisable workflows and powerful searching and visualisations capabilities—all in a highly scalable environment.

Core features:
- Visual analytics
- Predictive coding
- Email threading
- Data clustering

**Nuix:** As an eDiscovery solution, Nuix's exceptional power enables CYFOR to process and search vast quantities of data, from collection through to production within the most complex investigations.

Core features:
- Processing power
- Remote email downloads
- Data management & export
- Data exporting
- Web Review & Analytics

**Digital Forensics – Forensically acquiring, analysing and reporting digital evidence**

Recognised as industry experts, Digital Forensics has been at the core of CYFOR's service offering since inception. With a comprehensive range of forensic services and a proven capability, we have conducted numerous high profile civil and criminal investigations.

Summary of services
- Data recovery
- Forensic data collection
- Mobile phone forensics
- Computer forensics
- Cell site analysis
- Audio visual forensics

We have the expertise to forensically recover, analyse and present digital evidence across a full range of digital devices including, computers, mobile phones, external hard drives and servers.

**Forensic Specialists**

Individually, CYFOR's highly qualified digital forensic specialists are recognised as some of the industry's leading specialists. As a collective, their combined expertise becomes even more powerful for the most complex of cases, while going above and beyond to exceed client expectations. They utilise the latest technology and digital forensic techniques to discover all potential evidence within a wide range of investigations. Our forensic investigators are all approved Expert Witnesses and courtroom trained. Strict adherence to the ACPO Guidelines and thorough forensic protocols, ensures comprehensive reporting, often concluding with expert evidence presented in court.

**Digital Forensics Technology**

Digital forensics platforms are powerful and indispensable tools within any investigation and we continually invest in our technical infrastructure and forensic software to enhance our service offering. To enable forensic imaging, data
extraction, analysis and reporting of digital devices we have strong partnerships and full certification with the following leading technology providers;

- EnCase
- FTK
- Cellebrite
- XRY

Company Description

Juan Di Luca and Andrea Valencia established DAS in 2012. They have 18 years of combined experience working for some of the most prestigious law firms and evidence management companies in Europe and the Americas. DAS is an established global group of highly flexible and adaptable multilingual lawyers, jurists, accountants, forensic and data analysts. They provide managed document review, outsourced and insourced evidence review services.

Their experience includes cross-border and multinational investigations, as well as routine litigation. Their multilingual team delivers bespoke services and excel at helping law firms, corporate clients and service providers meet their legal investigation challenges by providing professionals of the highest quality on a temporary basis. DAS latest offshore service option in India allows them to effectively provide full managed review services at a third of the cost of competitors.

DAS has managed eDiscovery/eDisclosure projects across Europe, America, the Middle East and South America where they are now opening a full eDiscovery service facility in order to serve the LATAN market. Their specialised units include: antitrust and competition investigations; legal forensics; compliance investigations, bankruptcy litigation; corporate restructuring; complex financial litigation; WTO disputes; GDPR Data Subject Access Requests, Data Breach Notification, EU data protection; government administrative and regulatory reviews; Anti-Corruption & Foreign Corrupt Practices Act (FCPA) and LIBOR. Their sector-specific experience includes banking & finance, pharmaceuticals, telecommunications, transportation, media & communications and the oil industry.

Vendor Offerings

DAS works with a wide range of document review and information management software, such as but not limited to: Relativity, Brainspace, Concordance, Ontrack, iCONECT, Nuix Discover, Summation, iView, Stratify, Attenex, Lexis-Nexis, CaseLogistix, Nuix, Clearwell and Documatrix. DAS have the ability and proven experience to rapidly scale review teams and eDiscovery personnel in order to handle any project in a timely, cost-effective manner.

**Company Description**

Deloitte LLP operates in 170 countries and has an annual turnover of $43 billion. Over 1000 professionals across the globe are entirely focused on the provision of Deloitte’s Discovery Consultancy, fully integrated e-Discovery services and technologies.

In the UK we have 200 professionals in the Forensic Technology team, and have significant presence ‘in Country’ across Europe. Our management team has over 200 years of Discovery experience.

Our approach is to fully understand our client’s requirements and help define the most effective workflows to meet them. We advise and provide services across the whole EDRM spectrum – these are detailed below.

Deloitte is software agnostic, and constantly reviews and selects best products to add to the portfolio of our ‘primary products’. These products meet country requirements such as language and product support as well as offering global integration. Our practical and operational knowledge of the variety of e-Discovery software provides the insight to develop bespoke applications to further enhance product functionality.

Deloitte’s Project Management principles (such as accredited Prince2 practitioners) ensure that wherever e-Discovery technology and services are required, all procedures, processes and extensive quality controls conform to the high quality standards demanded of a global professional services firm.

Deloitte provides e-Discovery services on cases of all sizes – from tens of Gigabytes through to Petabytes.

We specialise in cross border e-Discovery where data cannot leave the premises or Country. Our global presence, strategically positioned highly secure data centres and portable technologies, allow us to effectively manage cases where greater consideration may be given to data privacy issues and cultural attitudes.

Our services extend beyond traditional eDiscovery and allow clients to address the issues arising from a variety of electronic evidence sources including structured data (databases), Smartphones Instant Messaging, Audio etc. We also provide a full range of Digital Forensic and Cyber investigation service.

Deloitte also specialises in assisting clients in the definition of their e-Discovery requirements; producing Tenders to software and services vendors; and helping in any required implementation.

**Vendor Offerings**

Deloitte’s Forensic Technology teams provides services across in the following areas:

- Discovery Consulting
• Data Collection
• Data Processing
• Data Hosting
• Review Management and Case Support
• Managed Services
• Structured Data Discovery and services (Data Analytics)
• Audio Recovery and Discovery
• Cyber Crime
• Digital Forensics
• Forensic Expert Services
• Document Review Services
• Contract Lifecycle Management
• Data Rooms
• Data Separation

**Software Information**
Relativity
Nuix Discover
Brainspace
Nuix Workbench
Nexidia
Discovery Start
dTrax
Extensive range of Forensic tools

### Company Description

DISCO is a legal technology company that applies artificial intelligence and cloud computing to legal problems to help lawyers and their teams improve legal outcomes. Corporate legal departments, law firms, and government agencies around the world use DISCO for edisclosure, case management, compliance, disputes, and investigations.

DISCO was founded with a vision to help legal professionals deliver the highest quality of services more efficiently through technology that enables lawyers to focus on the practice of law. Its edisclosure platform was born out of the firm’s frustration with conventional ediscovery tools that were slow and difficult for lawyers to use. Instead of forcing lawyers to adapt their work methods to technology, DISCO wanted to invent technology that works the way lawyers work. DISCO’s ‘cloud-native edisclosure platform was the result, and today DISCO is one of the fastest-growing enterprise legal technology companies in the world.

DISCO’s solutions now extend beyond edisclosure to cover the entire litigation lifecycle, from case inception to final resolution. DISCO focused on building AI-driven solutions that not only optimise attorney processes, but also perform functions that would be impossible without technology, such as predictive analytics for compliance that surface legal issues before investigations arise. The latest product milestone is DISCO Case Builder, a suite of case management tools that empowers legal teams to build better stories, work smarter, and leverage past work to help clients win.

In addition to its market-leading technology solutions, DISCO also offers expert end-to-end services (data services, project management, and managed review) to provide consistent, high-quality results, which increase review throughput by 23% and reduce time spent on quality control by 32% on average.

With the rapidly increasing volume, variety, and velocity of data, legal professionals are increasingly turning to DISCO as an innovation partner. Law firms and legal teams recognise that DISCO is not only improving the practice of law today, but is also developing solutions that continually utilise technology as legal risks, obligations, and obstacles evolve.

### Vendor Offerings

DISCO edisclosure platform: An all-in-one cloud-native solution, DISCO edisclosure delivers anytime, anywhere cloud collection, transfer, processing, review, search, and production capabilities with a turnkey infrastructure delivery model that requires no upfront investment in software or services. DISCO’s Dublin-based data center complies with GDPR privacy requirements and provides enterprise-grade information security. DISCO provides transparent and predictable pricing with an all-inclusive per-matter transactional price. Based on pre-expanded data size, it includes all the processing, unlimited users, productions, AI, analytics, and more with no one-off or line-item costs. DISCO also offers subscription pricing options.
**DISCO Managed Review Services:** Using cutting-edge AI technology paired with AI-optimised workflows and deep legal expertise, DISCO’s managed reviews are 60% faster than the industry average, with an average review speed of 88 documents per hour. The speed and accuracy the DISCO platform delivers, coupled with an unrivalled team of industry veterans and DISCO power users, make it easy to guarantee deadlines and budgets.

**DISCO Professional Services:** From project management to data services, DISCO’s dedicated staff of legal and edisclosure professionals are available to help consult with clients in regards to search, investigative needs, and utilising AI to deliver value and extraordinary outcomes.

**DISCO Forensic Services:** To help legal departments easily perform a comprehensive collection, DISCO provides a full suite of end-to-end forensic services, which include forensic preservation, collection, analysis, and consultation, performed by experienced Certified Forensic Examiners using defensible processes and methods.
8.1.34 EDRM

Kaylee Walstad, Chief Strategy Officer
Kaylee@edrm.net
EDRM | PO Box 25, Corbett, OR 97019
www.EDRM.net

Company Description

Empowering the global leaders of e-discovery, the Electronic Discovery Reference Model (EDRM) creates global practical resources to improve e-discovery, privacy, security and information governance. Since 2005, EDRM has delivered leadership, standards, best practices, tools, guides and test datasets to improve best practices throughout the world. EDRM has an international presence in 113 countries and growing and an innovative support infrastructure for individuals, law firms, corporations and government organizations to collaborate as peers to improve the practice and provision of data and legal discovery.

Founded in 2005 by attorney George Socha and technologist Tom Gelbmann, EDRM was created to address the lack of standards and guidelines in the eDiscovery/eDisclosure industry. Since its inception, the EDRM community has steadily grown with participation from hundreds of domestic and international organizations, including representatives from service and software providers, law firms, industry groups, law schools, city governments, state attorneys general, state and federal agencies, and corporations involved with eDisclosure.

In 2016, EDRM became part of the Duke Law School. The Duke community and the Bolch Judicial Institute supported EDRM in its efforts to provide educational and professional resources in eDisclosure and information governance, supporting its mission to promote understanding of the judicial process and improving the administration of justice.

In October, 2019 EDRM was acquired by Mary Mack (CISSP, CEDS, CIAM) and Kaylee Walstad (CEDS, CIMP), the former executive director and former vice president of client engagement, respectively, of The Association of Certified E-Discovery Specialists (ACEDS).

For the past four years, Mack and Walstad led ACEDS, the leading global provider of e-discovery certification and education, stewarding the growth of the association, its certification program, and its chapters to international status and recognition. In their new roles, Mack will serve as the chief executive officer and chief legal technologist, and Walstad will serve as the chief strategy officer for the EDRM. The Bolch Judicial Institute at Duke Law School will remain involved in the work of the EDRM community as a Foundation Partner.

Vendor Offerings

EDRM is a multidisciplinary, contributor driven organization. Contributors work with project trustees, who oversee the participation and work product. EDRM work product is published as creative commons with attribution, with commercial use encouraged. In 2020, projects will have the opportunity to publish monthly.

EDRM develops and publishes global eDisclosure/e-discovery, security, privacy and information governance frameworks. Each framework is designed with two fundamental goals in mind. First, the framework should help people and organizations better understand the framework’s topic – what are the typical major steps in e-discovery, for example. Second, the framework should help them better understand what to do, at a practical level, with respect to that topic. The seven EDRM frameworks are:
Chapter 8 – Supplier & Software Details

• Electronic Discovery Reference Model
• Technology-Assisted Review Reference Model
• Information Governance Reference Model (IGRM)
• Metrics Model
• Privacy & Security Risk Reduction Model
• Talent Task Matrix
• M-SAT (The eDiscovery Maturity Self Assessment Test)

EDRM Active and New Projects for 2020

Beyond frameworks, EDRM contributors collaborate to solve problems or respond to opportunities. The following projects are active or recently concluded and are actively seeking contributors.

FOMO – TAR results typically target recall rates of 75%-80%. Although up to 20% of relevant documents may be omitted from the TAR results (null set) that does not mean that 20% of the relevant information has been omitted. The FOMO (Fear Of Missing Out) project is a statistical explanation of the small likelihood that the TAR null set contains new, significant, relevant information not found in the TAR produced documents. The project team will refine the analysis, anticipate challenges, identify specific use cases, and recommend best practices for a predictive coding process that focuses on the retrieval of relevant information. Project Trustees are Derek Duarte and Mallory Maier and is open to new contributors.

PRO BONO – This brand new project was created to help improve and promote equal access to justice. EDRM’s new Pro Bono Project participants will build a platform for matching organizations and individuals in need of e-discovery capabilities for pro bono matters, with organizations and individuals wanting to make such capabilities available. The Project Trustees HB Gordon and George Socha and is actively seeking contributors.

DATA MAPPING – This project is in its formative stage, designed to document community standards around data mapping in response to the Senior Executive Accountability Regime (SEAR) in Ireland.

Project Trustees are Rachel McAdams and Eoghan Kenny and is actively seeking contributors.

PROCESSING SPECIFICATIONS - This project was launched to update the processing stage of the EDRM. Organized in concert with John Tredennick, Founder of the Merlin Foundation, this EDRM project will build processing specifications such as de-NISTing, de-duping and other functions.

DATA SETS - This project, in its formative stage, seeks to update and increase the number of datasets available to the community. Project Trustee is Cash Butler, CEO & Founder of Clarilegal.

STATE E-DISCOVERY RULES - This project, in its formative stage, seeks to create a central resource for state eDiscovery Rules. Project Trustee is Suzanne Clark, Discovery Counsel, eDiscovery CoCounsel.

EDRM REVISION – Recognizing that the EDRM model has not had a refresh in some time, the project focuses on updating the underlying documentation of the EDRM model to reflect changes in technology, process, and the law. Project Trustee is Tara Emory and open for new contributors.

GDPR PROJECT – The project team is working toward developing a code of conduct for cross-border discovery under the EU General Data Protection
Regulation. EDRM formed the team in August 2017 to examine GDPR and develop guidance for becoming GDPR compliant, particularly with an eye toward the regulation's impact on cross-border discovery. Initially focused on data transfers from Ireland to the U.S., the guidance is aimed at mitigating some of the risk that international litigation teams and e-discovery practitioners face when balancing U.S. discovery obligations against European data privacy laws. Project Trustees are Dave Cohen and Jim Koziol and has limited opening for new contributors.

**IGRM** – The Information Governance Reference Model was initially created to frame the discussion of information management, in the same way the Electronic Discovery Reference Model functions for e-discovery. The project focuses on updating the IGRM model as well as recognizing the interconnection between this project and the Maturity Assessment project. Maturity is measured in part by reviewing the level of collaboration among key stakeholders which is at the very core of excellent information management. New Project Trustee is Eric Sedwick and are seeking new contributors.

**PROPORTIONALITY** – The project’s goal is developing a template, which provides a common analytical framework for lawyers and the court to use when presenting and considering a proportionality assessment in litigation. This tool will focus on the six proportionality factors, especially factor six, which weighs burden and expense against benefits. The factors are laid out in Fed.R.Civ.P. 26. Project Trustee is Michael Shortnacy.

**COMP SCI/STOP WORDS** – The project’s goal is developing glossaries and resources to explain basic computer science terms and principles and to compile a list of common “stop words” used in e-discovery and the complications that may arise from using them. Project Trustee is Douglas Forrest and is open to new contributors.

**PRIVILEGE LOGS** – A privilege log is a record of the responsive or relevant documents that are being withheld from production on a claim that they contain attorney-client communication, attorney work-product, or trade secrets. The purpose of the project is developing best practices that most efficiently accomplish the task, including consideration of possible rule amendments. Project Trustee is Janet Bryan.

**ARTIFICIAL INTELLIGENCE** – Artificial Intelligence is a wide ranging and pervasive methodology reaching all areas of life. The project explores its use in litigation and how it will continue to develop. The project explores and develops opportunities to educate lawyers and judges on the role of AI in litigation. Project Trustee is Kelly Atherton and is open to new contributors.

**EDISCOVERY MATURITY ASSESSMENT** – The project has developed an interactive tool to measure a company’s e-discovery management based on the EDRM maturity model, which was developed several years ago. It fosters a simpler first analysis of an organization’s eDiscovery maturity and hopefully leads them into a deeper analysis, which is provided by the more detailed EDRM maturity model. It is under ongoing analysis and can be found here.

**TAR PROJECT** – The project seeks to improve the administration of justice by establishing authoritative guidance that the bench and bar can rely on with confidence and by providing guidance on how best to use TAR and under what circumstances. This document has been completed and can be found here.

The EDRM Global Advisory Council 2020 provides input and expertise to forward EDRM projects and mission. With Advisors hailing from South Africa, Ireland, the Netherlands, Australia, Canada, Brazil, Japan, UK, Switzerland, India, Israel and throughout the US, the multidisciplinary group includes judges, attorneys, IT professionals, litigation support professionals, security, paralegals and info gov
professionals from government, corporation, plaintiff and defense law firms, service providers, consultants and educators.

You can find the entire Global advisory Council listing here: https://www.edrm.net/about-us/edrm-advisory-council/

Our partners make everything possible. The EDRM Global Community is grateful to:

**Guardian Partners:** Xact Data Discovery, Compliance Discovery Solutions, Everlaw, Zapproved

**Foundational Partner:** Bolch Judicial Institute

**Defender Partners:** OpenText and Exterro

**Preserver Partners:** Canopy Software, ZyLAB, Clarilegal, iCONECT, The CJK Group, Cellebrite, LexTrado & UnitedLex

**Bedrock Partners:** LDM Global & HaystackID

**Marketing & PR Partner:** Edge Legal Marketing

**Alliance Partners:** La Touche Training, Merlin Legal Open Source Foundation, Saya University

**Talent Partner:** Legal Tech Talent Network

**Legacy Partners:** eDiscovery Daily, Women in E-Discovery and ACEDS.

The current partner listing is here: https://www.edrm.net/about-us/partners/

**Opportunities for participation:**

The EDRM is open to all, and there is no cost to contribute to a project or attend webinars.

Join a project team, become a partner, sponsor, and participate in our upcoming June 25-26 2020 Virtual Summit/Workshop.

Visit www.EDRM.net, and subscribe to our opt in email list, or send us a direct email at info@edrm.net for more information and to get involved and make a difference as an #EDRMStandOut.

**Company Description**

Our business was founded in 2002 in Australia by Jo Sherman, a lawyer and computer scientist who has for many years applied her business acumen to technology innovation in the legal sector. Since then, we have expanded internationally as we focused on development of robust, scalable software to manage eDisclosure, litigation and investigations. We recently established an office in New York City, to provide a base from which we are now servicing the North American market.

The EDT team comprises lawyers, software engineers and forensic experts who are committed to a core software design philosophy; Simplicity. This approach ensures our software is easy to use, without compromising features, and prevents complexity and over-engineering. We also collaborate with leading edge litigation support technologists, service provider partners, forensic experts and investigators from within our client base to ensure our technology and architecture continues to meet their evolving needs.

Over the last decade, EDT has grown to be trusted by an international blue-chip client base including GLOBAL 100 law firms, top tier accounting firms, corporations, government agencies, forensic experts and consulting service providers. We anticipate continued growth due to our unique value propositions - simplicity, adaptability, complete end-to-end functionality and flexible deployment options.

We have offices in the UK, Australia, the US, Canada and Israel.

**Vendor Offerings**

EDT is a cutting-edge legal software platform for eDisclosure, litigation and investigations.

At EDT we think eDisclosure has become over-engineered and ineffective, inflating the costs of litigation and investigations.

EDT puts a stop to that by integrating data processing, analytics, review and production on one, easy-to-use, affordable platform that can also be used to prepare for trial and present in court.

EDT integrates eDisclosure activities end-to-end from processing to analysis, review, production and presentation in court. Finally, you have all the features you need to run your whole case end-to-end without any data movements, saving time and money and reducing complexity. Many international law firms, regulatory agencies, corporations and service providers use EDT as a complete end-to-end solution.

Others use EDT for processing and Early Case Analysis, exporting culled data into load files for third party review platforms.

**Company Description**

Epiq, a global leader in the legal services industry, takes on large-scale, increasingly complex tasks for corporate counsel, law firms, and business professionals with efficiency, clarity, and confidence. Clients rely on Epiq to streamline the administration of business operations, class action and data breach services, court reporting, eDiscovery, regulatory, and compliance matters. Epiq subject-matter experts and technologies create efficiency through expertise and deliver confidence to high-performing clients around the world.

Epiq provides global support to corporate and legal entities with a wide range of legal support services, partnering with clients to manage collection, processing, hosting, review and analysis of material for large and complex matters.

The size and scope of our operations, alongside our industry expertise allows Epiq to provide an end-to-end service, with solutions across all stages of the eDiscovery process.

The Epiq platform extends to 14 countries, including more than 80 office locations, more than 5,000 employees and a dozen data centres across the globe serving our clients. Epiq helps law firms, corporations, financial institutions, and government agencies manage complex, large-scale data sets and requirements of eDiscovery, bankruptcy, class actions, court reporting, regulatory, compliance and other critical legal tasks. In the U.K., Epiq works with 5 of 5 Magic Circle firms, and 17 of the 20 largest law firms. In the U.S., Epiq works with 48 of the 50 Am Law firms.

Epiq co-located data centers are SSAE 16 and ISO 27001 certified, all with hardened exteriors sitting on dual power grids, employing generator backup and 24/7/365 closed circuit and manned monitoring. Project managers coordinate with global teams to provide seamless, reliable, around-the-clock client support.

**Vendor Offerings**

**eDiscovery Services**

Epiq offers a breadth of eDiscovery solutions, including data collection, forensic analysis, processing, hosting, document prioritisation and production. We offer clients a single point of accountability for all eDiscovery needs.

- **Data Collection:** Epiq is uniquely equipped to handle worldwide projects—we have experts around the world, the ability to deploy teams on-site globally, and the experience to navigate through country-specific data protection laws. Epiq provides onsite or remote collection services to law firms, corporate and government clients and our certified forensic examiners are highly skilled investigators trained to execute defensible evidence handling procedures. Epiq's Forensics and Information Governance teams work with clients to set up repeatable, defensible, and efficient preservation processes. Preservation processes incorporate both third party and native tools, depending on the target data source, and we are able to collect data from disparate sources including mobile devices.

- **Processing:** We process more data globally than any other eDiscovery provider. This experience and scale allows us to solve the industry’s most challenging data problems on behalf of our clients.
• Hosting: Epiq currently has 12 data centres worldwide in which it can host client data.
• Client data will be maintained in locations as determined during project planning, and in accordance with regulatory requirements. Epiq offers both DMX and Relativity, two of the leading document review platforms on the market.
• Document Prioritisation: Epiq’s document prioritisation services and software, proprietary hosting and predictive coding solutions are available globally and can be deployed on-site.
• Production: High-volume capacity and a wide range of subject-matter expertise.

Managed Services
Managed Services offers a holistic, enterprise-wide approach to eDiscovery. It eliminates the need to shoulder the upfront costs of purchasing hardware and software. Epiq provides every capability needed to reliably perform eDiscovery. — software, hardware and processes—but most importantly, we provide the workflow management to make these capabilities work together. Epiq works with our clients to design a managed services package to suit their capacity and workflow requirements at a fixed monthly cost.

ArqSM is your own hosting environment for a fixed monthly fee: it eliminates the need for large, initial capital expenditures for hardware infrastructure or software licenses. The Arq platform includes unlimited use of email threading, near de-duplication, clustering and predictive coding. With Arq, a single dashboard provides administrative control over cases, users and security. Additionally, you get instant reporting on storage, users, custodians and attorney review speed and quality. Arq gives you one of the best review applications on the market at a predictable cost and without an upfront investment in hardware or software.

Professional Services
Our global consulting team offers expert services in discovery preparedness, litigation and practice support, litigation and dispute services, records management, early case assessment (ECA) and information governance. We also have expert services available in law department strategy and technology planning and implementation.

High-quality project management
Epiq offers best-in-class project management with more than 260 dedicated client support individuals working in a team-based environment globally. Epiq’s project management and client services teams have extensive experience of supporting clients and their consultants and in aiding them with the development of new workflows for all elements of the eDiscovery process. Epiq assigns a committed project management team to the client to provide service consistency across cases and catalyse the development of cost saving, risk reducing standards of practice and case workflow.

Predictive Coding (TAR)
Alongside our deep technology expertise, Epiq provides best-in-class TAR solutions including Relativity Analytics, NexLP, and Brainspace. We support these with a team of 9 TAR consultants to ensure our clients achieve the best outcome from TAR workflows. All of the technologies we support have been defensibly deployed in cases in the jurisdictions of the UK, Ireland and the United States. For all projects we are able to provide a report describing the technologies deployed, the methodologies used, and an explanation of the results of the process. If required, we are able to provide export testimony to support the technologies and processes used.
The technologies we support provide the following TAR capabilities:

- Predictive Coding - TAR 1.0 (SAL) and TAR 2.0 (CAL)
- Concept searching
- Categorisation
- Clustering
- Email threading
- Near duplicate analysis
- Visual Communications Analysis
- Sentiment Analysis
- Domain Analysis

**Epiq Global Solutions**

To facilitate eDiscovery services for our clients on a global scale, Epiq currently has operations in the following countries:

- Asia: Hong Kong, Japan, China, Singapore and India;
- Europe: UK, Germany, and Poland;
- North America: United States (multiple locations) and Canada;
- Australia

**Epiq Document Review Services**

Our document review services enable our corporate clients and/or their outside counsel to outsource to us some or all of the tasks associated with reviewing document collections in an eDiscovery project. This includes:

- Interviewing and hiring qualified legal professionals for limited-duration document review work.
- Providing guidance to the client’s outside counsel regarding best practices throughout the review process. Examples include reviewing the document review protocol and coding form if requested.
- Providing review project management services.
- Providing technology training to the review legal professionals.

Epiq provides review services in our secure facilities in London and in Frankfurt, throughout the United States, Hong Kong, India, Tokyo, and Toronto. We have more than 2,000 seats available worldwide.

We make extensive use of a variable workforce for document review engagements and only bring on staff as projects commence. The review team may range from a few legal professionals to several hundred legal professionals at a time. We have provided review services for over 40 languages and for many different types of files e.g. audio and chat.

Document reviewers generally work from our secure document review rooms designed to protect the confidentiality of our clients’ sensitive data. Our security measures extend to both the technical and physical environments (e.g., neither removable storage media nor printers are used in the review pods, no personal belongings are permitted in the review rooms).
Court Reporting

Epiq leverages cutting-edge technology and global resourcefulness to help you more efficiently manage your transcription needs.

More than 10,000 corporate and law firm clients draw on our vetted network of 5,000+ court reporters to generate north of 8 million pages of transcripts annually. As the legal process moves from complexity to clarity and through to finish, Epiq’s resources and experience help you streamline your transcription requirements to save time, money and energy—night and day, around the world.

Real-time reporting

Real-time court reporting provides users with a live, verbatim record of legal proceedings as they happen. Text is sent directly to laptops in the hearing room so that users can annotate transcripts according to issues specific to their case. Users are also able to create customised searches and annotation reports across multiple hearing days, allowing all results to be consolidated into one document.

For complex proceedings involving multiple parties or large amounts of evidence, real-time is of particular benefit, especially where information needs to be shared with team members based in multiple locations:

- Reduce preparation and court proceedings time by up to 25 per cent
- Search, view and annotate transcripts
- Create reports of annotations and search results across transcripts

Real-time court reporting services are used in the world’s most high profile cases and are available as a desktop or web-enabled version for access on laptops or iPads in the hearing room or remotely. Full training, technical support and equipment are provided throughout the lifecycle of a case.

Daily reporting

For shorter hearings, where you may not require real-time reporting but still need a transcript quickly, Epiq can produce a verbatim record of proceedings at the end of the day, usually within two to three hours.

Electronic Presentation of Evidence (EPE)

Electronic Presentation of Evidence refers to the in-court display of documentation, files, pictures, audio and graphics during trial, displayed onto multiple screens for all parties to view.

The use of EPE aids counsel in delivering an effective and compelling presentation, and it is estimated that its use results in a saving of approximately one third of court time.

Epiq supplies all relevant hardware and software where EPE equipment is not already installed in the courtroom. An independent operator, provided for the duration of the hearing, will control the display of evidence using specialist trial presentation software, and annotate and enhance on-screen images in accordance with the parties’ instructions. All EPE operators are carefully selected and provided with training to work efficiently and confidently in the often pressured environment of the hearing room.

**Company Description**

EY has over 2,500 forensic technology professionals operating across our global network. We have 57 forensic labs and 18 forensic data centres allowing us to provide global scale and flexibility. These capabilities allow both large and small clients to access EY’s suite of eDiscovery services. Our deployment models enable everything from temporary capacity addition to long term, high volume activity, and clients can leverage our “follow-the-sun” services as well as dedicated in-country capability.

**Vendor Offerings**

The diversity and dispersion of digital information continues to grow even while the legal and regulatory environments become more challenging. Organisations are seeking end-to-end discovery solutions to help them manage legal and compliance risks and to reduce costs. From pre-litigation information management to post-matter data disposition, our team’s qualifications, experience and scale enable us to offer services across the entire discovery life cycle. Our discovery, information governance and forensic professionals can help answer the “who, what, where, when and how” questions and meet clients’ discovery and compliance needs.

- **Discovery**: Using market leading software, EY provide eDiscovery services across the full spectrum of the EDRM from collection through to production. The development of customised workflows to identify and integrate diverse data sources allows for the richest and most informative data landscape. Using applications such as Brainspace and bespoke tools for network and communication analysis and the more sophisticated sentiment analysis, EY can provide clients with a powerful early understanding of their data. Web-based review capability is provided through Relativity 10, with mobile platforms available where data protection or privacy regulations require.

- **Managed Document Review**: EY offers a scalable and flexible resourcing model providing managed document reviews that are fully integrated with EY’s review platform. Led and managed by permanent qualified lawyers and investigators, EY can develop and implement data and document review protocols that focus on cost efficiency, implementing analytics and custom workflows to assess review quality and reduce review time. Our experience is both functionally broad but also industry specific. Upholding repeatable and consistent quality control processes, we use this experience to assist in designing workflows supported by the latest analytics and leveraging our extensive experience with various TAR applications including EY’s own predictive coding technology applications and customised linguistic-based solutions. With EY’s acquisition of Thomson Reuters’s Managed Legal Services division (formerly Pangea 3), we have further bolstered our core document review service team with over 500 professionals in our onshore and offshore locations. These experts further empower EY to deliver high-
quality and consistent service. EY is now the largest Legal Managed Review Service provider.

- **Discovery Consulting:** EY formulates strategies to securely process and transfer data as per the applicable data protection and privacy regulations and laws (e.g., GDPR). Existing eDiscovery and information governance programs and procedures can be assessed and improved, balancing in-sourcing and outsourcing arrangements as necessary.

- **Innovation:** Alongside our developers and data scientists, EY’s eDiscovery team develop custom tools and solutions to address unique client needs. Rooted in the foundations of traditional eDiscovery, these tools and solutions have been deployed to support compliance monitoring and contract analytics.

- **Data Analytics:** EY’s deep technical capability means that we can apply analytics and AI technologies to eDiscovery engagement, providing increased efficiencies and delivering valuable insights. EY has designed and built in-house technology-assisted review tool, and has the subject matter know-how to develop custom methodologies and workflows to meet each client’s specific needs. Using advanced data analytics and visualisation tools, EY can develop reports and dashboards to help legal teams gauge performance, progress and effectiveness of the eDiscovery process in an holistic manner. Working together with our eDiscovery experts, our Data Analytics team, (comprising experienced data engineers, data scientists, solution architects, Data Ops programme managers and statisticians) extract and deliver descriptive/predictive/prescriptive analytics on structured and unstructured data. In this way, we provide unique intelligence and value in litigation, investigations and regulatory responses.

- **Legal Managed Services:** EY can take away the challenges of day-to-day eDiscovery management by providing a Legal Managed Service. Available for all or just part of the eDiscovery process, the service can be tailored to the specific requirements of each client and can support an entire portfolio of matters.

Company Description

Exigent is a technology provider and consulting organization that is breaking industry boundaries and raising the bar for data-driven decision-making. Through a powerful combination of technology, analytical thinking, and financial acumen, Exigent’s multidisciplinary team develops SaaS solutions to drive change in business and beyond. With a track record of shaking up the legal sector through the use of contract data and process optimization, Exigent provides businesses with the questions and answers they need to make the most of the digital disruption.

For more information, please visit us at: www.exigent-group.com

Vendor Offerings

LEGAL SERVICES

Exigent Legal Services combines the very best legal minds with smart technology and business acumen. Our services will give you and your team more time to focus on your core strategic objectives and achieve greater efficiencies.

We deliver legal services that allow your team to focus on more valuable work inside the organization and create cost savings.

Exigent's skilled legal professionals offer the support which corporate legal departments and law firms need so that their staff focus more hours on higher-value tasks:

- Legal services including contract review, due diligence, e-discovery and information governance, corporate compliance
- Immigration
- Medical legal services
- Outsourced legal administration
- Forensic Consulting

Technology

Exigent’s technology solutions offer practical, powerful tools that, paired with the right people, turn data into a smart asset that can create opportunity and value that includes:

- Contract management software;
- Business analytics software;
- Document creation software; and
- Legal spend and matter management software.

Consulting

Exigent's experts understand your business. We combine powerful data tools with our expertise to give you actionable insights and guide you through how this information can answer the company’s business needs.
Our consulting services include:

- Legal department optimization;
- Legal spend analysis; and
- Contract optimization analysis.

**SOFTWARE:**

**Exigent Contract Management**

Exigent’s Contract Management System is an end-to-end AI-powered solution built for speed to smart data. With a machine learning engine, our software auto-extracts contract data with astounding accuracy and runs contextual searches in milliseconds. With this level of access, you can manage obligations, prevent revenue leakage, mitigate risk, and transform your data into opportunity and value.

Exigent’s AI auto-extraction tool, Scarlett, is powered by a team of lawyers, financial experts, and data scientists, so we only deliver the data that matters fast. Our tool auto-extracts contract data from across your business, aggregates it and visualizes it to give you unparalleled levels of actionable analytics. Faster better data means you can make informed decisions to impact your business performance.

**Key features:**

- Secure, centralized contract repository: our suite includes contract management modules that provide a powerful centralized display of organization-wide information. This gives you visibility across your contract portfolio, including family and amendment views, and related documents feature that instantly highlight areas for concern, mitigating risks.

- Live alerts and reports: receive real-time alerts to manage contractual obligations and milestones such as price review triggers and ensure contract renewals are executed on time with automated user-friendly reports reducing risk and improving terms.

- Customizable, captivating data visualization: our easy-to-navigate dashboards are fully customizable and allow you to see key terms and conditions, and amendments. You get visibility into your entire contract base providing a holistic view of metrics and key performance indicators (KPIs). This highlights areas of concern, mitigating risks and ensures you make better, more informed decisions.

- Cross-departmental dynamic data configuration: our AI tool is multi-purpose and can be used across the legal, sales or procurement departments. It can auto-extract, amalgamate and analyze data, removing silos of data from across the business and giving you a greater perspective into your entire organization.

- Smart search, smart data: our Google-like search allows users to find fast answers across large portfolios of agreements or documents. This cognitive and contextual searching feature uncovers relevant phrases, sentences, and paragraphs in a document that would otherwise not be discoverable and delivers results in milliseconds. This is unparalleled compared to the manual review many organizations use.

- Cutting edge AI and auto-extraction: our machine learning tool is trained by highly experienced lawyers, so our auto-extraction technique is more accurate than any generalist AI solutions. This means you have the right
data, when you need it, increasing efficiencies and driving greater opportunity to provide value across the business.

**Key benefits**

- **Accelerate your time to data**: our AI-powered auto-extraction tool gives you key data points in seconds and insights in days rather than weeks, improving accuracy and quickly reducing manual repetitive contact management tasks.
- **Prevent revenue leakage**: with real-time alerts when price reviews are triggered, enforce your contractual obligations and ensure contract renewals are executed on time.
- **Use advanced analytics**: to make better decisions using the collated and curated data from across your organization, you can make more informed decisions that help you achieve concrete financial benefits.
- **Maximize impact**: through compelling, customized data visualization: visibility across your contract portfolio and easy-to-read dashboards give you access to crucial business analytics that predict complications and empower growth.
- **Mitigate risk and convert residual risk into value**: by seeing the data from across your business. Eliminating the risk of lost contracts due to theft or destruction of physical assets with a centralized, accessible and searchable digital contract repository.
- **Streamline internal operations**: with well-structured contract data and timely reminders for upcoming deadlines and obligations.

**Business analytics software**

Exigent’s business analytics software is a powerful, web-based, on-demand analytics solution that analyses extracted contract data to create meaningful interactive reports and dynamic integrated dashboards. These reports share business intelligence and insights directly to your desktop, tablet or smartphone anytime, anywhere, to key stakeholders in your organization.

**Key features:**

- Speed of analysis;
- Interactive data visualization;
- Visual discovery;
- Architecture agnostic;
- Real-time collaboration; and
- Centralized data.

**Key benefits**

- Powerful reports are specifically designed to capture granular information in the complex contracts and the inter-relationships which enable smart decision-making.
- Monitor contract milestones and risk markers, easily locate and search for terms and study trends across all your contracts, helping to quantify the contract value.
- In a crisis, quickly access the key information management needs to determine a course of action.
• To better discover, analyse and act on contracts throughout the organization to improve performance and agility, while reducing risk and cost.

• Enable deeper insights and discover business challenges, thus improving procurement efficiency, developing marketing strategies and supporting business growth.

**Document creation and workflow solution**

Exigent provides a custom-built solution on Microsoft 365 that involves contract drafting and editing, approvals and signature through DocuSign.

**Key features**-

- Template-based contract creation
- Manage multiple templates and document versions
- Approval flows
- Enables the user to send out appropriate document out for e-signature through the system
- Role-based access
- System reporting
- Basic search functionality
- Integration with obligation management systems

**Key benefits**-

- Operational efficiency: accelerated speed to build standard contracts.
- Risk reduction: transform the most complex documents into intelligent, interactive templates allowing document authors to control the data used to populate and generate customised documents.
- Enhanced compliance: internal compliance and external regulation can be applied as part of the template creation process, ensuring that all documents generated automatically conform to an organisation's governance procedures.
- Management of contracts: the generated contracts can be stored in the obligation management system, allowing an organization to have full control of its contracts.
- Collaborations: The communication tools built into your workflow automation system is an extraordinary tool for team collaboration.

**Legal spend and matter management software**

Exigent's legal spend and matter management software comprises three platforms: a matter management system which allows businesses to track and manage their legal matters online; an e-billing system for external vendors, which allows tracking of legal spend and provides the business with accurate spend analytics; and an administrative platform which allows site administrators to perform high-level site maintenance. The cloud-based system is designed and built with the sole purpose of improving the way corporate businesses manage legal matters and pave the way for true legal insights and spend analysis.
### Features:

**Matter management:**
- Full administrative control for customization and maintenance
- Matter versioning
- Time recording
- Creation of instructions to external vendors
- User type-based dashboards
- Spend, rebate and matter reports
- Oversight over business
- Invoice auditing to check for discrepancies in billing
- Tasks for managing the predefined invoice process
- Dashboards for accounts users to manage their tasks
- Automated predefined tasks for efficient turnaround times on invoicing

**E-billing:**
- Invoice submission
- Credit note submission
- Invoice search
- User alerts
- Checks if an invoice has already been submitted
- Marks instruction as closed once a final invoice is submitted
- Notifies user of rejected invoices that need to be credited
- Lists active instructions with essential billing information and
- Displays invoicing rules specific to each client's requirements

**Benefits:**
- Improved control and overview of legal matters
- Reduced work load and improved team efficiency (reduce internal costs)
- Improved relationship with legal service providers (improves collaboration)
- Reduced legal spend
- Increased rebates
- Advanced data security

**Company Description**

Exterro was founded in 2004 with the simple vision that applying the concepts of process optimization and data science to how companies respond to litigation would drive more successful outcomes at a lower cost. With software solutions that span the full e-discovery lifecycle and support information governance initiatives, Exterro helps some of the world’s largest organizations work smarter and more efficiently.

**The Preferred Choice of the Fortune 500**

60% of Exterro’s clients belong to the Fortune 500 and include such notable brands as Barclays, AstraZeneca and Siemens. These discerning global companies rely on Exterro to meet their unique and complex e-discovery and information governance requirements. Our clients extend across every major industry, including the healthcare, finance and energy sectors.

**A Recognized Market Leader**

Exterro is recognized by industry analysts as one of the top software providers in the market. Among other industry recognitions, Exterro was positioned in the Leaders Quadrant in Gartner's Magic Quadrant for E-Discovery Software in 2013, 2014 and 2015 and is ranked in the current Leaders Quadrant in G2 Crowd.

**Extensive Partner Network**

Exterro partners with a variety of leaders in the legal technology and service provider/consulting industries. Technology partnerships in areas like matter management, HR systems, archive solutions and other content repositories enable Exterro customers to utilize previous investments while still integrating next-generation Exterro technology. Service and consulting partnerships allow users to leverage proven e-discovery experts to successfully implement and manage Exterro's software.

**Vendor Offerings**

Exterro Orchestrated E-Discovery enables customers to manage, measure, and optimize e-discovery processes, unifying all e-discovery phases and all internal and external stakeholders on the same technology platform. Information is available anytime, from anywhere. The result is that clients are able to defensibly complete the e-discovery process in far less time and at a much lower cost.

Exterro software solutions that can be deployed on premise or in the cloud:

- EXTERRO DATA MAPPING
- EXTERRO LEGAL HOLD
- EXTERRO OFFICE 365 EXPLORER
- EXTERRO E-DISCOVERY DATA MANAGEMENT (ECA / COLLECTION / PROCESSING / REVIEW/PRODUCTION)
- EXTERRO PROJECT MANAGEMENT
- EXTERRO EMPLOYEE CHANGE MONITOR
- EXTERRO FILE ANALYSIS

| FRP Advisory (“FRP”) is a business services firm providing restructuring and insolvency services, pension advisory, corporate finance, and forensic accounting and technology services.  
The firm was formed in June 2010 and has approximately 300 staff and over 45 partners.  
Our Forensic Services team are highly experienced forensic accountants and forensic technologists, working closely together to provide a full-service offering. We are instructed to provide independent, objective advice in the context of investigations and disputes. |

<table>
<thead>
<tr>
<th><strong>Vendor Offerings</strong></th>
</tr>
</thead>
</table>
| FRP offer services across the entire electronic disclosure process, from assistance with data mapping and identification, through forensic data capture, document review and disclosure. Consultancy is central to our approach, whether providing services internally to assist with investigations, or proactively working with clients to assess the most cost-effective approach for each case.  
Drawing on many years of experience of capturing data from a variety of friendly and hostile environments, the data collection team at FRP ensure that the correct protocols are followed such that the process will stand up in court if required. We also have the skills to carry out in-depth forensic investigation of devices.  
Our team have worked on cases ranging from Subject Access Requests containing a few thousand documents, to multi-million document, multi-jurisdictional cases. The web-based interface of our document review tool, Relativity, provides access rapidly, while two-factor authentication and trusted IPs offer peace of mind that data security is at the forefront of our service. Our knowledge of Relativity is underpinned by the certifications held by our team, including Relativity Certified Administrator, Analytics and Processing.  
Once a document review is complete, we can create bespoke disclosures to a variety of regulators, government agencies and other third-party providers.  
FRP use market leading software for every step of an electronic disclosure case, selecting the most cost and time efficient tool for the task at hand. Our suite of capture tools include Encase, FTK, Oxygen Forensic, Macquisition, Cellebrite, VMWare Converter, together with a host of bootable utilities.  
For document review, FRP host Relativity 10.3, utilising in-built analytics on all cases to speed up review and bring the key documents to light more quickly in a visual manner. |

**Company Description**

FTI Consulting, Inc. is a global business advisory firm dedicated to helping organisations protect and enhance enterprise value in an increasingly complex legal, regulatory and economic environment. With more than 5,500 employees located in 27 countries as of February 2020, FTI Consulting professionals work closely with clients to anticipate, illuminate and overcome complex business challenges in areas such as investigations, litigation, mergers and acquisitions, regulatory issues, reputation management, strategic communications and restructuring.

FTI Technology solves data-related business challenges, with expertise in legal and regulatory matters. As data grows in size and complexity, we help organisations better govern, secure, find, analyse and rapidly make sense of information. Innovative technology, expert services and tenacious problem solving provide our global clients with defensible and repeatable solutions. Organisations rely on us to root out fraud, maintain regulatory compliance, remediate customers where wrong doing may have occurred, reduce legal and IT costs, protect sensitive materials, quickly find facts and harness organisational data to create business value.

More information is available at [www.ftitechnology.co.uk](http://www.ftitechnology.co.uk).

**Vendor Offerings**

Our complete range of offerings, from forensic data collection to managed document review services, provides unprecedented flexibility to address any discovery and remediation challenge with confidence. Clients rely on our software, services and expertise to address matters ranging from internal investigations, customer and data remediation through to large-scale litigation with global e-discovery requirements. These include:

**Collections and Computer Forensics:** We help organisations meet requirements for collecting, analysing and producing data from a variety of sources, including e-mail, voicemail, backup tapes, social media, the cloud, shared server files and databases—often on multiple continents. We provide both proactive and reactive support using expert services, and defensible methodologies and tools that help companies and their legal advisers understand technology-dependent issues.

**E-discovery Management:** Our managed services reduce costs, provide greater budget predictability and transparency while reducing the need for internal technology investments. Through a master data repository, materials are processed once then can be used across multiple matters, enabling the reuse and retention of valuable work product such as privilege calls.

**Predictive Discovery:** Predictive Discovery is a service offering that combines legal expertise, statistical quality assurance and advanced technology in one comprehensive solution. It provides you with the benefits of predictive coding technology and the confidence that the project will be completed in a cost-effective and defensible manner.
Managed Review: With our managed review offering, you can meet deadlines, stay within budget, and trust the quality of the review. Our managed review offering ensures that you can seamlessly scale to handle any matter with high-quality review lawyers, using expert workflow and advanced technology.

Technology Consulting: We work with our clients to develop strategic programmes which are designed to reduce enterprise risk while improving the daily flow and management of critical information. We help our clients carry out a defensible and robust process for e-discovery and data remediation that focuses not only on the technical tools, but also on the policies and procedures that support the process. Our team assist clients in managing any or all phases of the discovery lifecycle from identification through to production and potential remediation.

Nuix Discover: A complete and easy-to-use e-discovery and document review platform that delivers defensible, cost effective review with advanced analytics, visual document review and predictive coding, unparalleled scalability and robust production capabilities. With flexible workflows, nuanced security controls, intelligent reuse of data and multiple deployment options, Nuix Discover is as easy to manage as it is to use.

Relativity: We are a leading UK provider of RelativityOne, a scalable and secure version of Relativity. It is open and customisable, can be accessed from anywhere via a standard web browser, and is supplemented by applications built by our in-house development team. Our offering is at the front of the market as the most supported and developed version of Relativity by the vendor, and this ensures that our clients have access to the most up-to-date technology and the largest selection of tools available for their case.

Information Governance: We assist in developing, implementing and delivering information governance projects that reduce corporate risk, cut storage costs, secure data, improve the e-discovery process and enable faster and deeper insight into data. Our services are tailored to meet specific client needs, whether you need a trusted adviser to assist with evaluating a new technology, a quick data migration project, defensible deletion or a complete transformational service.

Radiance: An easy-to-use, scalable platform that allows organisations to connect, enrich, analyse and visualise millions of documents from disparate sources in a single, elegantly designed user interface. With a powerful search engine and a library of advanced visualisations – including social networking, communication patterns, concept clustering and timelines – Radiance can help organisations in a number of ways, including investigations, early data assessment and the identification of high-risk data, such as personally identifiable information.

Forensic Data Analytics: We maximise analytics to help underpin investigations as it can paint a more accurate picture. Deploying statistical techniques, formulating bespoke algorithms and utilising machine learning are all forms of analytics we utilise to help digest and unravel large volumes of data far more accurately and efficiently. The techniques deployed also provides a forensically sound approach and the methods are defensible on large-scale investigations and remediation.

Cybersecurity: Our offering focuses on the full spectrum, from proactive privacy/security to reactive investigation and post-incident recovery. We have world-class professionals with leading experience at the highest levels of government and law enforcement who have complementary skillsets and work as a single unit to benefit our clients.

Contract Intelligence: Due to the critical importance of contracts, a growing number of organisations are modernising their approach to these vital documents with FTI Technology’s Contract Intelligence service. Providing a cost-effective solution for a key component of contract lifecycle management, Contract Intelligence helps organisations better find, understand and act upon contracts to meet regulatory
requirements, reduce risk and recognise greater business value. FTI Technology does this by combining leading-edge analytics technology, advanced workflow, and attorneys experienced in reviewing contracts.

**Software License Compliance & Optimisation:** FTI uses a structured and strategic approach towards license compliance by improving processes, reducing license mis-calculations and driving predictive revenue through greater insights. We offer 4 key services depending on client requirement; Compliance assessment, Procurement Consulting, Dispute Advisory and Crisis Management License Optimisation. In addition to the above services, FTI also has its own enhanced delivery model and in-house add-on tools for deep-dive compliance insights into licensing of high-risk software publishers like Oracle and SAP.
8.1.43 Grant Thornton UK LLP

Paul Wilson
paul.r.wilson@uk.gt.com,
+44 (0) 20 7 865 2719
30 Finsbury Square | London | EC2P 2YU
www.grant-thornton.co.uk

Company Description

What starts out as an investigatory or regulatory problem very quickly becomes a hunt for information – who said what to whom, where that information is located and how to keep control of it when it can be moved around internationally, indiscriminately and at lightning speed. So how can lawyers, investigators and regulators make business decisions when the one piece of potentially critical information that they need is buried within a myriad of growing and disparate electronic data sources?

Grant Thornton is one of the world's leading organisations of independent advisory, tax and audit firms. More than 42,000 Grant Thornton people, across over 130 countries, are focused on making a difference to clients, colleagues and the communities in which we live and work.

In the UK, we are led by more than 185 partners and employ 4,500 of the profession's brightest minds to provide our clients with access to considerable sector knowledge and expertise. We provide assurance, tax and specialist advisory services to over 20,000 privately held businesses, public interest entities and individuals nationwide.

Our Digital Forensics teams are led by experts in their art, including a qualified barrister and solicitor with years of experience leading complex digital forensic and electronic investigations. Our team were invited to join the 2017-2018 Disclosure Working Group, with Grant Thornton helping to co-author CPR 31 on Disclosure Protocols and electronic evidence handling. Others in our team have worked to investigate and prevent national cyber-terrorist incidents, helped to build and lead the Royal Military Police computer forensic investigation capabilities, and operated in law enforcement. We have experience of processing and hosting material for investigations before the SFO, FCA, CMA and ICO amongst other courts and regulators.

Grant Thornton’s Digital Forensics Group offers computer forensic support to all of our service lines, ensuring that all data is handled with appropriate chain of custody processes and to the highest standards within our ISO 27001 certified laboratories. Our global reach and forensic technology centres across Europe, America and Asia ensure we are well placed to deliver on multi-jurisdictional cases or where knowledge of local regulations is required. Our team can be engaged in conjunction with an expert witness, as part of a wider investigation appointment or as a stand-alone engagement.

The team uses a combination of industry proven and state of the art technologies to handle and restore data from all manner of hardware systems, including computers, mobile telephones and embedded devices, and software and database systems including defensible transformation of structured and unstructured data.

Our Computer Forensics team sits along-side our Electronic Discovery team ensuring that there is seamless integration between electronic evidence handling and data processing, enabling both teams to address challenging data types such
as encrypted material or partially corrupt or deleted data that can be restored to an evidential standard.

With data review being the single largest cost in any investigation or litigation support process, our Digital Forensics team can ensure that time is spent focusing on only the most critical information – **reducing volumes, review time and cost** - with the ultimate aim of assisting our clients in achieving the desired result.

### Vendor Offerings

Our computer forensics and eDisclosure team provide assistance to clients on a wide variety of reactive litigation, investigation and regulatory compliance matters as well as proactive risk mitigation reviews. When faced with locating, preserving, searching and reviewing often vast quantities of data from disparate sources, our experts can assist and adhere to the core ethos that it is not simply the tools and technologies used to support the process, but the manner in which they are supplied which can truly make the difference.

#### Computer Forensics

Grant Thornton’s Cyber Defence Centre has a dedicated Cyber Incident Response and Computer Forensics team which is available 24 hours a day to collect data and investigate and contain data breaches and cyber-attacks. Our team can also engage separately to support operational and infrastructural cyber resilience including deploying our Security Operations Centre for live, real-time threat detection and response. We have years’ of experience responding to breaches in international banks, critical national infrastructure, cross-jurisdictional crises including WannaCry and (Not)Petya, and investigating and inoculating cyber-attacks and malware within the NHS, universities, schools, and corporates of all sizes.

Grant Thornton’s Digital Forensics team also supports and is supported by the largest team of dedicated asset tracing specialists in the UK, allowing us to offer end to end solutions in the investigation of a fraud including collection and processing of electronic evidence, managed reviews by subject matters experts in the commission of fraud, and dedicated experts able to trace and recover assets internationally. **We provide consultancy on block-chain asset-tracing and forensics on cryptocurrency wallets.**

Our solutions make use of best of breed technology and our services are fully UKAS ISO/IEC 27001:2013 security certified, providing our clients with the confidence that their data will be handled and stored securely and sensitively.

#### eDisclosure Services

We provide secure hosted eDisclosure solutions and consultancy advice, enabling our clients to perform early case assessment, simple and complex searching, data analytics, review, redaction, categorisation, and production of data in line with their matter specific requirements. Our team includes ten RCA accredited Relativity administrators, three Relativity Experts, and one Relativity Master, along with extensive experience, skill, and knowledge of other eDiscovery platforms. We use a range of AI and Analytical tools, and provide foreign language analysis, audio analysis, PII analysis, financial data modelling, and other capabilities, all integrated into our Electronic Disclosure workflow.

Blending our experience, technical knowledge, and solutions enables our clients to **quickly and effectively reduce the volumes for review.** This invariably **saves both time and cost.** Our services include a **managed review** capability, leveraging first-pass reviewers along-side subject matter experts, to offer a cost-effective and time efficient review.
Our services allow for electronic data received from our clients or collected by our computer forensics experts to be fully processed, de-duplicated, filtered, and indexed. Data is presented within user-friendly and feature-rich web-based interfaces, which require minimal training and allow our clients immediate access to search, analyse, and review their data. In-built functionality includes a host of data and text analysis tools for email threading, near duplicate detection, clustering, conceptual searching, categorisation and technology assisted review (TAR).

With paper documents still a factor in some cases, we also offer document scanning and coding services to present original paper material alongside any electronic data within the same eDisclosure platform.

Technology

We work with our clients to discuss their requirements in order to select the best solution for each matter. Our team makes use of a range of market leading and best of breed eDisclosure and Forensic software as mentioned above. We also employ other specialist redaction and translation/transcription tools such as Blackout and Systran.

In addition our experts use the best solutions available for forensic acquisition and analysis, including Access Data Forensic Toolkit (FTK); Guidance Software EnCase; and a host of cutting edge utilities, tools and artificial intelligence platforms to meet the particular needs of our clients.

- ESI Assessment and Analytics
- ESI Hosting
- Managed Services
- Legal Discovery Consulting and Management

**ReviewRight Services** help you learn from your data to make the right decisions for positive and quality investigation and litigation outcomes.

- ReviewRight Match (Reviewer Qualification and Sourcing)
- ReviewRight Translate (Foreign Language Review)
- ReviewRight Manage (Managed Review)
- ReviewRight Host (Review Hosting)
- ReviewRight Automate (Technology-Enhanced Review)
- ReviewRight Virtual (Secure Remote Review)

*These services are enabled and augmented by a combination of best-of-breed and proprietary technologies to support your technology requirements.*

**Core Software Platforms**

- **Relativity**: Industry-leading eDiscovery and review hosting platform.
- **Brainspace**: Industry-leading analytics platform.
- **Nuix**: Industry-leading compliance and eDiscovery platform.
- **ReviewRight**: Proprietary software and database designed to streamline the assessment and selection of document review contract attorneys.

**Core Software Enablers**

- **DataThresher**: Proprietary interface designed to streamline culling in industry leading eDiscovery processing and analytics platforms. (Interoperability with Relativity and Brainspace)

- **Electronic Common Technical Document (eCTD) Review Module**: Proprietary review module designed to preserve the integrity and security of files being considered as part of complex regulatory reviews typically associated with FDA audits, investigations, and reviews. (Interoperability with Relativity)

- **Relativity Cellebrite Integrator**: Proprietary tool that streamlines fact harvesting of unstructured data formats from mobile devices and enables extracted data to be searched, reviewed, and produced within an industry standard review and document production workflow.

- **Technology-Enhanced Review**: Proprietary combination of technology and processes designed to streamline technology-assisted review and predictive coding.
8.1.47 **Heureka Software, LLC (US)**

**Tim Steele**

*tim.steele@heurekasoftware.com | +1 330-730-7250*

8000 Walton Parkway, #234 New Albany, Ohio 43054 U.S.

*[www.heurekasoftware.com](http://www.heurekasoftware.com)*

**Company Description**

In 2014, Heureka was born from the increasing necessity to gain control of and insight into critical, unstructured data that poses risk or is needed for litigation, and to improve the economics of a resource-intensive process to identify, remediate and manage that data.

81% of the cost and resource of eDiscovery is collection and review and until now, data over-collection has been the norm, contributing to an inefficient EDRM model with poor economics. Heureka reduces the time and cost of discovery while increasing data relevancy and mitigating PII.

Unstructured data represents as much as 80% of all data, is growing exponentially, and is driving costs higher for data privacy risk mitigation and data management. Unstructured data is the home to PII (Personally Identifiable Information), inviting cyber threats, legislative pressure and punitive consequences. And it’s imperative to know where sensitive data resides in light of these complex and pressing circumstances.

Heureka's Management team is comprised of industry veterans with background in cyber security, eDiscovery, digital forensics, litigation management and enterprise software.

**Vendor Offerings**

Heureka’s platform enables data insight, management and classification, and eliminates data ‘over-collection’ and ROT (Redundant, Obsolete and Trivial data). Expenditures are reduced by 30% or more by eliminating manual processes and reducing time to results from months to days – for eDiscovery, Compliance (GRC), Data Privacy/Governance and Intruder Detection.

Heureka’s platform is comprised of an endpoint appliance, Command Console (Cloud or on-prem), and Advanced Classification & Tagging engine. The platform provides real-time access to unstructured data on network file shares, servers, VM's, laptops and desktops from a single interface - Linux, macOS and Windows.

Heureka’s Intelligent Collection features iterative searching, risk identification and analysis before collection. Data is analysed at the point of creation, enabling true early data assessment and the surgical targeting and collecting of relevant documents. Non-responsive data is minimized, contributing to improved eDiscovery economics.

**Risk and Compliance**

Heureka’s daily indexing and categorization engine helps locate and tag risky information such as national identification numbers, bank routing, credit card data, or any GDPR-specific terms. Heureka helps quantify risk and increase business resiliency by finding and eliminating data with no business, legal, or regulatory value (ROT). Reports allow data audits and data content verification. File actions include collection, quarantine or delete to enforce policy or regulatory rules across the enterprise.

**Company Description**

Hillogic specialises in eDiscovery tools and web applications. They develop software solutions, integrate software technologies and take advantage of the latest developments and trends in web technology. The team has deep knowledge of legal and financial services, specializing in eDiscovery technologies, CRM systems and financial software solutions.

At Hillogic, we’re dedicated to evolving your business through innovation. We strive to improve our client’s business process with creative solutions and efficient technologies.

**Vendor Offerings**

**Relativity Applications**

We have developed a number of Relativity applications and utilities for Relativity and RelativityOne to assist in making the review workflow more efficient.

**HyperlinQ** - Automated hyperlinking tool for Relativity, designed to automatically hyperlink documents referred to in pleadings, witness statements, chronologies and trial bundles. The app will identify document ID’s in the source Word document by recognising document numbering patterns. Documents will either be directly linked to Relativity or be downloaded as an offline copy.

**GENIE** – An advanced import/export tool for Relativity which can automate additional pre and post steps. Saved templated ensure consistency.

**PDF Agent** – A Relativity agent which can automatically convert native documents to PDF on the fly (or in bulk) and swap out the native with the PDF so the PDF is treated as the native.

**Project Management Software**

**ProjectNav** – Cloud based collaborative project and task management tool is designed to manage all aspects of eDiscovery projects, allowing firms and LSP’s to stay in control of everything that is going on even during those busy periods. With an intuitive user interface, tasks can be set up and assigned to the team in minutes using built-in templates which are designed to enforce consistency. Communication, time recording, and billing stats can all be recorded within the system. Dashboard reports showing the productivity of the team as well as financial information provides a real time overview of capacity and allows for resourcing decisions to be made quickly and easily.

**Custom Development**

We love to automate processes and integrate different technologies for seamless workflows. Working with customers technology stack we can integrate key software into more efficient solutions through customisation.
Web and cloud solutions
Our expert team design and build websites and web applications which integrate into other existing technologies. Our web services also include SEO to optimise online presence with social media and search engine marketing.
8.1.49 IBM United Kingdom Limited

Amir Jaibaji (Program Director, Offering Management)
ajaibaji@us.ibm.com | +512.417.7654
IBM South Bank, 76 - 78 Upper Ground, South Bank, London SE1 9PZ
www.ibm.com

Company Description
IBM is a global technology and innovation company headquartered in Armonk, NY. It is the largest technology and consulting employer in the world, with more than 400,000 employees serving clients in 170 countries, with around 20,000 of these in the UK, bringing innovative solutions to a diverse client base to help solve some of their toughest business challenges.

IBM offers a wide range of technology and consulting services; a broad portfolio of middleware for collaboration, predictive analytics, software development and systems management and the world's most advanced servers and supercomputers. In addition to being the world's largest IT and consulting services company, IBM is a global business and technology leader, innovating in research and development to shape the future of society at large. IBM's prized research, development and technical talent around the world partner with governments, corporations, thinkers and doers on ground breaking real world problems to help make the world work better and build a smarter planet.

In the era of big data, sifting through massive amounts of information to uncover what is important to a litigation matter is not only time consuming, but it increases cost and risk. eDiscovery solutions from IBM streamline the eDiscovery process for legal stakeholders and aligns them with IT, providing faster insight into data and ensuring only the right information is collected. IBM believes that eDiscovery starts with a solid information governance foundation, saving you time and money and reducing risk in the long run.

Vendor Offerings

IBM StoredIQ for Legal

StoredIQ for Legal enables legal teams to gain visibility and control over their eDiscovery/eDisclosure process reducing manual steps and handoffs resulting in reduced errors, time and cost. By providing a precise, swift, thorough and highly scalable solution for legal hold management, data identification and collection it helps them deliver a reliable, repeatable and defensible process for improved, timely and cost-effective legal outcomes.

IBM and the IBM logo are trademarks of International Business Machines Corp., registered in many jurisdictions worldwide.

**Company Description**

At iCONECT we build advanced legal review software that helps law firms, corporations and government agencies address complex review projects more cost effectively. It's as simple as that. In fact, we've been creating powerful software for over two decades – truly innovative tools that empower people and organizations to optimize workflows and manage big data in the cloud or on-premise worldwide.

Our new iCONECT v10 platform continues to blaze the trail for next generation thinking. In a world where many e-disclosure applications create more confusion than clarity, our iCONECT v10 platform establishes a paradigm for intuitive software that blends powerful functionality with easy to use features. It is designed to support how people actually think and interact with technology versus how engineers think they should.

Genuine innovation doesn’t stop at products, it runs through our company culture with everything we do including exemplary customer service and strategic programs engineered to help our clients and partners excel in multiple roles, industries and markets worldwide.

iCONECT services law firms, government, corporate legal departments and legal service providers (LSP) located in the UK, United States and Canada.

**Vendor Offerings**

iCONECT v10 uses our new innovative features such as Oversight; quickly identifies mis-classified documents, CAL; Continuous Active Learning platform that quickly identify and focus on documents that really matter and COVER; a module that gives you identification, report and redaction/blackout of PII, PHI, sensitive data or keywords to comply with CCPA and GDPR standards.
### 8.1.51 Iconic Translation Machines

Stephen Davis, Sales Director  
+44 (0) 7957 804 594  
stephen@iconictranslation.com

Capital Office Kemp House 152-160 City Road,  
London EC1V 2NX  
http://iconictranslation.com

#### Company Description

Iconic Translation Machines (Iconic) is a language technology software company. We have clients across a range of industries served from our London and Dublin offices. Founded in 2012 we have assembled a world-class team that is taking more than a decade's worth of leading research and development into Machine Translation and language technology and bringing it to our partners in an easy to use, secure and cost-effective manner.

We partner with the world’s largest enterprises, law firms, and government organisations, helping them to adopt bespoke, secure Neural Machine Translation solutions to deliver and consume multilingual content for their business.

Iconic’s e-discovery solution, using proprietary Neural Machine Translation (NMT) software, can help e-discovery providers, law firms, and corporate legal departments to translate large quantities of foreign language ESI, quickly, securely, and effectively.

Iconic’s translation solutions for e-discovery have been seamlessly integrated and leveraged extensively in the legal industry. All services are hosted in top-tier cloud computing facilities, ensuring maximum information security. The translation service is accessible through Iconic’s secure online translation portal, on-premise server solutions, or third-party application connectors such as Relativity.

Iconic has pioneered automated translation solutions tailored to cross border legal cases. Our e-discovery solutions are secure and robust, providing faster, more effective streamlined review of foreign language information.

#### Vendor Offerings

Iconic’s e-discovery translation software allows you to translate vast amounts of foreign language ESI quickly, securely, and effectively, without having to move files in and out of your review platform. We empower you to search for and find the most relevant documents in your multilingual content, in your language.

With proven technical excellence in the development and deployment of legal translation software solutions, Iconic’s proprietary software enables better quality end-to-end legal translation solutions that can be further adapted to your legal case by our in-house expert team of technologists using proprietary language tools.

#### Capabilities

- **Proprietary technology:** Innovative, state-of-the-art, proprietary architecture based on neural networks and artificial intelligence means more effective translations for review, reducing the risk of missing critical information.
- **Compatibility:** Iconic Relativity App is fully compatible with Relativity and RelativityOne, the cloud version of the e-discovery platform.
- **Broad language coverage**: Machine translation in more than 50 languages and 2,000 language combinations means the vast majority of cases are covered.

- **Automatic language identification**: Automatically detect the languages of your data set so you can focus on the review at hand - in your language.

- **Native file translation**: Native file formats including Microsoft Office (Word, Excel, PowerPoint), emails, PDFs, and text.

- **Translation customization**: Further adapt translations to your legal case, content, or industry with custom enhancements - including terminology and glossaries - for even more accurate translations.

- **Robust, scalable**: Translate large volumes of documents in a fraction of the time.

- **Secure, confidential**: Our private cloud solutions are secured using certified SSL technology, and our on-premise solutions ensure your data never leaves your network, preventing information leaks.

- **Data protection**: Our servers are located in multiple jurisdictions, meaning you can control where your data resides depending on the requirements of your clients.

</table>

**Company Description**

Founded in 2010 i-Lit Paralegals Limited provides temporary document review staff to law firms and companies. Uniquely focussed on the document review industry i-Lit Paralegals provides staff throughout the UK and Europe to organisations who need to effectively and efficiently review large quantities of documents. We are "review platform agnostic" and can provide staff experienced in the sector of your review, in the software you are using and who speak the same languages as the document population.

Our minimum educational requirement is the successful completion of the LPC although we regularly supply teams of fully qualified staff. Our service is focussed on quality and is bespoke on every occasion and as such we are used to delivering the most demanding of client requirements.

We price on either an "hourly" pricing model, a "per document" pricing model which just covers review or a "per document" pricing model that covers project scoping, data processing and document review.

**Vendor Offerings**

- On Site Review
- Managed Review Services
- Review Management
- Technology Assisted Review

- Off Site Review
- Document Review
- Workflow Management

#### Company Description

Founded in 1992 Innovative Development has been providing eDiscovery services since 2007. Innovative Development’s team of eDiscovery specialists provides state-of-the-art support to help clients facing the challenges of collecting defensible electronic information. Our UK office provides support for our international clients in Europe and Africa. This includes the newest EU regulation, GDPR (General Data Protection Regulation) which seeks to create a harmonised data protection law framework across the EU giving citizens back the control of their personal data.

Innovative Development is enhancing its eDiscovery services to include advanced A/I concepts and machine learning. Working with advanced collection, processing and review tools (we are tool agnostic) to conceptualized data and create efficient eDiscovery business process which will accelerate the completion of all compliance and litigation tasks on time and within budget.

#### Vendor Offerings

Innovative Development focus is multi-national companies facing a myriad of compliance and legal responsibilities that vary globally by region and country. We are helping our clients face the daunting task of meeting these varied requirements by implementing enhanced data collection and processing techniques for all our clients to facilitate rapid and accurate production of ESI (electronically stored information) whether for litigation or compliance needs. This process includes identifying opportunities for clients to proactively create usable data repositories of company ESI or technology integrated business processes to meet regulatory requirements (like GDPR) to mitigate potential compliance failures. We can bring best of breed tools or work with client’s existing tool portfolio to create the robust eDiscovery business processes to ensure complete, accurate and timely production of required data.

<td></td>
</tr>
<tr>
<td><a href="http://www.Insurgo.co.uk">www.Insurgo.co.uk</a></td>
<td></td>
</tr>
</tbody>
</table>

**Company Description:**

The tape media experts, Insurgo have a heritage of over 55 years providing tape media and data services.

The recent purchase of the assets of eMag Solutions UK, along with the transfer of the key service delivery personnel makes Insurgo unique as a wholly UK owned provider of sophisticated tape discovery solutions.

Underpinning all services is a thorough knowledge of tape, its structure, manufacture and operation. Insurgo sits alongside major manufacturers of tape and tape equipment on the LTO Consortium giving it access to the very highest level of technical information, crucial when resolving issues and developing new services. Insurgo is also a member of the Tape Storage Council. Adding to this to the deep understanding of corporate information storage methods and backup systems of the eMag Solutions team sets Insurgo apart as tape and tape-based data service providers.

To support eDiscovery and regulatory investigations, Insurgo have the ability to access data, email, voice and Instant Messaging from any tape type or format used in the corporate storage arena.

Operating from a secure centre in the UK and also on-site anywhere in the world, Insurgo is able to provide full support for any tape created using any backup format, processing all email and document types as well as voice recordings and IM systems contained on those tapes.

**Vendor Offerings**

Insurgo is a specialist tape and data services provider with unrivalled experience in the handling and restoration of back-up tape and the information stored upon it. Operating from secure premises (ISO 27001, ISO9001, ISO14001, ISO45001, ISO22301 certified).

Insurgo can catalogue, index and restore data from any tape type, created using any backup software. Voice tapes are also fully supported with indexing, selection and review of calls from a range of logger systems.

Using automation and with a stock of hundreds of drives of all types Insurgo is able to process more tapes, of more types and formats more quickly, securely and effectively than any other provider.

Utilising DART – a purpose designed specialist tape restoration software - the original backup software and a range of specialist utilities, eMag ensures a level of accuracy of result that is not possible using alternative, single appliance type, solutions. With full email, voice and document processing capabilities – covering all systems – Insurgo can process data to the point of upload to your choice of review system.
8.1.55 Integreon

Jeff Davis
jeff.davis@integreon.com | +44 (0) 20 7855 6020

City Place House, 9th Floor, 55 Bassinghall Street, London EC2V 5DU
www.integreon.com

Company Description
Integreon is a trusted, global provider of award-winning legal, business and research solutions for leading law firms, corporations, financial institutions and professional services firms. Integreon applies a highly trained, experienced staff of 3,000 employees globally to a wide range of needs that require scale and expertise, enabling clients to become more operationally efficient by streamlining operations, maximising investment and improving the overall quality of their work. With impressive scalability and ISO security certified delivery centres on three continents, Integreon offers multi-lingual, around-the-clock support, as well as onshore, offshore and onsite delivery of services.

For our UK, US and global document review clients, Integreon's ability to offer highly competitive commercial models without forgoing quality is based on 20-years refining and delivering process efficiencies for managed review and supervised review regardless of the delivery centre. Integreon also offers multi-lingual document reviews in more than 50 languages. Integreon is platform agnostic and can readily work with any eDisclosure hosting provider or can recommend a best-fit preferred partner. Either way, clients experience seamless project management and integration of technology and resources.

Vendor Offerings

Document Review

Managed Review: Globally managed review processes utilising industry-standard best practices, documented defensible processes and in-depth performance metrics to offer increased client visibility into project status, costing and results. Integreon prides itself on its bespoke, enhanced quality control processes. Managed review is available onshore, offshore, on-site and via blended service delivery and innovative pricing models. Integreon has experience with first or subsequent stage reviews, redactions, objective or subjective coding in the context of litigation, investigations (regulatory and internal), arbitrations, and Data Subject Access Requests.

Dedicated Review Teams: Dedicated teams deliver high-value services with a greater level of consistency based on their subject matter expertise and familiarity with specific client preferences.

On-Site Reviewers: Associates placed on-site at law firms to provide the advantage of contract reviewers that can be directly managed under the firm’s own review processes.

Technology Consulting and Service: Utilising technology-assisted review, Integreon has the expertise, resources and key partnerships needed to manage your legal and compliance review requirements. Clients can choose document review by itself or combine the service with one of the leading review platforms for an integrated approach.

Data Reduction and ECA

In conjunction with its partners, Integreon’s process integrates early case assessment (ECA) with data processing to help clients reduce data volumes and make informed decisions about whether to settle a case or proceed with litigation. Customizable reports help clients consider the risk, cost, and time required for a full discovery process.
Cyber Incident Response (CIR)

When a data breach occurs, clients need to respond quickly and with complete accuracy to ensure risk is mitigated and all obligations are met. Working independently or in conjunction with a cyber-security practice in a consulting or law firm, Integreon can quickly mobilise to conduct the necessary review and extraction of sensitive information to produce a clean Consolidated Entity List to ensure those impacted can confidently comply with all notification regulations.
8.1.56 Intelligent Voice

Nigel Cannings
nigel.cannings@intelligentvoice.com | + 44 (0) 20 3627 2670

St Clare House, 30-33 Minories, London EC3N 1BP
www.intelligentvoice.com

Company Description
Intelligent Voice Limited is a global leader in the development of proactive compliance and eDiscovery technology solutions for voice, video and other media. Intelligent Voice® turns audio, video, email and IM into smart data, using a powerful Machine Learning Engine, combined with the fastest commercially available Speech to Text processing. Featuring biometric speaker identification, custom language and acoustic modelling and both on premise and in-cloud integration, to provide you with the best processing and analytics tool available on the market.

Intelligent Voice enable government agencies, banks, insurers, litigation support providers, and international consultancy and advisory businesses to manage risks and meet regulatory requirements. The company is headquartered in the United Kingdom and has been providing market leading solutions across structured and unstructured data since the infancy of Optical Character Recognition in the early 1990s.

Fundamental to the success of the company, the patent-pending technologies Intelligent Voice® and SmartTransript™ are developed by a team of dedicated researchers and system engineers based in the UK. Ownership of the core technology resides with Intelligent Voice. Intelligent Voice continues to lead the market and will maintain their strengths in the areas of thought leadership, innovation, R&D and providing solutions to their clients.

Key to the Intelligent Voice ethos is Privacy, Performance and Price. Intelligent Voice presents itself as a “cloudy” solution, but it can be deployed on-premise or in a private cloud. Intelligent Voice does not use public cloud services for its speech to text

Vendor Offerings
High speed audio and video analysis and review underpinned by:

- Ultra-fast speech to text processing using NVIDIA® GPU cards, whether server or cloud based
- Topics of interest automatically surfaced via a proprietary approach
- Lattice based searching – combining the best of transcribed text and a word probability lattice to offer the widest possible range of searches across a dataset, without the over-retrieval of phonetic search
- Biometric voiceprint searching – independent of any metadata or transcribed text.

Results from telephone calls or audio or video files that can be ingested into any eDiscovery system as:

- Speaker-separated US federal court format transcript text file
• IV Note; an automatically generated email containing the speaker separated transcript text within the body of the email and/or the original audio or video file as an attachment
• Data load file (.DAT)
• Standalone JumpTo™ Review Player html file containing navigable transcript text and key topics combined with a player for the embedded audio / video file.

Audio historically sat in its own isolated silo, with phonetic search – searching on the sounds that make up the words rather than the words themselves – the only available tool. However Phonetic Search (sometimes referred to as Audio Search) in isolation has significant drawbacks:

• Phonetic / Audio Search does not give you “unknown unknowns” – you need to know what you need to know before you can find it.
• Phonetic / Audio Search does not produce text. The workflow for any matter involving more than just audio – emails, IMs, scanned documents, etc – relies on text-based review, as do analytics tools such as Relativity and Brainspace.

Intelligent Voice® for eDiscovery have been designed by a team that have undertaken audio review themselves, and as such the toolset is intuitive and easy to use. The unique, pat pending JumpTo™ Review Player cuts down review times significantly. Intelligent Voice® gives great power out of the box, enabling thousands of hours of audio to be processed each day. Intelligent Voice® only exposes what is relevant to an individual user or organisation.

One user said that it cuts down review time based on other tools they had used by 70%.

Intelligent Voice has Native Relativity plugins for both on-prem and Relativity One enabling you to ingest, search and redact Audio natively within Relativity and RelativityOne.

All of IV’s functionalities are available natively in both the Relativity and RelativityOne platforms:

- Security. IV lets you choose on-prem, private cloud, partner hosted and now IV’s secure SaaS processing, using high-speed GPU powered speech algorithms.
- IV works in more than 20 languages and dialects as well as providing an alternative word (“lattice”) search to enable you to find likely words and phrases without the over-retrieval of phonetic search.
- User-driven model building put the power to get greater accuracy in your hands without the need for expensive and time-consuming professional services. Just add text or run a saved search against documents already in your workspace.
- Search and analyse audio files without leaving the platform. Search for key terms in a specific file or across your entire archive of audio data.
- Redact text and audio direct from your interface using simple word highlighting.

NEW: Intelligent Voice worked with Relativity to develop their developer trial program and will be the first Partner to offer it. Available to new and current RelativityOne customers, the new trial program allows users to deploy and use select RelativityOne-integrated apps in a free-trial format.
NEW: Intelligent Voice have partnered with Zylab to integrate speech review into Zylab’s eDiscovery platform.

See the Intelligent Voice entry in the Software Section for more details.
### 8.1.57 Inventus

<table>
<thead>
<tr>
<th>Adrian White,</th>
<th><a href="mailto:awhite@uk.inventus.com">awhite@uk.inventus.com</a></th>
<th>+44 (0) 20 3727 7129</th>
</tr>
</thead>
</table>

#### Company Description

**Inventus**, a Legility company, is a global eDiscovery management practice focused on reducing the costs and risks associated with the discovery process through the effective use of leading technology. For more than 25 years, Inventus has been at the forefront of discovery services and has worked with corporations, law firms and government agencies to develop a deep understanding of their needs. A truly global organisation, Inventus has offices throughout Europe, North America, and Asia where they have supported review in more than 35 languages. Please contact Inventus at info@inventus.com or visit www.inventus.com for more information.

#### Vendor Offerings

- **Discovery Management**: Inventus’ technology and legal project management expertise provide clients with a cost-effective and defensible disclosure process. Our proprietary workflows and solutions, coupled with our unparalleled expertise and consultative approach, allow corporations, law firms and government agencies to recognize extensive disclosure-related efficiencies and, in turn, substantially mitigate their cost and risk throughout the process. Inventus’ proprietary discovery management platform is fully enabled within Relativity.

- **Document Review**: Inventus provides customers with comprehensive review services, leveraging leading technology, Technology Assisted Review (TAR), Early Case Assessment (ECA) and a team of legal review experts, to save clients time and money. Our team has managed thousands of document reviews for Fortune 500 companies in a variety of sectors. As a global company, we also provide services wherever you need us and in over 36 languages.

- **Dashboard Analytics**: Spotlight is a business data analytics dashboard that provides full visibility into all of your key metrics including data spend, ROI and reviewer statistics. Users have immediate access to any structured data set, such as e-billing, data volume or matter detail. Spotlight provides you with fully customizable and intuitive dashboards to assist in managing department functions, giving you valuable information to improve the decision making process.

  **Key Features:**
  - Instantly see key metrics, volumes and benchmarks on your own data in real-time. In addition to your own data, you now have the ability to measure and quantify outside counsel efficiency.
  - Live access to all the key metrics in a document review gives Spotlight users the ability to take control over the costly review process.
process. In addition, by mapping data visually, Spotlight can also help identify gaps in data sets based on chronology or help spot missing custodian data.

- Data is presented in fully customizable charts and graphs, preparation of budgets, benchmarks and executive level presentations now takes only minutes.

- **Digital Forensics:** The Inventus Digital Forensics practice consults on findings that come from reactive litigation and investigation cases to help close gaps in ethics and compliance programs, internal controls, and audit procedures so that your legal organization can become more preventative in its purpose. Inventus also provides evidence collection and forensic analysis services which include reports on:
  - Internet Browsing and Search History
  - External USB Device History
  - Cloud Storage Activity
  - Webmail Analysis
  - Recycle Bin and Deleted Items Analysis
  - FTP Log In Analysis
  - Jump List, Shell Bag, LNK File and MRU File Analysis
  - Chat Log Analysis
  - Media Analysis
  - Anti-Forensics Analysis

<table>
<thead>
<tr>
<th>Company Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>IT Group was founded in 2004, focusing on three complementary core services; eDiscovery, IT and technology expert witness services and digital forensics.</strong></td>
</tr>
</tbody>
</table>

**Expert witness and advisory**

Our specialists provide technical and forensic expertise in a global market, covering all aspects of IT and technology outsourcing projects, corporate investigations and data security. We also have expertise in electronics and electrical and mechanical engineering which has been critical to complex investigations in the automotive industry, technology patents as well as the technical analysis required for large construction disputes.

Our evidence is used in matters relating to delay, overspend, best practice and fitness for purpose of technology-based business transformations and implementations, and our clients range in size from individuals through to government agencies, blue-chip multinationals, law firms and insurers.

**eDiscovery and digital forensics**

Our eDiscovery specialists support some of the highest profile litigations in the world. We use cutting edge technologies that incorporate AI, machine learning and other forms of advanced data analysis which are significantly more effective than human reviewers when it comes to culling irrelevant documents and identifying those which are most relevant.

Our experts analyse electronic data sets for investigations and provide litigation support and document review services for parties throughout the eDiscovery lifecycle.

**How we work**

IT Group’s experts have been instructed in ground-breaking trials and some of the world’s largest IT and technology disputes, working for clients throughout Europe, Africa, the Middle East and Asia. Our partners are acknowledged by Who’s Who Legal as leading expert witnesses in data and investigations and regularly contribute to legal publications and events.

Our experts combine deep technical knowledge, acquired through years of experience delivering projects and designing systems, with a thorough understanding of the litigation process. We have been involved at every stage of numerous disputes, from the initial identification of technical issues and the writing of expert witness reports to the provision of oral testimony in litigation, arbitration and adjudication.

We operate to two major ISO standards and we are externally audited on an annual basis to ensure that our data retention and quality policies are always maintained at the highest standard. In addition, we hold a Cyber Essentials certification and our systems and networks are protected by Darktrace, a world leading threat detection technology that utilises artificial intelligence to monitor our network and any potential security threats.
## Vendor Offerings

IT Group provides clients with a dual eDiscovery platform offering; RelativityOne and Intella Connect.

### RelativityOne

Partnering with Relativity to offer their flagship SaaS Cloud based eDiscovery platform, RelativityOne allows our clients to transition into the cloud which can benefit teams involved in multinational litigation, investigations and various other engagements.

Offering lightning fast processing, proprietary workflows and unrivalled AI and analytics, our RelativityOne platform is a best in class service for eDiscovery processes whilst helping clients gain in-depth knowledge of data sets faster and providing more effective results driven by powerful analytics and visualisations.

### Intella Connect

IT Group’s alternative eDiscovery and digital investigation solution, Intella Connect, is a powerful web-based platform that enables legal and regulatory professionals to perform intelligent searches and to filter and review large volumes of electronic data from a variety of sources.

Whether you require court-ordered formal eDiscovery or assistance with intelligence gathering for litigation purposes, the Intella Connect search and review suite provides a fast, easy to learn, flexible solution for the investigation of electronic data. Built-in visual analytics help establish relationships between search results and documents, enabling users to track evidence across different file types and quickly and accurately identify key data.

The wholly web-based platform allows multiple reviewers to work on the same case simultaneously and can be accessed securely from any device with an internet connection. Whether you require one reviewer or multiple teams across different global office locations, Intella Connect is scalable and flexible to meet your requirements.

### Forensic data collection & preservation

Drawing on expert witness experience in digital forensics and cyber security, our collections team work quickly to help identify and retrieve critical data. Our forensic tools extract live and deleted data from sources such as email accounts, databases and cloud storage that can be housed anywhere from servers and workstations to mobile devices. As we also can collect data remotely, we are able to avoid the disruption of physically removing hardware and systems from client premises.

### Data processing & hosting

The processing power of our UK-based data centre gives more control over digitally-stored information to create data sets that are fully primed and optimised for review. Capable of processing over one million files per hour, we apply intelligent file indexing and extract relevant assets in a way that preserves the original data while giving fast, easy access to information. Throughout the processing stage, we apply deNISTing and deduplication to the data which further culls the files by excluding irrelevant files, eliminating unnecessary hosting costs and helping you get to the heart of what’s important quickly.

### Document review platforms

With two leading edge platforms to choose from, IT Group will propose the best solution for your matter. Whether the requirement is for high end analytics, email threading, conceptual searching, foreign language identification, technology
assisted review or simple ease of use, IT Group can understand and meet those requirements with the right platform.

**Project management**

With backgrounds in the legal, consulting, corporate and security worlds, our eDiscovery professionals and experts can provide everything from tailored ad hoc advice to project management support. We can interface directly with legal advisors, clients or technical teams as required to ensure that everything is as efficient and convenient as possible.

JND eDiscovery
431 1st Avenue North Suite 410
Minneapolis, MN 55401
http://www.jndla.com/ediscovery

**Company Description**

JND eDiscovery is an innovative legal services firm serving public and private sector clients in the areas of Data Collection, Processing, Review Hosting, Analytics, Managed Review and Production. Understanding that each case is unique, JND’s industry experts work closely with clients to design custom workflows, tailored dashboards and real-time reporting techniques, enabling case teams to work smarter and faster at a fraction of the cost.

JND eDiscovery is a Minneapolis-based subsidiary of JND Legal Administration, a legal management and administration company led by a team of industry veterans who are passionate about providing superior service to clients. Armed with decades of expertise and a powerful set of tools, JND has deep experience expertly navigating the intricacies of multiple intersecting service lines including eDiscovery, legal notice programs, class action settlements, mass tort claims, healthcare solutions and government services. Backed by Stone Point Capital and headquartered in Seattle, Washington, JND Legal Administration is trusted by law firms, government agencies and Fortune 500 companies across the globe.

**Vendor Offerings**

Investing in an array of COTS software and managing one of the largest cloud production environments of RelativityOne on the market, JND offers its clients access to leading-edge technology, managed services, proven workflows and best-in-class litigation support. Our premier RelativityOne environment includes exclusive access to JND’s custom developed, Relativity-integrated software applications, LayerCake™ and MachOne™.

By moving to the cloud as a Certified RelativityOne Partner, JND provides infinite scalability, compliance with the industry’s most stringent security protocols and early access to the software’s most cutting-edge features. JND’s secure RelativityOne environment supports data transfer speeds 10x faster than non-cloud based software solutions. With unprecedented search speeds of <1 second per 1 million documents, JND is geared to support the largest and most challenging matters with ease.

**JND eDiscovery’s Service Offering Includes:**

**LITIGATION READINESS**

JND’s experts consult with clients to establish defensible and efficient protocols prior to litigation, ensuring that they are prepared to meet their varying discovery goals and obligations within budget and without surprises. We collaborate with HR and IT teams to map network locations and job roles within the client’s organization.

**COLLECTION**

JND has a proven track record collecting from a wide range of data sources, including email, cloud data, network shares, hard drives and structured databases. Our team of certified experts leverage a continually growing array of best-in-breed collection and imaging tools to defensibly meet the varying needs of each collection. We offer both onsite and remote collection capabilities, and will consult with your team to determine the best technology to leverage on a per-collection basis.
ESI PROCESSING

JND delivers high-speed, predictable processing results through Relativity. We’ve combined best-in-breed technology with industry experts to develop a defensible, streamlined approach that delivers accurate results the first time. Key processing highlights include:

- Up to 2TB/day Throughput
- Keyword or Analytics-Based Culling
- Email Threading
- Near and Exact De-Duplication
- Hidden Data Detection
- Interactive Reporting
- NIST Filtration
- Automatic OCR of Images

JND’s processing environment is capable of handling single processing sets up to 5TB without decreasing system performance. Because we use Relativity Processing, documents are instantly reviewable when processing completes, eliminating the cost and time incurred by exporting and loading between platforms.

REVIEW HOSTING

JND delivers an industry-leading review platform, RelativityOne, providing a feature-rich backbone to organize, track and quality control your review. With an array of dedicated high-speed servers, JND’s Relativity environment was designed to outperform competition in system uptime and speed for cases small and large. The environment features:

- Able to Support 100+ Million Document Workspaces
- Military-Grade Encryption and Security
- Elastic Cloud Infrastructure
- Custom Reporting
- Proprietary Analytics

ANALYTICS

JND seamlessly integrates cutting-edge analytics capabilities into its processing and review workflow, allowing clients to defensibly leverage the benefits of analytics without requiring deep expertise into the "black box." JND offers a variety of analytic solutions proven to remove non-responsive data from the review set, promote responsive data, and generally expedite linear review. Such technologies include predictive coding, concept searching, clustering, assisted keyword generation, email threading and near de-duplication. Our analytics experts apply each of these technologies with a focus on defensibility and transparency.

PRODUCTION

JND offers a comprehensive suite of production capabilities to easily facilitate the creation, tracking, reporting and delivery of document productions in a variety of formats. All documents that have been produced are stored alongside their source record and can be referred to with a single click in the document viewer. For the life of the case, each production set will be available for export or future reference.

Military Grade Security

- FEDRAMP/FISMA Compliance
- ISO 27001
- SSAE 16
➢ SOC I, II and III
➢ AES 256-bit encryption for data both in transit and at rest

**PROPRIETARY SOFTWARE (LayerCake and MachOne™)**

Beyond our commercial-of-the-shelf software offering, JND’s clients have access to JND’s proprietary analytics software, LayerCake. LayerCake unlocks Relativity’s full potential to mine your data using Analytics. By synchronizing results across TAR, clustering concept searching and other queries, LayerCake is able to calculate a single priority ranking for each document according to many criteria as opposed to just one. LayerCake’s priority ranking can then be used to identify hidden pockets of data, promote key documents for urgent review and suppress junk from the document set.

A 2019 Relativity Innovation Awards finalist, MachOne is an alternative coding interface developed by JND that is optimized for ultra-fast, low-latency document review. The application effectively reduces time between documents and gives users access to a fully editable ‘grid view’ document list with built-in field verification for automated quality control.

**SOFTWARE**

JND offers clients access to the following COTS and proprietary software:

- **Collection**
  - FTK
  - EnCase
  - Cellebrite
  - Logicube
  - F-Response
  - Stealth Forensic

- **Processing and Early Case / Data Assessment**
  - RelativityOne

- **Review and Analytics Tools**
  - RelativityOne
  - JND LayerCake™ (patent-pending)
  - JND MachOne™ (patent-pending)

- **“All in One Products” (Both ECA and Review)**
  - RelativityOne

#### Company Information

Founded in 2002, with headquarters in the Washington, DC, metropolitan area, Knovos is a leading solution innovator developing technologies to solve today's legal information management challenges. Knovos has a successful track record of delivering robust, secure, and cost-effective solutions to law firms, corporations, government agencies, and partners around the world — helping organizations manage data, collaborate securely, optimize workflows, and make more informed decisions.

Knovos has more than 1,800 enterprise-level clients and 12,000 active users of its products, which cover end-to-end eDiscovery, information governance, legal project management, collaboration, arbitration, and performance management. Backed by unparalleled engineering and domain expertise, each product is highly secure, fast, flexible, and reliable. Knovos' international customer base includes Am Law 100 law firms and Fortune 100 corporations, as well as leading advisories and service providers.

In 2019, Knovos' technological innovation helped U.K.-based international law firm Hogan Lovells save approximately $400,000 and 8,300 hours of review time in a case involving more than 10 million Korean-language documents. Knovos was also named in Gartner's 2019 Market Guide for E-Discovery Solutions.

With more than 300 employees across its offices throughout the U.S., EU, and Asia, Knovos is equally committed to the quality of its products and the quality of its support. Knovos’ partnership program welcomes technology partners, consulting/advisory partners, and service partners/resellers. Companies of all sizes can benefit from Knovos’ flexible pricing model and 360-degree solutions to help gain power over data.

#### Vendor Offerings

- **eZReview**: End-to-end eDiscovery (early case assessment + data processing and production + document review and analysis)
- **eZManage**: Legal project management solution for law firms and corporate legal departments
- **nayaEdge**: Information governance solution for regulatory compliance, litigation readiness, and GDPR response
- **Cryptacomm**: Document collaboration platform for secure file sharing, helping organizations enhance efficiency and productivity
- **Arbicomm**: Arbitration management solution enabling central, secure collaboration, with powerful features like auto-indexing and trial bundle preparation

Company Description

KPMG help corporate and financial clients, and their in-house and external legal counsel to rapidly respond to data needs in disputes, investigations, and regulatory and internal reviews.

We have a highly-experienced team which includes a range of specialists, industry sector experts with in-depth knowledge of e-disclosure, incident response, investigations, regulatory inquiries and data enhancement and remediation. We have over 500 forensic technology specialists globally and have been offering leading forensic services for many years.

We use industry leading technology, supplemented with our in-house customised solutions, to address your specific needs. Our flexible charging options mean we can help clients control costs at every stage of the process.

Vendor Offerings

**Forensic Investigation and Expert Witness Services**

- We bring together data collection, evidence handling, processing, analysis, reporting and testimony to corporate, legal and government organisations. We can investigate breaches of information security policy, IT asset misuse or hacking activities and are experienced at capturing and analysing data from a wide range of electronic devices, media and sources including desktop and laptop computers, servers, backup tapes, mobile devices and telephony systems.

- The team attend court to provide testimony regularly in support of wider investigations including acting as Expert Witness. In addition to oral testimony we provide expert reports and witness statements for court in civil litigation and criminal matters.

**eDiscovery – Regulatory and Litigation Management**

The burden of regulation, litigation and investigations is huge and it shows no sign of getting any smaller, we can assist you by providing:

- A full end-to-end eDiscovery technology platform, including collection, processing and hosting of all data types, including email, edoc, chat, social media, audio, risk and trade data.

- Established eDiscovery workflows and optimised processes.

- Standardised and consistent dashboards and reporting, configured to suit the relevant stakeholders.

- Access to new technology and workflows (TAR, machine learning, Brainspace) through KPMG strategic relationships.
## Data Separation and Remediation

- The data remediation service enables companies to identify, map and remediate large volumes of key unstructured data (Email, Word, PDF etc.) and structured data (database driven applications such as SAP, Salesforce etc.) throughout their infrastructure.

- The service is deployed in an auditable and risk-adverse manner, whilst ensuring minimal impact on business activities.

- Remediation can take many forms depending on the companies’ requirements, including removal, transfer, duplication and / or forensic deletion of data.

- Demand stems from regulatory requirements, legal mandate, M&A / Divestment activity or fit for sale preparation.

**COMPANY DESCRIPTION**

KLDiscovery, formed from the merger of Kroll Ontrack Legal Technologies and LDiscovery, provides technology-enabled services and software to help law firms, corporations, government agencies and individuals solve data challenges of every size and complexity. We can help with everything from the investigation of a single device or mailbox to a multi-terabyte, multi-jurisdiction legal review involving hundreds of data custodians and utilising the latest in Artificial Intelligence technology. The company is a global leader in delivering best-in-class eDiscovery, information governance and data recovery solutions to support the litigation, regulatory compliance, internal investigation and data recovery and management needs of our clients. Serving clients for over 30 years, KLDiscovery offers data collection and forensic investigation, early case assessment, electronic discovery and data processing, application software and data hosting for web-based document reviews, and managed document review services.

Our history and experience as one of the very first companies involved in digital evidence and data recovery means that we understand better than anyone the challenges faced when managing electronic evidence. We attribute our success to our unique culture, our client-focused services, our expert consultant and technical teams, and our industry-leading document review platforms and infrastructure. This ensures that risk is minimised and we deliver a service that is second to none, whatever our client’s size or requirements. We are an Orange-level Relativity Best in Service Partner, a Relativity Premium Hosting Partner, and we maintain ISO/IEC 27001 certified data centres with state-of-the-art technology and security.

KLDiscovery operates in over 40 locations in 19 countries around the world and continues to expand rapidly. With more than 1,100 employees in multi-disciplinary teams dedicated to assisting clients, we can deploy consultants familiar with local laws, languages and cultural issues, offering a truly global service. We pride ourselves on being “around the globe and across the street”, ensuring that our worldwide technological expertise is tailored locally to clients whatever their size and requirement. Our European head office is located in London where we have over 100 staff and carry out in the region of 500 assignments per annum. We have dedicated data centres in the UK, Ireland, the US, Canada, Germany, France and Japan, providing the capability to operate in situations where there are legal difficulties with international data transfer. Our capabilities are enhanced by our mobile Remote Collection Manager® and NPC data collection and review solutions. These enable forensic collections, e-disclosure exercises and investigations to take place anywhere in the world irrespective of local infrastructure.
VENDOR OFFERINGS

Edisclosure: We offer Nebula™, a proprietary end-to-end cloud-optimised eDiscovery solution, as well as Relativity processing and review capabilities and our EDR review platform. All of our platforms include developments unique and proprietary to KLDiscovery such as our nearline hosting capabilities, and our industry-leading Predictive Coding and Automated Workflow technology. Nebula and Relativity also include additional enhancements such as A/V Suite, AutoRedaction and Native Excel Redaction. EDR includes visual communication analysis, phonetic audio searching and in-platform machine translation.

Managed Review Services: KLDiscovery’s Managed Review team has offered review services in the EMEA area since November 2014 (US services began in 2008). Our dedicated review centre in London holds seats for 100 reviewers, with an additional 45-seat document review centre in Böblingen, Germany, and a 100-seat review centre in Katowice, Poland offering responsive, multilingual review from qualified lawyers at exceptionally cost-effective rates. All of our document review centres are owned and managed by KLDiscovery, with review managers employed by KLDiscovery, ensuring that we have complete control of the staffing and security of the review process.

Our robust productivity reporting enables in-project efficiency and our Six Sigma-based quality control policies and procedures ensure a high level of review accuracy. We ensure that the highest calibre of review lawyers assist with your cases, working closely with you to deliver the precision in document categorisation that you would expect from lawyers at your own firm.

Strategic Consulting & Case Assessment: Members of our case management team have extensive experience in the edisclosure industry and we employ a team of consultants and client services professionals with extensive and diverse backgrounds in law, technology, project management, business and other areas. Our services range from case management tasks and assistance with preparing search term reports to full consulting services focused on search term development, iterative analysis, early case assessment and sampling to assist you in areas including the negotiation of terms, culling of irrelevant data and identification of relevant material or specific documents. Our consultants utilise their legal, technical and edisclosure backgrounds together with their depth of knowledge of review platform search tools and capabilities to provide exceptional support to clients in setting up document processing and review.

Computer Forensics: KLDiscovery is a leading computer forensics provider and offers expert analysis and triage of evidence held on all forms of electronic media. Our team includes EnCase, AccessData, X-Ways and Nuix-accredited practitioners with over 20 years’ experience in the field. We utilise all of the industry-standard forensic platforms as well as having the capability to produce bespoke forensic solutions. Both remote and global on-site assistance are possible depending on technical requirements. In particular we offer our proprietary Remote Collection Manager forensic tool which enables non-technical personnel to carry out secure, fully audited and defensible forensic collections via USB using a pre-configured external hard drive.

Our computer forensics team works closely with other areas of the business including our eDiscovery consultancy to offer the most efficient and cost-effective means of recovering and analysing digital evidence, following strict chain of custody and forensic protocols. Our investigators have appeared as expert witnesses on countless matters at courts and tribunals at every level of the justice system.

- Company owned ISO27001 Operations Center in India
- Proportionate and Predictable Costs
- Proficient at customized workflows and processes
- Experienced professionals with backgrounds in investigations, electronic discovery, data subject access request, due diligence, compliance, information governance, asset tracing and insolvency

#### Vendor Offerings
LDM Global’s expert legal and technology resources focus on consultancy for law firms and corporations and include:

**eDisclosure**
- Identification and Preservation of ESI
- Data Subject Access Request support
- Data Processing
- Data Analytics & Consulting
- Technology Assisted Review
- Hosted Document Review
• Managed Document Review
• Proactive Project Management
• Managed Services
• Production Services

Analytics
• Email Thread Analysis
• Near Duplicate Analysis
• Conceptual Searching and Clustering
• Relationship Analysis
  o Entity Extraction (AI identification)
  o Matter specific custom entity builds
• Custom prebuilt models
• Pattern Analysis
• Emotional and Behavioural Identification
• Fraud Indication
• Advanced Continuous Active Learning

Document Review
• ISO27001 Certified review suite
• A scalable and talented pool of experienced Document reviewers
• Review centre managed by a Director with over 26 years of industry experience

Digital Forensics
• Identification and Preservation of ESI
• Defensible Collections
• Data Scoping and Analysis
• Custodian Interviews
• Expert Testimony
• Strategy and Consulting

LDM Global offers full support on Relativity, a powerhouse tool offering advanced analytics, assisted review, hosted document review and production. In addition, another option that some clients find of great value is to have LDM Global host the Relativity software – saving on infrastructure costs -- while opening up permissions to allow the client to get more hands-on and do much of the eDisclosure work themselves. LDM Global leverages the RelativityOne environment, a cloud based solution which affords greater security of clients’ data, greater scalability and increased response times.

While being first to market in the U.K. with Relativity, we also offer Viewpoint, a technology platform providing an all-in-one-tool, giving our clients options for the tool that best fits their needs. Viewpoint includes processing, advanced analytics, assisted review, hosted document review and production all in one platform. In addition to creating efficiencies through keeping your data in one tool, Viewpoint also
allows for the flexibility to offer clients predictable and fixed fee pricing. This enables the use of large case technology to be deployed on small matters and is a cost benefit to clients.

Furthermore, LDM Global offer both Nuix for processing and Nuix Discover (formerly Ringtail) for Review. Nuix is a market-leading processing tool, equipped to handle any volume of data, structured or unstructured. The recent upgrades to Nuix Discover allow it to compete as a strong alternative to the aforementioned web-based review platforms.

Finally, the newest addition to our suite of technologies is NexLP, which we offer as a plugin to Relativity. LDM Global utilizes NexLP to interrogate data, prior to review. With our bespoke, customised entities; allowing us to train the system in order to identify highly relevant documents, human behaviour and emotion, data patterns; our customised workflows enable clients to prioritize data and expedite any subsequent review. LDM will consult with one of our prebuilt custom models or can create an innovate solution based on your specific case needs.

**Company Description**

LTI specialises at helping customers solve their data challenges. When data is needed to answer legal questions arising from regulatory investigations, disputes or other business challenges, LTI deploys the best experts and technology so that customers can make informed decisions.

In 2020, LTI's core team is located in the UK, France and Belgium. A network of independent Forensics, eDiscovery and technologists' experts throughout the rest of Europe and beyond, allows LTI scale and provide in-country counsel.

LTI experts have extensive knowledge in the Competition space, supporting companies who are faced with Merge or Cartels Investigations at both national and EU level. Nation/international. LTI provides proactive services around Incident Response and compliance monitoring.

**Vendor Offerings**

LTI provides customers with data forensic, eDiscovery, eSearch and data remediation experts and technology solutions.

Our tech solutions can be provided to customers onsite or from one of 17 data centres around the world. The following servers are on offer:

**Data Collections and Preservation**

When data and documents need to be obtained as evidence, LTI’s consultants have the skills needed to collect and preserve.

By questioning and interviewing, we set out to learn how and where documents are stored. Creating a clearly defined protocol provides our customers with an understanding of the processes.

LTI's Data Collection and Preservation services include collecting data from Laptops/Computers, Emails, Mobile Phones, Social Media, Servers and Websites.

**eDiscovery for Litigation or Investigations**

When faced with a legal dispute or regulatory investigation, a company will have to retrieve internal data/document sets, then analyse and provide the supporting electronic evidence.

LTI's eDiscovery consultants have been helping lawyers navigate litigations and investigations for over 20 years. Combing our consultancy with the latest cutting edge eDiscovery technology ensures that each phase of an eDiscovery exercise can be conducted with skill and precision.

Our eDiscovery technology solutions can be deployed from within your organisation or remotely from a number of secure data centres situated around the world.

Our services can be purchased monthly, project by project. However, customers looking for long terms’ solutions can benefit from annual packages.
Data Subject Access Request (DSAR)

Our DSAR offering provides customers with the technical capability to reduce the cost associated with handling DSAR’s.

Working with our customers, we create a DSAR Playbook, which details how to identify, review and produce responsive document sets.

Combining LTI’s consultancy and document review platforms, ensure that an efficient and auditable workflow can be designed.

Exit Lever Strategy

Employee Leaver/Exit Strategy is a preventive program created by LTI to ensure that your organisation can proactively handle potential risks, business and regulatory challenges even after key people leave.

Our consultants work with you to make sure that your company is best prepared to deal with critical situations and events where data and documents from current and former employees are needed.

Your company’s data is the lifeblood of your organisation. We help detect if people are leaking or taking data outside of your company.

#MeToo Incidence Response

#MeToo Incidence Response is a service offered by LTI to help companies collect qualitative and relevant data in relation to harassment incidents.

LTI has gained vast experience dealing with delicate corporate investigations, thus allowing us to offer our #MeToo Incidence Response service. Our service is empathic, discreet and impartial, which is needed when faced with employee document evidence-gathering exercises.

Proactive Compliance Monitoring Technology and Consulting

The proactive compliance monitoring is a service that allows a company to monitor for business risks in real-time.

LTI’s consultants work closely with our customers to analysis which systems are in use and implement the technology and workflows which are suited to the environment and needs. Our flexible approach allows companies to adjust the monitoring method on the fly.

Data Remediation

LTI’s data remediation service can be deployed to solve many data challenges. In essence, we work with our customers to identify data and document sets of interest, within an IT estate. Then take the necessary actions to isolate and remove the data and documents.

Typical situations we help clients with:

A customer is maybe interested in migrating to a new IT environment or want to remove/cull non-business data, conduct a Rot Analysis.

A regulatory may demand a business identity, present or/and remove data/documents a company controls/has in their possession.

Helping a company reply to GDPR request, identifying and destruction of data.
## Core Software Tools:

Data Collections/Acquisition and Forensic analysis software. Supporting the collection, preservation and analyse of source data/evidence:

- Forensics Explorer
- FTI
- Caine
- Deft
- Paladin
- Mobile Edit
- Magnet
- Google Vault
- Microsoft Compliance
- MetaSpike

### Data Processing and Document Review Software.

**Mindseye** is the software used to extract metadata, identify duplicates and make non-search files searchable. It is also used to prepare data for loading into the document review platform. This software is installed on all datacentres and can be deployed at a client's site/office.

**Reveal** is our hosted document review platform software. The document review platform allows for a single person or a team of people to search, review and classify documents in a collaborate fashion. Reveal is deployed in all datacentres and can also be installed at a client's site/office.

**Brainspace** is used for advanced data analytics, data insights and predictive coding/coding exercises. Brainspace is installed at a data centre level and integrates within the Reveal document review platform.

**NexLP** provides boosts AI and machine learning/natural language processing, which allows our customers to detect emotional and behavioural patterns. The learning/work product created on a project can be re-implemented on new mandates, thus allowing a company/lawyers to build power AI models. NexLP is installed at a data centre level and integrates within the Reveal document review platform.
8.1.66 Legastat

Paul Fox – Sales Director
paul.fox@legastat.co.uk | 07887 408521 | 020 7492 6510
57 Carey Street, London, WC2A 2JB
www.legastat.co.uk

Company Description
Established in 1953 Legastat have been providing litigation support services throughout the UK for over 65 years. Today, Legastat combines a range of traditional legal reprographics services such as printing, copying, scanning and document coding with innovative technologies for eDisclosure. Legastat’s mission has always been to provide an outstanding customer experience of the very highest quality.

Located in the heart of legal London Legastat are trusted to deliver an independent, professional and efficient service to top law firms, corporations, government agencies, small law firms and sole practitioners; all of whom rely on us to meet their litigation support and disclosure obligations on time, accurately and efficiently.

At Legastat we put our customers’ needs, quality and confidentiality at the heart of everything we do. This is demonstrated by our ISO 9001 accreditation for quality management, our ISO 27001:2013 accreditation for information security management and our Cyber Essentials accreditation. Our extensive eDisclosure work with the UK Government over the last 10 years, including the RM924 and RM3717 eDisclosure frameworks and G-Cloud, is testament to the high standards, expertise and professionalism that Legastat maintains throughout our business.

As the only original litigation support provider in London still operating today, Legastat is a business with a rich history and a vibrant personality. We are proud of our heritage and the core principles of quality, integrity and innovation that make us what we are today.

Vendor Offerings
Along with our full reprographics offerings, Legastat provides a range of software and service solutions to assist our clients with their eDisclosure needs. Our service offering covers both hardcopy and electronic solutions, underpinned by expert project management and technical assistance.

In 2016 Legastat became the UK’s first OpenText Axcelerate Cloud partner in the UK eDisclosure market, greatly enhancing our eDisclosure capability and managed document review services. By incorporating class leading predictive coding and intelligent data analytics to our all-round service, Legastat can match the quality of our eDisclosure technology with our excellent customer focused professional services to support our customers.

Legastat’s focus is on supporting our clients throughout the entire lifecycle of their project. By leveraging the full range of our end-to-end of Litigation Support Services, we can ensure that we offer technical and professional expertise, combined with commercial models that offer value for money and transparency. Our services include digital forensic collection, data processing and early case assessment and document review, all supported by expert services designed to enhance the outcome of your project.

**Company Description**

Lighthouse provides software and services to manage the increasingly complex landscape of enterprise data for compliance and legal teams. Lighthouse leads by developing proprietary technology that integrates with industry-leading third-party software, automating workflows, and creating an easy-to-use, end-to-end platform. Lighthouse also delivers unique proprietary applications and advisory services that are highly valuable for large, complex matters, and a new SaaS platform designed for in-house teams. Whether reacting to incidents like litigation or governmental investigations, or designing programs to proactively minimize the potential for future incidents, Lighthouse partners with multinational industry leaders, top global law firms, and the world’s leading software provider as a channel partner.

**Vendor Offerings**

Lighthouse provides software and services to manage the increasingly complex landscape of enterprise data for compliance and legal teams, whether they’re reacting to incidents like litigation, government, or internal investigations, or designing programs to proactively uncover the potential for future incidents. Through our best-in-class expertise, Lighthouse stands apart as a leader in industry best practices and workflows. Our proactive, high-touch approach has enabled us to build enduring partnerships with the most respected corporations and law firms around the globe.

Lighthouse offers a full spectrum of capabilities to support a wide range of discovery services.

**Information Governance and Advisory Services**

Lighthouse Advisory Services consult clients on the identification and remediation of legal and compliance risk associated with information and technology. Common topics include records management, data classification, data protection/privacy, data disposal and data migration. Emerging areas include those related to cloud migration (e.g., Lighthouse’s M365 CloudCompass) departed employee monitoring, shadow IT, dawn raid preparedness, and operating model enhancements.

**Data and Computer Forensics**

Lighthouse’s dedicated forensics team has deep expertise in global collection and forensics services including, but not limited to, on-site collection, remote collection, cloud-based and social media collection, forensic analysis, and testimony. Lighthouse provides a comprehensive range of Data Collection/Forensic Analysis including the following: full service, onsite collection; remote collection; and supervised self-collection. Our collection offerings accommodate any desired methodology (forensic imaging, targeted collections, etc.) and virtually any data source or computing platform.

**ECA and TAR**

Lighthouse delivers several intelligent review enhancements designed to increase reviewer efficiency: ECA, advanced analytics, predictive coding, continuous active learning (CAL), and TAR consulting services. These solutions provide a more economical, faster, and more accurate way to review a large volume of documents.
((50,000+) than linear review. Lighthouse utilizes an ECA workflow that combines Relativity, Brainspace, and Big Data Analytics. The result is a strategically targeted yet comprehensive approach to ECA.

**eDiscovery Services**

Lighthouse offers a full spectrum of capabilities to support a full range of ediscovery services, including identification, preservation, collection, ECA, processing, analysis, TAR, review, and production. For review, Lighthouse uses Relativity along with its proprietary suite of applications, SmartSeries, which includes the following tools: ReviewSmart™, ChatSmart™, PrivSmart™, and RedactSmart™. In addition, Lighthouse offers Spectra, a proprietary self-service SaaS tool, ideal for internal investigations and smaller matters where in-house experts do not need full-service support but want access to industry-best tools and capabilities and expert resources available to support and supplement them, as needed.

**Smart Innovation**

At Lighthouse, we have built a culture of innovation – it’s at the heart of everything we do. We simplify complex problems using a combination of proprietary innovations and best-in-class, third party technologies, leading to new and better solutions for our clients.

**Enduring Partnerships**

Our clients have been relying on us as technology and service partners for more than 20 years. In addition to innovative technologies, we deliver extraordinary transparency, control, and flexibility to our clients, together with a proactive and high touch service, seeking to delight our clients, develop durable and efficient information governance and eDiscovery programs, and form long-lasting partnerships.

**Best-in-Class Expertise**

Our team has collectively worked on thousands of matters with clients including the world’s largest technology, pharmaceutical, financial services, and retail firms. Lighthouse has long-term partnerships with these multinational companies because we provide expert advice at the forefront of best practices and workflows. We continuously train and develop our teams, broaden our experiences, and deepen our knowledge to offer an elevated level of guidance.
8.1.68 LINEAL

David Holmes – Senior Vice President
dholmes@linealservices.com | +44 (0) 207 940 4799
125 Finsbury Pavement, London EC2A 1NQ
www.linealservices.com

Company Description

Lineal, a global eDiscovery company, provides bespoke solutions to complex client needs, giving them full confidence in the process and the delivered outcome. We operate at the cutting edge of digital forensics, cyber security and eDiscovery technology, using deep expertise to exceed client expectations and defensibly operate within budget and tight time frames.

Founded in 2009, Lineal is a solutions provider with bench strength experience, made up of a team of leading industry experts. Lineal’s rapid growth and success has not changed the companies’ core values; strict ethics, quality service, and bespoke solutions for individual clients. These values continue to prevail and are embedded into the very fabric of our culture.

From the outset, we truly partner with clients to identify the resources and budgets needed to deliver success. We take the time to understand client needs, identifying challenges and developing a clear strategy to deliver predetermined objectives.

Our teams maintain high security that stands up to the explicit management controls required by our ISO27001:2017 certified data security accreditation.

Every member of the Lineal team understands the trust and reliance placed in us by our clients, whether they require support with digital forensics, cyber security and/or eDiscovery services. We select our credentialised teams with great care, and an emphasis on intellect, confidentiality and ethics, and a determination to achieve the best result possible for our clients.

Headquartered in the City of London with regional offices in Asia, Australia, North and South America and Europe. Lineal is ideally positioned to provide an immediate and flexible response to your needs whether in the UK or internationally.

Vendor Offerings

Lineal is a full end-to-end provider offering a global suite of services throughout the eDiscovery matter lifespan. Lineal is supported by the best technical and project management staff in the industry. We use the latest versions of the most powerful eDiscovery technology available to find relevant information quickly and accurately. We are able to provide clients with a clear idea of the scope of the data relating to a particular matter, and the costs of collection and review. We understand the challenges faced by the legal case teams and in-house counsel. Creative solutions to eDiscovery challenges are sought at every turn, working within the EDRM framework, and ensuring all identified data is collected, culled, reviewed and produced in a legally defensible and timely manner.

Services Overview

- Information Governance
- Document Review
- eDisclosure
  - Early Case Assessment
Chapter 8 – Supplier & Software Details

- Technology-Assisted Review (TAR) / TAR 2.0 / Predictive Coding
- Online Review through advanced eDiscovery platforms
- Data Analytics
- Data Hosting
- Data Processing
- Managed Services
- Managed Document Review and Staffing

- Legal Document Services
  - Creation of electronic and hardcopy Bibles and Bundles

Information Governance

Lineal’s information governance services blend expertise and technology to identify, understand, and manage risk. We implement programmes and workflows to guarantee that vital, valuable information is managed securely, efficiently and in accordance with both domestic and international law.

We consult and coordinate with in-house counsel, law firms, and IT teams to identify, classify, normalise and analyse big data, establishing automated processes to deliver critical information to stakeholders in real-time.

Lineal can offer tailored ISO27001, GDPR & DSAR managed services for organisations of all sizes. With our experience and expertise, we can carry out the work necessary on your behalf to ensure your organisation is ISO27001, GDPR & DSAR compliant.

eDiscovery Consulting

Lineal’s eDiscovery consultants connect the technical to the legal world. Using subject matter experts, Lineal consults on the tools and procedures used to ensure your project benefits from industry best practices, making it easier to manage strict timelines and costs. By identifying the biggest challenges relating to your project, we can hone in on a strategy, bespoke to your organisation’s needs.

We provide expert advice, with a focus on data, at each stage: from sitting in on early custodian interviews, to the Case Management Conference or Meet and Confer, through review to production. Lineal consultants become the data experts working alongside your legal team to efficiently and accurately identify, collect, process, review, and produce your documents.

During our consultation, we will work with you to identify:

- Custodians, sources and volumes of data
- Options and strategies for processing and hosting data
- Detailed cost and timing estimates
- Level of review oversight needed for the matter
- Review location at Lineal’s offices or client’s own space
- Review platform and technology selection
- Tailored technology training for your team building upon previous review knowledge
- Additional staffing needs
Our work is supported by a team of project managers who will ensure:

- Accurate and timely results
- Detailed project tracking
- Predictable budgets without hidden costs
- Highest quality of end deliverable
- Regular communication and defensible documentation

Data Collection

Lineal has the expertise required to perform data collection exercises in even the most challenging circumstances. Our team has retrieved data from mobile devices, servers, cloud servers and even drones. We are highly skilled at collecting data from devices which are not easily accessible, such as backup tapes and disaster recovery systems which compress files, making them difficult to search. In addition, we can access previously deleted and/or fragmented files which are extremely inaccessible and require specialised tools.

Lineal maintains a network of forensic collection associates, in addition to its internal workforce, in order to mobilise personnel rapidly across the globe.

Data Processing

A successful eDiscovery project depends on being able to process data effectively. Lineal uses Relativity and Nuix to process data directly, this allows our teams to extract, cull, and deduplicate ESI effectively and efficiently. We can turn vast amounts of data into a usable navigable resource, allowing it to be reviewed in a cost-effective, efficient and defensible manner.

Data processing capabilities:

- Inventory & Analysis
- Data filtering
- De-duplication and metadata extraction
- Keyword searches
- Analytics including email threading and language identification

Hosting and Review

We provide a highly secure platform from which to host data whilst it is being reviewed (Tier 4 datacentre). Our clients trust that sensitive information is held securely, and we have the capacity required to handle even the most complex projects.

Hosting and Review capabilities:

- Review workspace customisation
- Relativity Assisted Review
- Review management and reporting
- Continuous Active Learning / Technology Assisted Review (TAR) / TAR 2.0/ Predictive Coding

Project Management
Lineal is proud to have a team that consists of some of the most distinguished project managers in the industry, who are accredited to the highest level in systems/tools and subject areas of their expertise.

Our team of project managers is the driving force of our high standards for eDiscovery. Not only do they bring the expertise you need, but they also provide an unparalleled level of customer service, making sure all your needs are met. Our project managers work with you as an extension of your team so you can be certain to receive a professional, knowledgeable and prompt response to your needs.

Lineal's project managers work closely with case teams once data is loaded onto Relativity or your chosen platform for early case assessment and/or review; advising on searching, analytics, and technology-assisted review and disclosure productions. Our project managers are able to offer project support and advice in line with industry best practices and due to their extensive experience, they are also able to ensure your projects are successfully delivered in line with your deadlines.

Data Subject Access Request Packages (DSARs)

Data Subject Access Requests (DSARs) can pose a financial and human resource burden on your organisation. To support your team, Lineal offers packages designed for various levels of DSARs. We can collect, filter, review, and produce a compliant DSAR for you within the required time frame at an industry-leading fixed price. Our service allows you to confidently respond to DSARs; keeping you assured that your risk and financial exposure is mitigated and your compliance obligations fulfilled.

- Industry-leading fixed pricing for DSAR packages
- Ongoing support from legally qualified experts
- Collection, filtering, review, and production of DSAR related documents

Managed Services

Lineal’s managed services offer a flexible and tailored approach to our clients’ needs. Based on an unrivalled team heritage of being the first to market with award-winning managed services.

Consolidating and delivering eDiscovery, Litigation Support Services, Information Technology and Infrastructure, our focus is always on efficiency and effectiveness. Whatever the size of your requirement, we have the people, technology, global footprint and resources to help.

We have developed our managed services to give you the best possible solution to:

- Deliver efficiency and cost reductions by minimising the need for capital investment
- Provide you with access to the latest and best technology available
- Give you the flexibility you need to scale up or down to meet the demands of your clients
- Enable you to access our team of industry experts
- Provide full training and support
- An all in one pricing structure and access to leading technology, people, and infrastructure.
- Own or license software and keep it behind your firewall. We can provide software, training, and support.

Managed Document Review
Lineal provides seamless, end-to-end managed document review, helping our clients reduce costs, save time and make litigation more efficient.

Lineal can assist you with a range of document review solutions, whether as a standalone provision or as part of a package with other eDiscovery services (e.g. hosting, data processing, consultancy).

We have an expert team, high proficiency in the latest eDiscovery technology such as TAR, a deep pool of document reviewers, and extensive experience in a range of subject matters. There is no document review project that is too complex or onerous.

Flexible, tailored approach:

We can provide contract lawyers or paralegals to work from your premises under your management. Alternatively, we can have them work from our local, nearshore or far shore document review centres under our supervision and in close cooperation with external counsel. We can also deploy teams to any corner of the globe if documents are unable to leave a particular jurisdiction.

Legal Document Services

Our legal document services production department produces a full range of supporting information for our clients' legal matters. We provide a 24/7 service in order to deliver full and timely support for the most aggressive deadlines.

- Creation of electronic and hardcopy Bibles and Bundles

DIGITAL FORENSICS & INVESTIGATION SERVICES

We are industry leaders in recovering digital evidence in a forensically defensible manner. Our teams are available 24/7 for domestic and international incident response. We continually invest in technical infrastructure and forensic software giving our clients the confidence their project is being managed with the latest equipment and technology.

Our highly experienced digital forensic experts are able to isolate, identify and expose forensically sound evidence from all types of electronic devices and networks. We offer comprehensive, digital forensic investigations to ascertain and pinpoint root causes. Lineal has significant experience in digital forensics and works with in-house counsel for enterprises, law firms, IT firms and consultancies.

Our Digital Forensics and Investigation Services include:

- Data Collection
- Data Recovery
- Misuse and Fraud Investigations
- Intellectual Property and Data Theft Analysis
- Cell Site Analysis
- Call Data Record Analysis
- Computer, Mobile Phone Forensics
- Audio Visual Forensics
- Indecent Imagery (IIC) Forensics
- Expert Witness Service
- Onsite Investigations
**Forensic Readiness Planning**

**Search Orders**

**Incident Response**

**CYBER SECURITY SERVICES**

At its core, cyber security refers to the prevention of threats to digital assets connected via the internet – this includes hardware such as computers, networks, connected devices, and software such as operating systems, databases, email, and business systems.

The strongest form of defence and cyber security best practice includes a strategy of rolling assessment and testing with an effective incident response plan – our experts ensure to continuously develop and provide cyber security solutions that support businesses, and efficiently mitigate attempts of cyber-attacks or data loss.

We partner with clients to help them protect themselves against one of the biggest threats of the modern age. Our cyber consultants work to develop ongoing risk assessments and then implement the policies and procedures required to put all necessary countermeasures in place to limit and contain cyber security exposure.

Our Cyber Security Services include:

- Penetration Testing: Web Application, Network & Infrastructure
- Red Teaming
- Cyber - Health Check & Training
- Vulnerability Assessment Scanning
- ISO 27001-compliant ISMS implementation
- Incident Response
- Simulated Phishing Attacks

</tbody>
</table>

### Company Description

LitSavant Ltd was established by Mark Dingle in January 2010 as a UK technology firm specialising in eDiscovery and litigation support services. Originally founded to assist with the practical application of technology to eDiscovery and litigation support, we specialised in the use of Relativity™ the leading litigation support platform.

As part of our consulting practice we realised that the Relativity platform was missing a simple method of building logical rules to check coding as it happened, rather than searching for inconsistent coding results after the event.

In response to this need, we developed the LitSavant Conformity Engine – a simple Relativity application which performs checks on data entry as it happens, to ensure that the information entered is consistent with logical rules.

We now focus exclusively on the distribution and support of this application.

### Vendor Offerings

**LitSavant Conformity Engine**

This is a Relativity application which enables users without programming knowledge to implement logical rules to ensure coding consistency in Relativity.

The main uses of the application are:

- To prevent users entering coding that is internally inconsistent (e.g. Hot and Not Relevant)
- To automatically send emails to inform key team members about amendments to questions and other custom objects or alert one set of people about the coding done by another (e.g. somebody has just tagged a Hot document)
- To log errors in the coding process
- To maintain a log of who coded what and when that is searchable from within Relativity
- To prevent users from updating key fields after formal production

All of these functions operate not only on documents but also on any other custom object (e.g. Custodians), and can be applied at different stages within the Relativity eDiscovery process. The LitSavant Conformity Engine offers wider functionality than Relativity’s own custom event handler tool and can help users to effectively create or augment applications within Relativity, without developer involvement.
8.1.70 **Logikcull (US)**

</tbody>
</table>

**Company Description**

Logikcull was founded in 2004 by CEO Andy Wilson and CTO Sheng Yang as an eDiscovery services company. After several successful years operating as an eDiscovery vendor -- during which it was named among the fastest growing legal tech companies in the US (Inc #181) -- Logikcull pivoted to cloud-based software, after deciding that the vendor market would eventually collapse due to its opaque fee arrangements, reliance on complex technology, and inability to innovate. Logikcull launched its cloud-based platform in 2013 with the goal of democratizing discovery so that it can be done by anyone, anywhere, and at any time. Logikcull is now based in San Francisco and venture-backed by some of the most well known firms in Silicon Valley. Last year, it grew its customer base 500%, and currently works with more than 1,500 customers across 40 countries, including the AmLaw 200, Fortune 500 and many of the largest city governments. Those wishing to try Logikcull for free can create an account at [https://app.logikcull.com/signup](https://app.logikcull.com/signup).

**Vendor Offerings**

Logikcull provides end-to-end cloud-based discovery software that automates 90% of the processes associated with data ingestion, processing, search, review and production. To get started, you simply drag and drop your data and documents into Logikcull, where they are automatically indexed, preserved, OCR’d, imaged, de-duped, de-nisted, threaded and grouped by family, and organized for easy review. From there, you can run searches; tag, redact and share documents; and leverage Logikcull’s proprietary Culling Intelligence for early case assessment and document culling. Saved searches can then be quickly exported or produced in any format with Bates stamping in a few clicks. Logikcull also provides 24/7/365 in-app support at no additional cost. For more, visit [Logikcull.com](https://www.logikcull.com).

</tbody>
</table>

### Company Description

London Legal supports legal teams and corporate organisations throughout litigation and investigation processes from Paper services to eDiscovery. Working in partnership with clients, skilled technical and consultative teams bring years of experience based on three core values: collaboration with case teams through constant communication; integration by consultative advice and transparency on reporting projects.

### Vendor Offerings

Headquartered in the City of London, our services include:

**Forensic Data Collection** - London Legal Computer Forensic consultants use industry leading tools and methodology to help organisations collect data as the foundation of an investigation or legal dispute. Using the appropriate collection strategy to capture documents and metadata ensures your review and analysis will be accurate with minimal disruption to an organisation's business.

**Data Processing** – Enables document information from different file formats such as raw text and metadata to be extracted, organised and ingested into a single document review platform. Searching for relevant information becomes a simple task and facilitates the requirements case teams need to adhere to in Litigation or ensures admissible evidence is provided in an investigation. Following these steps through one seamless platform gains you access to your case data in a timely, organised fashion.

**Relativity Data Hosting** – Relativity is the industry recognised eDiscovery software platform acting as a single repository of data for your case. London Legal Relativity Certified Administrators (RCAs) support case teams of any size to review large quantities of electronic information regardless of their physical location. Case management becomes an efficient process and completely customisable to preferred workflows.

**Early Case Assessment (ECA)** - London Legal ECA helps you make informed decisions on unfamiliar data sets, assess key issues and ultimately build a strong review strategy. It bridges the gap between the duty to widely preserve potentially relevant data and the expectation to keep eDiscovery costs proportionate.

**Technology Assisted Review (TAR)** - Automates and organises your documents for review based on coding decisions made by your case team. By learning from human intervention, the software accelerates the review process minimising the time spent reviewing irrelevant documents. Case deadlines, document volumes and data types all impact the document review strategy, TAR is a technique you can apply to make the process more efficient.

**Relativity Managed Services** - London Legal provides client domain functionality through an isolated and secure environment for you to manage your Relativity data processing and eDiscovery review workflows. London Legal takes on the
responsible of systems, technology innovation and resources to improve risk management, digitally transform operations and reduce expenditure.

**Data Subject Access Requests (DSARs)** - London Legal supports the full workflow to respond to DSARs with minimal timeframes and costs. Electronic data can be organised, processed, reviewed and redacted for confidentiality or third party PII quickly and efficiently, thus minimising the overall disruption to an organisation.

**Unitisation/Coding** - London Legal provides on-shore and off-shore logical unitisation and bibliographic coding services to assist clients with the processing and management of hard copy and unstructured data. During the logical unitisation process our team uses cues to determine pages that belong together as documents and captures document relationships, such as parent and child attachments.

**Production** - When you’re done with review, Relativity gives you the tools necessary to meet your document production requirements. London Legal’s digital print team uses specialist software and industry leading print equipment to provide high volume legal print services.

**Scanning** - London Legal’s digital services team can scan any condition or size of documents producing them into multiple formats to suit your review needs. All documents and scans are monitored throughout the process from de-stapling and unbinding through to exact reconstruction. Thorough image checking ensures quality assurance before return to the client.

**Digital Printing** – London Legal Digital print teams produce high volume digital prints from electronic data of virtually any format. The process filters, orders, extracts and prints data from legal review tools, emails and attachments, native format documents, or from electronic media including CD/DVD, ftp sites and data sites. There is a range of add-on and finishing options including branding, bates numbering, printed slip sheets and binding.

**Copying** – London Legal’s expert production team has years of experience in high volume photocopying. This ensures the highest quality reproduction, with careful handling of the original documents through deconstruction, copying and reconstruction or finishing as required.
### 8.1.72 Luminance

**Enquiries**

enquiries@luminance.com | +44 (0)20 7592 1200

Maurice Wilkes Building, Cambridge, CB4 0DS,

https://www.luminance.com/

---

**Company Description:**

Luminance is the leading artificial intelligence platform for the legal profession. The fundamental technology behind Luminance is the Legal Inference Transformation Engine (LITE), built from a blend of unsupervised and supervised machine learning and pattern recognition techniques developed at the University of Cambridge. This enables Luminance to not only form an understanding of a document, but then to augment this knowledge by learning from the interaction between legal professionals and the matter at hand.

Luminance’s core engine, LITE, powers applications across different practice areas including: (i) **Discovery**, helping litigators with eDiscovery, arbitration and disputes, (ii) **Diligence**, supporting corporate lawyers with post-executed contract analytics in tasks such M&A due-diligence, property lease abstraction, model document comparison, exposure analysis and associated repapering and (iii) **In-House** to assist in-house teams with pre-executed contract support in tasks such as contract drafting, negotiation and template creation.

**Company Snapshot**

- Launched in 2016
- 100+ employees across offices in London, Cambridge, New York, Chicago and Singapore
- Used by 215+ clients across 48 countries, including:
  - One-fifth of the Global 100 law firms
  - All of the Big Four
- Used in 50+ languages

**Vendor Offerings:**

Luminance Discovery is a proprietary end-to-end eDiscovery platform that uses machine learning to assist legal professionals across a wide range of Discovery related tasks outlined below. Using a flexible approach of either cloud-based or on-premise deployment options, Luminance can be used on any matter of any size in any location in compliance with applicable data regulations.

- Intelligent ingestion, data processing and analytics
- AI-powered Early Case Assessment (ECA)
- Advanced search features including our proprietary Search Term Analyser
- Technology Assisted Review (Continuous Active Learning)
- Productions
- Word-Integrated Work Product
- Both cloud (Amazon Web Services) and on-premise deployment options
Key Features of Luminance Discovery:

Unique features of Luminance Discovery include:

- 3D visualisations of their entire dataset, represented as a document cloud generated from a number of parameters including date and conceptual similarity. Users can zoom, click and manipulate the graphic renderings of their documents in order to quickly grasp an overview of the data in their case and explore what is relevant to them and even identify conceptually similar documents in one click.

- Search Term Analyser enabling legal professionals to optimise search terms by quickly identifying terms that are over or under inclusive.

- Deep Coding, Luminance’s proprietary Technology Assisted Review (Continuous Active Learning) platform – which includes a heat map to confirm that a representative sample of the document set has been reviewed and advanced auto-coding and QC functionality allowing the legal professional to find the optimal balance between speed and quality.
• Luminance Discovery also offers Word-integrated work product functionality. Designed to blend seamlessly within legal professionals’ existing patterns of work, Luminance users can automatically hyperlink all production references contained within a Word document. This ‘live’ document can be then sent out to any relevant person who can instantly access the document in question just by clicking the hyperlinked reference in the Word document.

Key Differentiators:

• Zero set up time making Luminance applicable to projects of all sizes – not just the big ones – such as DSAR requests

• The industry’s most advanced AI platform enabling unprecedented levels of culling and analytics – all for one low rate with no surprise fees

• User training in as little as one hour (no special certifications required), allowing a wider range of professionals to use the system and reducing reliance on costly third parties and consultants

#### Company Description

The Maas Consulting Group was formed in 2016 and is led by Jonathan Maas. Over the past 35 years he has developed significant expertise in:

- Managing electronic and hard copy data in a legal context, whether in the course of litigation during discovery/disclosure, regulatory or internal investigations, due diligence or any other situation where records need to be identified, collected, managed, assimilated and produced; and
- Selecting, implementing and deploying technology to help lawyers work even more smartly in the modern world.

We specialise in working with lawyers, IT people and suppliers, negotiating, delivering cost-effective solutions, writing, speaking, listening, hearing, attention to detail, humour, determination, tact and diplomacy, change management, encouraging the best out of people, removing problems, team work, business integration and getting things done.

#### Vendor Offerings

The Maas Consulting Group’s expertise translates into any number of propositions for different organisations. Examples include (but are not limited to):

- Full coverage of all aspects of the Electronic Discovery Reference Model (EDRM)
- Change management
- Service provider selection and/or management
- Establishing internal discovery teams
- Streamlining existing discovery workflows
- Identifying savings in external litigation spend
- Litigation/discovery project management
- Electronic Documents Questionnaire (Form N264) guidance
- Business integration
- Precedent H guidance
- TeCSA/SCL/TECBAR eDisclosure Protocol guidance
- Early data assessment
- Civil Procedure Rules awareness training
- Case Management Conference preparation
- eDiscovery/eDisclosure strategy/response
- Document reviews
- User and requirements specifications for new software development
- Project management of new software implementation

</tr>
<tr>
<td><a href="https://medbrief.co.uk">https://medbrief.co.uk</a></td>
</tr>
</tbody>
</table>

**Company Description**

MedBrief was founded in 2017 by three eDiscovery Consultants, two based in the UK and one in South Africa. The Company has been in operation since 2011 but only became a separate entity as a result of an MBO from a large UK based eDiscovery vendor.

Since 2017 both the Company and the demand for our services have grown significantly, from an initial team of 5 we now have over 25 staff based between the UK and South Africa and that team is growing all the time. Turnover has increased ahead of expectations and we anticipate that 2019/20 will see this trend accelerate.

We are focused solely on the Healthcare litigation industry, providing software and services which assist in the process, distribution and review of medical files and radiology images. Our software is unique - we don’t seek to compete with the mainstream eDiscovery review applications, but to compliment them or offer an alternative in circumstances where requirements change.

Our software and services are currently being used in over 8,000 clinical negligence and personal injury matters for firms across the UK together with a number of international mass tort and product recall cases for international clients.

Our clients come from a range of industries, while most are law firms we also work directly and indirectly with NHS Hospitals, medical product manufacturers and insurance companies.

**Vendor Offerings**

**MedBrief Secure Review**

MedBrief is both a Company and a piece of software, we own all of our IP and have an in-house development team. The services we provide focus on improving security an efficiency in healthcare litigation.

We are not an eDiscovery company, however we have a deep understanding of eDiscovery having spent many years working within the industry. Our objective is to provide complimentary services specifically in respect of healthcare litigation in circumstances where using traditional eDiscovery software is often not appropriate.

The application provides review functionality for both scanned and native document types together with the radiology images that accompany them.

In addition to the software we also provide the following services to Healthcare litigation teams:

- Obtaining of Medical Records hosting and distribution.
- Indexing and pagination of Medical Records.
- Scanning, pagination and OCR.
- Hosting of Medical records, radiology and other documents.
- Preparation of medical chronologies, summaries and reports.

#### Company Description

After some 30 years of trading as Media Resources, in 2014 we are re-branding as Media Discovery.

Media Discovery is a leading professional tape services organisation, providing tape data restoration services, with specific expertise in identifying and extracting targeted information, for Electronic Data Discovery (e-Discovery), Information Management and Corporate Compliance purposes.

Our mission is to work with our customers to reduce the business pressures associated with tape e-discovery and other tape restoration requirements, by providing them with swift access to required data that resides on backup tape media.

Our Expertise centres on our ability to restore information from virtually all physical tape formats and logical backup formats. Our services are delivered by highly experienced professionals, with tape specific expertise, in our dedicated and secure Data Services centre.

#### Vendor Offerings

**Our Solutions**, both reactive and pro-active, are designed to deliver significant business benefits when organisations are faced with complex and expensive tape preservation and restoration demands. They include:

- Tape e-Discovery
- Tape Restoration on Demand
- Tape Discovery and Remediation
- Audio Restoration & Processing

**Our Processes** enable us to swiftly identify, extract, and return required data, residing on backup tape, via the most appropriate methodologies - and are designed to save time, reduce risk and lower the costs associated with such processes.

**Our Tape Discovery and Restoration services**:

- Incorporate Engineering skills to deliver a highly scalable service.
- Utilise efficient workflows.
- Are subject to strict media management processes that ensure all data is identified, restored and delivered to the client.
- Follow a forensically sound and legally defensible process.

Company Description

Media Resources is a leading professional tape services organisation, providing data storage solutions including data restoration services, with specific expertise in identifying and extracting targeted information, for Electronic Data Discovery (e-Discovery), Information Management and Corporate Compliance purposes.

Our mission is to work with our clients to reduce the risks, costs and business pressures associated with tape processing environments. We address 3 key areas;

1. The supply of tape media.
2. Ensuring the ongoing accessibility of data.
3. The secure retirement of data bearing assets.

Our process allows us identify, extract and restore information from virtually all physical tape formats and logical backup formats, without recreating the original environment, therefore allowing access to required data in the fastest possible time and at the lowest possible costs.

Whether required for e-discovery or other tape restoration requirements, our services are delivered by highly experienced professionals, with tape specific expertise of over 30 years, in our dedicated and secure Data Services centre, centrally located less than an hour’s drive from London.

Vendor Offerings

**Our Solutions**, both reactive and pro-active, are designed to deliver significant business benefits when organisations are faced with complex and expensive tape preservation and restoration demands. They include;

**Company Description**

Merlin Digital Magic builds and hosts software for legal compliance, document management and e-disclosure. Drawing from three decades of experience, the Merlin team develops software to help legal teams automate review, streamline workflow and save on compliance costs.

Merlin is new but the team is not. John Tredennick founded Merlin in 2019 after selling Catalyst Repository Systems to OpenText. He and his team work with legal innovators who want to make compliance more efficient and cost effective.

Our job is to help make dreams happen, turning ideas into digital reality through well-crafted software. That’s digital magic.

**Vendor Offerings**

Merlin specializes in secure cloud computing using advanced open source tools and machine learning algorithms. Its initial projects are bespoke, but the company is developing a configurable platform that can address a wide variety of compliance and legal automation needs. Cloud-based, our systems can operate 24/7, or simply run during business hours at reduced operating costs. Applications can be hosted in your chosen region: EU, Asia-Pacific, South America and the U.S..

Contact Merlin to discuss custom workflow projects or to follow development of its review and workflow platform.

### Company Description

Millnet Document Services is one of the largest and longest serving Document Services businesses in the heart of London.

Incorporated in 1996, Millnet Document Services boasts a wealth of experience and an enviable client base. Working with Legal 500 firms and FTSE 100 companies, our legal and corporate clients testify to our first class performance in offering an impressive range of services under one roof.

Combined, we have over 250 years of experience in the document solutions industry. Our varied client base relies on our ability to leverage this experience to provide a consultative approach to meeting their requirements, rather than just a one size fits all offering. Our 57 staff are highly trained in delivering innovative solutions and we are uniquely positioned to take a client problem, whether that be of space, cost, timeline, or even the necessity of a complete process overhaul, and provide a bespoke, process-driven solution.

At Millnet Document Services we deliver cutting edge technology with traditional client support.

### Vendor Offerings

We are a global enterprise with a local infrastructure, capable of assisting clients in over 60 countries around the world. Our experts are perfectly situated to assist in any project, including live or onsite scanning, reprographics and electronic data printing.

**Photocopying**

We provide a wide range of outsourced photocopying and related services. Housing cutting edge technology our impressive production facilities are capable of handling photocopying jobs of any size 24/7.

**Scanning and Indexing**

We have extensive experience in delivering major document scanning projects, accurately, confidentially, and to the tightest deadlines. We specialise in high volume scanning projects that must be delivered to exacting quality standards. As a company, we started in legal assistance but have now grown into a multi-vertical company that assists corporations, law firms and other professional service firms with their document service needs. We scan to TIFF, PDF and many other formats and create load files for all the leading document management and litigation support packages.

**On Location Support**

We assist clients’ print, index, and bundle projects worldwide, in-keeping with international laws and parameters. We not only have the capability to assist clients close to home, but around the globe. Where a case crosses international borders...
paper evidence from another jurisdiction may need to be included – our mobile scanning services offer the best solution where cost and/or security implications prohibit original documentation from being shipped out of their place or country of origin. From our headquarters in London we can assist with onsite scanning anywhere in the world.

**Bundle Preparation**

We take the stress out of bundle preparation so that clients can meet tight deadlines. Regardless of any last minute changes, you can be confident that the end product will be fit for purpose. Our up-front, process driven, rigorous workflow assessment of your bundle requirements results in certainty of price and gives you the confidence that your needs will be met, while cutting out the confusion and constant changes that are common in this service. We also have the legal expertise of our pool of managed reviewers for production and quality control of even the most complex legal bundles, providing you with peace of mind.

**DocBuster®**

Our solution for batch printing, DocBuster® is powerful, fast and user friendly, taking the headache out of printing electronic documents. Developed in response to commercial law firms’ requirements and implemented in many of the leading law firms, DocBuster® is the definitive batch printing solution.

**Digital Print**

We provide high-end digital print and document finishing services across London to a broad client base spanning multiple market sectors. As part of our digital offering, we own a top of the range iGen 150 digital press, along with a Canon 10000 Imagepress both capable of producing astonishingly high quality print not only at regular ‘A’ sizes, but also larger flat sheet sizes up to 660 x 364 cm.

**Our Security and Certifications:**

- ISO27001 (2013)
- ISO9001 (2015)
- ISO14001 (2015)
- FSC Certified
8.1.79 Milyli (US)

Steve Ankenbrandt, CEO

sales@milyli.com | +1 312.265.0136

415 N Sangamon St. Chicago, IL 60657

www.milyli.com

Company Description

Milyli – which stands for “Make It Like You Like It” – is an eDiscovery software development firm with more than a decade providing eDiscovery solutions to leading law firms, service providers, government organizations, and corporations. Our solutions address common pain points in the review process, like tedious manual redaction workflows, and ensure the most accurate and cost-effective review.

Milyli was the first software firm to develop on top of the Relativity platform, making us the experts in Relativity customizations, integrations, and migrations. We’ve built scores of custom Relativity solutions to integrate third-party applications or systems into Relativity, automate troublesome parts of the review workflow, and bring new functionality into Relativity with applications built from scratch.

Vendor Offerings

Milyli software products integrate seamlessly into Relativity to help with Review and Analysis.

- **Blackout** is the easiest, most comprehensive way to redact information in Relativity. With Blackout, reduce review time, lower costs, and create workflows that increase accuracy.
- **Broadcast** provides the most meaningful reporting for Relativity users who need to measure data points across workspaces and clients. With Broadcast, build granular reports on almost any information recorded in Relativity and pull in additional data to uncover even more insights.
- **Chronicle** is the easiest way to build privilege logs in Relativity. With Chronicle create a consistent, defensible narrative while reducing the expense and time it takes to construct a privilege log.
- **Delegate** is the most robust admin tool for Relativity. Delegate allows Relativity hosts to create user and group level access settings for specific workspaces and matters - all within the same instance.

Customizable Technologies:

Milyli supports any stage of eDiscovery with Relativity-compatible technologies that meet the highest standards of functionality, reliability, usability, and efficiency.

- **Custom Development and Developer Education** to assist with software integrations, infrastructure challenges, workflow improvement, and more.
- **Relay** allows Relativity users to import documents and data directly from SQL-based systems into their instance without load files.
- **Bridge** provides a framework to automate the movement of case data and work product from Concordance and Summation into Relativity — including data not typically supported by load files.
- **Ditto** saves Relativity users time and effort by replicating user permissions across workspaces or between groups in the same workspace.
<table>

8.1.80 Morae Global

Patrick Kellermann
patrick.kellermann@moraeglobal.com | +44 (0) 207 190 9147
Hasilwood House, 60-64 Bishopsgate, London EC2N 4AW
https://www.moraeglobal.com/

Company Description
Morae Global Corporation (Morae) provides end-to-end legal and compliance solutions. Morae’s team of experts is comprised of some of the most seasoned and knowledgeable professionals in the legal industry who are trusted to transform legal and compliance departments worldwide.

Core service lines include Information Management and eDiscovery; Legal and Compliance Consulting Solutions; and Alternative Legal Services. Using performance-based management consulting and technology-enabled information, discovery, and on-demand legal services, Morae is redefining the business of law.

Morae has offices throughout the United States, including in Houston, Chicago, and Washington, D.C., and internationally in London, Zurich, Abu Dhabi, Bangalore and Hong Kong.

Vendor Offerings

Information Management & eDiscovery
Evolving business regulation and exponential growth in data have created enormous legal challenges. Our many technology-enabled solutions apply sophisticated and proven processes to help your legal and compliance teams quickly and proactively address litigation, regulatory and internal investigations; effectively identify and shape your response to key risks; and drive efficiency for the company and its outside counsel.

Policy Design and Implementation
Challenging the typical EDRM-based linear approach, our professionals rely on early analytics, streamlining document reviews and minimizing required resources throughout the project. Our methodology is designed to leverage predictive coding and other analytical tools to minimize volume, cycle time and cost while increasing measurable quality. Our professionals develop strategies based on particular experiences using tried-and-tested technologies, resulting in custom, cost-effective solutions and optimum performance.

Legal Hold Management
We apply a programmatic approach that meets legal requirements that can be performed consistently and efficiently, and demonstrates defensibility through auditing and reporting. Our team specializes in designing and implementing technology and processes, reporting and change management. We serve as expert advisors and provide 360-degree support before, during and after implementation using industry best legal hold technologies including IBM’s Atlas, Zapproved’s Legal Hold Pro and Relativity Legal Hold, as examples.

Forensic Collection
We have a Global network of data collection experts with decades of experience ready to be dispatched 24/7 to support you and your teams. Our team is attuned to local collection and data protection laws to collect in a sound and defensible manner. We use quick data extraction and proven collection methodologies across every data format or device. Every collection option is catered to: In-Person, Remote and Self-Collection. We assist in the recovery of deleted files, password cracking and online email recovery. Our experts examine Microsoft Windows registry, search engine and browser history. Also, last file access,
changes and deletion; phone logs and mobile phone evidence is examined. We deploy state-of-the-art technology to support your data recovery efforts and compile a comprehensive report on results.

**Data Processing & Hosting**

Our Data Analytics team has dozens of processed petabytes of data sourced from every major enterprise data source for thousands of workspaces. We are technology agnostic, meaning we’ve used all leading eDiscovery processing tools to ingest data into a wide variety of review platforms. We host data in our US or European servers, depending on client or project requirements, and were the first company in the world to be a RelativityOne Certified Partner in the UK. There is not a data type or source we haven’t processed and hosted.

Our managed service offering is built around RelativityOne and hosted in the Microsoft Azure Cloud. Our solution is entirely Office 365 ready and offers rapid scalability with state-of-the-art security at low cost, enabling corporate law departments and law firms of every size to meet their data management needs.

We take pride in industry-leading processing through-put of up to 300 Terabytes per day as well as our capability to develop customized processing workflows.

**Data Migration**

With increasing regularity, clients are asking Morae to migrate entire data instances held by other eDiscovery vendors into our environment. Morae recently migrated one of the largest financial sector entities and one of the largest oil/gas sector entities, both of which included top-fold, high-stakes matters in the transfer.

**Managed Document Review – Substantive & Privilege**

Our world-class project managers have overseen the most complex investigations and litigations in modern history. A key differentiator is our focus on understanding subject matter and implementing those insights into project execution with a heavy emphasis on technology solutions.

We help to build the review population by first gaining subject matter understanding, applying advanced analytics for early fact discovery, defining the review population and executing an informed approach. We triage to review in smart batches. This step includes privilege triage, which reduces the risk that privileged documents are missed. Technology and substantive expertise are the foundation for our multi-pronged QC approach. Finally, deliverables and reporting to bring greater meaning to our clients through reports such as Monthly Details & Spend, Daily Status, Issue Summary and the Key Documents Chart.

We offer managed review services in our ISO certified centre or on client site and routinely accommodate foreign language review including but not limited to Arabic, Bulgarian, Chinese, Czech, Danish, English, French, German, Hebrew, Hindi, Italian, Japanese, Norwegian, Polish, Portuguese, Russian, Spanish, Swedish, Vietnamese. Other languages are available upon request. In addition, Machine Translation is available.

**Workflow Development & Special Projects**

Morae is adaptable to deploying differing workflow, from the simple search terms, threading, and review, to more nuanced workflows that leverage analytics or subject matter insight. Our workflows improve accuracy and pace, front load the discovery of matter-critical content, and help clients avoid costs.

As a specific example, we developed a custom workflow to perform trade reconstruction as required by Dodd-Frank or MIFID on an expedited basis. Furthermore, we’re able to create trade chronologies using our custom developed chronology tool that automates the data sourcing from review and facilitates user supplementation.
GDPR, CCPA, and Data Protection

GDPR and CCPA have ushered in an assortment of regulations mandating, among other requirements, that entities understand the contents and interworking of their business and customer agreements. Capture.IQ is our solution to automating that effort with robust QC workflows overseen by industry experts. Capture.IQ leverages unstructured data analytics to extract key contract data points. Automated extraction is underpinned by our industry-specific computer programmers and is subject to validation designed to ensure accurate capture approaching 99 percent.

Morae has also handled hundreds of DSAR matters for dozens of our clients. We’ve developed highly efficient workflows, applied by DSAR-specialized project managers, and have built out a team of more than 220 experienced DSAR reviewers around the world.

Fast-tracked Regulatory Investigations

Morae’s high-horsepower solution framework is purpose-built for ingesting, analyzing, and producing significant volumes of data on tight timeframes. Our approach, toolset and team of experienced professionals are uniquely capable of meeting the demands of second requests, and have been thoroughly proven through our handling of some of the most demanding regulatory investigations in recent years. While we will tailor our approach to the specific requirements and strategic approach of our clients, we also operate from a playbook of principles and methodologies for regulatory requests of this nature. The key tenets of our approach are strong communication, process driven solutions to manage risk factors, and advanced analytics to streamline review for timely delivery.

Advanced Analytics and Predictive Modelling

We are adept in the application of advanced clustering, concept searching, categorization, communications analysis, and other unstructured analytics in matters. Beyond the mere administration of these tools (e.g. Brainspace), we counsel clients in their strategic application as well.

Morae is often engaged to manage predictive modelling, the machine-learning scoring of a dataset by relevance-likelihood based on input from a subject matter expert. We leverage Continuous Active Learning and multi-lingual advanced analytics in every major language, including all European languages, Chinese, Farsi, Korean and Japanese.

Redaction

Morae helps clients to redact sensitive or confidential data in disclosure to external parties. We’re equipped to deploy Blackout, an automated redaction tool that plugs in directly to Relativity and saves time and money in the redaction workflow.

Production

We have produced to every major regulator in the world and countless private third parties. Our robust production QC processes ensure that we disclose only what client and counsel intend and that production is delivered promptly according to specification.

Legal & Compliance Consulting Solutions

Our clients call us outsiders with an insider’s perspective. Our uniquely constructed team includes consultants with decades of experience, as well as former general counsel, law department operations professionals and law firm attorneys. We leverage our real-life experience to help transform your legal and compliance functions into nimble, innovative results-driven teams.

LIBOR Transition Services

Morae is a specialist in providing expedited LIBOR transition and other similar legal and compliance solutions. We can help with end-to-end LIBOR challenges or with any component part of the program. Our capabilities include determining which contracts meet...
the risk criteria, efficient identification and analysis of the data and documents that matter, document drafting and end-to-end negotiation.

We can also support your corporate transactions and other large-scale due diligence and repapering exercises to meet time and budget sensitive requirements. This includes contract life cycle management programs for a wide array of contract types, including commercial, real estate, trading and securitizations. In addition, we help our clients separate fact from fiction in the realm of cutting-edge technology, such as artificial intelligence.

**Alternative Legal Services**

We serve as an extension of your legal and compliance function by deploying skilled and experienced attorneys, paralegals and other professional resources—including process experts, data analysts, and technologists—to help accelerate key initiatives while balancing cost, quality and risk. Legal professionals from our deep and diverse bench can be procured individually or as a managed service, using predictable pricing models, and can be flexed up or down based on business needs. There is no need to increase headcount or infrastructure, or rely on expensive outside counsel.

Morae has performed a critical role in supporting clients to comply with GDPR. We have onsite experts deployed to oversee aspects of GDPR change management programmes.

**Our Technology Partners**

Morae’s multidisciplinary approach combined with decades of experience in implementing third party technology solutions ensures we can help you to cut through the hype and architect the ideal solution to suit your specific needs. We work with over 50 technology partners for a range of legal, discovery, and compliance services.
8.1.81 Netmaster Solutions Ltd / CaseLines

David Jackson
david.jackson@netmastersolutions.co.uk | +44 7827 999669
Belle House, Victoria Station, London, SW1V 1JT
www.caselines.co.uk

Company Description

CaseLines delivers:

- Cost effective evidence bundling and electronic presentation of evidence (EPE)
- Secure, multi-party collaboration
- One-click streaming of video evidence
- Instant on-demand virtual hearings

CaseLines delivers instant benefits to litigators, general counsel and clients. CaseLines simplifies bundle preparation and lowers cost. It allows counsel, judges, court staff and lawyers to work on the same set of documents at an early stage, and to do so securely and remotely. And it saves carbon – for one large client the saving is equivalent to 2,000 trees per month.

CaseLines is used in courts throughout the UK and in the UAE and Africa. The system has been used for over 250,000 cases and holds 65m pages of evidence.

CaseLines

- is the market leading service for the preparation of legal bundles and electronic presentation in the courtroom.
- reduces the time and effort required to prepare legal bundles, eliminates the direct and indirect costs of paper and allows courtroom presentation of the bundles without the added cost of a courtroom operator.
- eliminates the need to pay for third party preparation of digital bundle files.
- provides a secure and easy-to-use cloud based service to collaboratively produce, present and review high quality professional legal bundles, from the office or any remote location.

CaseLines has been providing evidence bundling and courtroom presentation services for litigators since 2010. We now have unrivalled experience supporting litigators with cases of all possible sizes, from 100 page criminal cases to 100,000 page group litigation cases, with everything in between.

Vendor Offerings

CaseLines is a secure web-based service that allows legal teams to collaborate on any legal content in a secure shared workspace from anywhere in the world. The solution evidence also supports fully paperless trials from pre-trial preparation to hearings and final judgement. CaseLines allows users to upload documentary and multimedia evidence into a single location, inviting users in to access the bundle. Users can then search the full bundle, including handwriting speeding up the process of discovery. What’s more, users can review evidence side by side on one window. Case creators also have the option to create sub bundles for specific users, such as a witness file, or for a specific hearing.

Once evidence is uploaded into CaseLines users can annotate the bundle, adding notes as they review which can be exported once in court. In addition, users can share notes with colleagues ensuring effective case collaboration.
When preparing discovery users have the ability to search and redact the bundle. In court CaseLines can be used by counsel and judges to navigate the bundle, directing others to a page or specific time stamp of multimedia evidence.
8.1.82 NightOwl Global (Ireland)

Scott Sterkel
ssterkel@nightowlglobal.com | +1 612-310-4687
Suite 4.03, Ormond Building, 31-36 Ormond Quay Upper, Dublin 7
www.nightowlglobal.com

Company Description
NightOwl was founded in 1991, and offers a complete spectrum of discovery services, including full spectrum discovery management, analytics, review management and litigation/discovery consulting to organizations in demanding industries such as life sciences, finance and construction. Historically, we have worked on some of the largest litigation matters, including most recently an on-going life sciences product liability MDL that includes more than 25 million documents. Large-scale defence experience also includes global oil spill litigation, the silicon breast and penile implant class actions, U.S. tobacco litigation and major lead and asbestos litigations.

NightOwl is a privately-owned US company headquartered in Minneapolis, MN with offices across the US and Europe. NightOwl Discovery Global is a wholly owned subsidiary headquartered in Dublin, Ireland. NightOwl has four major divisions: Discovery Management (discovery services spanning entire EDRM), Review Management (fully managed contract attorney review), Technology Consulting (supporting client-owned discovery systems) and Business Solutions (onsite staffing services).

NightOwl has grown at an average compound annual rate of more than 25% over the past 6 years. We are currently a top-15 global discovery management provider. Our strong growth over the past six years is attributed to the strong service, expertise and unique elements that NightOwl brings to engagements.

Vendor Offerings
The following areas distinguish NightOwl in the industry as we continue to grow year over year:

1) **Deep integration with clients** – NightOwl seeks long lasting engagements with quality clients. We onboard fewer than one new client per month and yet our revenues have grown by double digits for over nine years straight. We have not lost a single discovery management client. We believe that this is due to our commitment in taking the long-term view with each of our clients. We work hard at the outset of relationships to build a deep partnership with our clients. We become part of our clients’ discovery management solution rather than act as an outside vendor.

2) **Innovative programs** – NightOwl is a leader in innovative discovery management programs. NightOwl nVision®, our most popular program, offers clients a flat monthly fee program that includes processing, hosting, analytics and production, along with a dedicated client team. The programs are flexible and can be configured to match your current and future needs. Other programs, such as nTerprise® seek to maximize existing client investments in behind-the-firewall discovery technology by supporting that technology and integrating it with off-premises hosting and review solutions.
We have an efficient program for every client with a significant and ongoing discovery management need.

3) **Full discovery spectrum** – NightOwl is one of the few providers that offers a full spectrum of discovery services, including services in information governance, legal hold notification and preservation, collection, processing, hosting, production, managed review, paper discovery (imaging), and US/EU/APAC data centers. We are a full-service discovery company expected by our clients to handle all aspects of discovery, including elements such as workflow planning, training and education for in-house and outside counsel, and interfacing with corporate IT resources.

4) **International data centers** – NightOwl operates our own international data centers in Dublin (Ireland), Dusseldorf (Germany) and Hong Kong (China). These data centers are built to the same specifications as our secure US data centers, including two-way failover capabilities in the EU data centers. In addition to international data processing and hosting, we also offer Managed Review services in Dublin (Ireland) and Dusseldorf (Germany) and project management in Ireland, Germany and UK.

5) **Woman-owned business** – NightOwl is a certified woman-owned business by the Women's Business Enterprise National Council (WBENC). Certification is a rigorous, multi-faceted business application and review process, conducted by the Certification Review Committee. WBENC certified businesses are nationally recognized and accepted by major corporations and government entities.
## Chapter 8 – Supplier & Software Details

### Company Information

**NUIX RESPONSE:**

Nuix understands the DNA of data at enormous scale. Our software pinpoints the critical information organizations need to anticipate, detect and act on risk, compliance and security threats.

Nuix is built on a history of stability and growth:

- Commercialized in 2006, profitable since 2008
- 40% average annual growth over the past five years
- 2,000+ satisfied customers
- Customers and partners in 70+ countries
- Acquired Nuix Discover in 2018

Our intuitive platform identifies hidden connections between people, objects, locations, and events—providing real-time clarity, control, and efficiency to uncover the key facts and their context.

Nuix and our partners deliver solutions that incorporate our global expertise in cybersecurity, law enforcement, digital forensics, investigation, intelligence, legal discovery, and information governance. We continually innovate to solve the complex challenges our customers face today and build their capacity to anticipate what’s next.

### Vendor Offerings

**NUIX RESPONSE:**

- **Nuix Discover** is an industry-leading legal review and visual analytics tool acquired by Nuix in 2018. Fully integrated processing, review, analytics, and predictive coding technologies help you uncover better evidence, faster, and quickly make it part of your case strategy.

- **Nuix Workstation** is the world’s leading technology for extracting intelligence from high-volume unstructured, semi-structured, and structured data. It provides unmatched speed, scale, and accuracy to processing, searching, indexing, and analyzing the information you need.

- **Nuix Investigate** is a web-based, collaborative, forensic investigations tool in which to share, search, and analyze case data. Powerful visualizations and a simple web interface enable investigators to analyze quickly and arrive at a case position sooner.

www.omnisglobal.com

**Company Description**

Omnis is a new breed of global service partner to the legal and compliance sectors. With offices in Dubai and London we provide an unparalleled service in round the clock document and data management services, for a growing list of high profile clients.

We are one of very few companies focusing on the Middle East region and were the first independent to enter the UAE Electronic Discovery market in 2014. In the UK, we are focused on applying innovative new approaches to assist companies with their ever emerging Information Governance challenges.

Our team is made up of technology experts from leading consulting firms, who are knowledgeable in multi-jurisdictional and cross-border matters, including applicable Middle East, UK and US legal processes.

Founders Ben Gowers and Nigel Murray have a wealth of experience in this sector, having built multiple successful businesses in the past. Their previous venture together, Trilantic, was sold to Huron Consulting in 2010.

**Vendor Offerings**

Our technology experts and solutions help organisations maximise the value of their information while minimising associated risks and costs.

Our practice areas are focused on Disputes, Investigations and Corporate Governance.

Our services consist of the following:

<table>
<thead>

8.1.85 OpenText Legal Tech

Simon Price

simonp@opentext.com | 020 3849 4239
45 Cannon St, London, EC4M 5SH
www.opentext.com

Company Description

OpenText enables the digital world, creating a better way for more than 100,000 organisations to work with information, on premises or in the cloud. As a global leader in Enterprise Management, our products enable businesses to grow faster, lower operational costs, and reduce information governance and security risks. OpenText was founded in 1991 and currently employs 13,100 staff in 104 offices worldwide. For more information about OpenText (NASDAQ: OTEX; TSX: OTC), please visit: www.opentext.com.

Vendor Offerings

OpenText EnCase

EnCase is the world’s most widely used and trusted forensic collections tool - capable of targeting specific files or capturing entire disks for defensible preservation and processing into review platforms, like Axcelerate and Insight (through the acquisition of Catalyst Repository Systems in January 2019). Deployed on over 45 million endpoints, EnCase enables forensically sound and discrete collections from workstations (e.g., laptops, desktops, phones), ECM solutions (e.g., Microsoft, OpenText, Box), smartphones, and more. EnCase even supports automated, offline collections with an enhanced agent that automatically starts and stops transfers as devices are connected or disconnected from the network. EnCase maintains evidence consistency and integrity with its proprietary Logical Evidence File (LEF) format, which accurately preserves all original data as an image file and has been examined and upheld by numerous courts around the world. Collected data can be ported to OpenText Axcelerate with single-click upload functionality.

OpenText Axcelerate

Axcelerate is an end-to-end eDisclosure solution with integrated advanced analytics and machine learning (including multiple forms of machine learning and TAR features). Axcelerate’s analytics are developed in-house, producing rapid search results and a seamless user experience that helps legal professionals prioritize the review of important documents with the assistance of AI. In addition to keyword search, phrase analysis, and metadata filtering, Axcelerate includes integrated visualisations and communication mapping tools. It also features industry-leading machine learning capabilities that automatically organise documents according to conceptual similarity and continuously learn from human decisions to identify similar content. In addition to a full-suite of workflow automation and document production tools, Axcelerate also includes advanced pattern recognition capable of automatically identifying and redacting PII, PHI and PCI like credit cards, phone numbers and more. Axcelerate also offers auto-detection of, sentiment, people and places for additional insight (powered by OpenText Magellan). Simple, secure and rapid translations for 29 languages into English is also available via a platform integration with Veritone aiWARE. All functionality is built into the technology.

OpenText Legal Hold

OpenText Legal Hold is proven, defensible legal hold technology with centralized and automated hold management from a single pane of glass across the enterprise. Hosted securely in the cloud, OpenText Legal Hold can be deployed quickly, with...
no hardware requirements, and integrate with various corporate systems including email, IT, and HR. OpenText Legal Hold can create and distribute targeted legal hold notices rapidly with web-based questionnaires, audit trails, and the ability to automate IT task suspensions to prevent inadvertent data spoliation. Integrated remote collection capabilities are also available.

**OpenText Insight**

Available only in the United States, OpenText Insight is a cloud-based eDisclosure and investigations platform purpose-built for enterprise multi-matter management. Documents can be collected, processed and reviewed once, stored centrally and promoted as often as needed for analysis, review and productions--effectively reusing work product. Analytics, machine learning, and automated workflows help legal teams review eDisclosure and investigations data and documents with speed and accuracy. Specific review features include multi-modal search, visual analytics and social networking, automated pattern detection and redaction of sensitive data, dynamic review workflow, paging and highlights, automated data management from loading and processing to production, and user-controlled automation. Insight allows users to process, search, analyse and review in more than 280 languages, including Chinese, Japanese and Korean (CJK). OpenText Insight Predict machine learning based on the continuous active learning protocol prioritizes reviews and is proven to achieve up to 80% cost-savings and 2:1 efficiency rate average.

**OpenText Legal Tech Services**

OpenText Legal Tech software can be installed on-premise, accessed via your own secure private cloud or on a project by project basis. OpenText is the only company that can offer technology and professional services across multiple delivery models. In addition, OpenText complements the technology offering with a fully staffed first-party professional services team to ensure that clients get the maximum benefit out of technology investments including:

- **Data Collection** - a dedicated team from OpenText using OpenText and other industry standard technology to collect data from multiple data sources within corporations on a project by project, or subscription basis.
- **Managed Document Review** – fully outsourced document review services, leveraging OpenText’s proprietary technology-assisted review tools.
- **Portable Discovery** - OpenText EnCase and OpenText Axcelerate in a ‘box’ supported by our professional services teams when data cannot leave site or jurisdiction.
- **Project Management** - our team of experienced project managers have an average of 10 years’ experience in eDisclosure and have worked on hundreds of projects across multiple jurisdictions, including data subject access requests (DSAR), litigation and arbitration reviews as well as large scale investigations. OpenText project managers work in a consultative manner and ensure every workflow they design fits the goals of your project, and the needs of your client.
- **Machine Learning/TAR consulting** - our team of TAR experts, including data scientists, search experts, lawyers and technologists, can develop optimal workflows to meet client goals in the most efficient and cost-effective manner.
- **Technology Implementation** - our professional services team can provide the full suite of services required to implement Axcelerate On-Premise within your organisation or integrate our Axcelerate Cloud solution into your internal litigation support service.
Managed Services - our team can provide onsite or remote managed services to manage on-premise software technical installation and/or case manage on-going eDisclosure projects with your internal legal teams.
8.1.86 Opus 2 International

<table>
<thead>
<tr>

</tr>
<tr>
<td><a href="http://www.opus2international.com">www.opus2international.com</a></td>
<td></td>
</tr>
</tbody>
</table>

**Company Description**

Over the last ten years, Opus 2 have delivered game-changing legal technology and services that have helped global legal teams conduct some of the most complex international arbitrations, litigation and public inquiries.

Trusted by 96% of the top 50 international law firms, their pioneering cloud-based technology allows legal teams, counsel and clients to access case data from anywhere in the world and at any time, streamlining communication and enabling more efficient management of the proceedings.

The highly-secure Opus 2 platform, tailor-made for lawyers, connects people, case information, analysis and data throughout the lifecycle of a dispute.

**How can Opus 2 help?**

- Connected case analysis – Break down barriers by enabling lawyers to annotate documents, share facts, questions and analysis, and search for information – in one central, secure solution.
- Electronic hearings for arbitration and litigation – Turn your hearing room into a connected environment with an electronic bundle and integrated electronic presentation of evidence ensuring focus remains on the issues in dispute
- Realtime transcription – Connect your entire team to a live feed of the transcript, whether they are in the hearing room or based remotely.

Combined with industry-leading services, Opus 2 powers paperless, cost-effective and efficient case preparation and hearings worldwide.

**Why lawyers choose Opus 2**

“Professional throughout, the Opus 2 team were prepared for and responded to all of our in court and out of court needs. Opus 2 is an intuitive and straightforward software, making it a key tool in proceedings. We could not find anything else which compared to its offering” – Siân Jones, Partner, BDB Pitmans LLP

**Why judges choose Opus 2**

“Opus 2 enabled the trial to be concluded within the allotted timetable, and with the maximum efficiency. It also provided the inestimable advantage, from my perspective, of being able to access my notes made during trial, and the full galaxy of the trial bundles, from wherever I was and at whatever time of day (or night)” – Lady Justice Gloster in her judgement on Berezovsky v Abramovich

**Vendor Offerings**

**Opus 2 Magnum** – a proprietary document management and electronic bundling tool which has made paperless trials a reality and is revolutionising the way in which lawyers access, share and manage their documents in the trial preparation phase and beyond. A versatile tool – Magnum can be used at any stage of the litigation/arbitration lifecycle.

**Opus 2 Magnum Realtime** – a court transcription tool that allows access to the live feed of proceedings as the action unfolds. Realtime is a highly secure, sophisticated portal to your live hearings. Whether they occur in a nearby courtroom or an
arbitration centre in another hemisphere, you may access the entire live proceedings from anywhere – not just from within the hearing room. At the conclusion of the day’s session, Opus 2 synchronises the audio from the live session to the final transcript, allowing all participants to log in and re-live any moment from the day’s proceedings.

**Electronic Presentation of Evidence (EPE)** – any evidence called in the hearing room will be instantly displayed on any number of screens controlled by our experienced EPE officer. If used in conjunction with Magnum, individuals will be able to gain immediate access to their own versions of the documents (with all annotations) alongside the full, clean version of the document that is shared throughout the hearing room.

Alongside the services listed, all clients will be given a dedicated, experienced Project/Case Manager who will act as a primary point of contact, providing consultative services throughout the client’s hearing and ensuring that the transition from a paper to electronic trial bundle runs efficiently and exceeds client expectations.
8.1.87 **Planet Data Solutions (US)**

**David S. Cochran**  
(Chief Operating Officer & Executive Vice President)

**DCochran@PlanetDS.com** | +1 412 638 7423

555 Taxter Road – Suite 150 – Elmsford, NY 10523

Electronically stored information is growing faster than most organisations’ ability to manage it. It can be incredibly difficult to extract, preserve and analyse data from IT systems during a time of crisis such as a regulatory investigation, receiving whistleblower allegations or suspicions of fraudulent activity.

The Digital & Forensic Investigations team at PwC helps clients manage and interrogate their electronic data and navigate the legal and business processes that are mandated by critical events. We also help clients implement preventative measures in an attempt to stop such matters arising in the first place, and ensure they have plans in place to be able to respond if they do.

We have extensive expertise in all aspects of the EDRM, from data identification and classification through to capture, analysis, review and disclosure. This expertise is key in the range of services that we offer, which include legal and regulatory electronic disclosure, regulatory compliance matters (such as GDPR), investigations (including fraud, bribery, corruption, IP theft and data breach, price fixing and other breaches of compliance), disputes, and assertion or defence of claims. Our services can be scaled for any given situation and we have experience of assisting with matters of all sizes for clients across all industries.

Our discovery and investigation support capabilities help clients to locate, capture and search their data to quickly get to the right information, irrespective of data type, volume or location. We help our clients and their lawyers to: conduct an early case assessment to determine the merits of an action and data availability, review evidence in fraud, corruption compliance investigations, conduct privilege and relevance reviews, and disclose responsive information to opposing parties or regulators. In order to do so, we use a combination of industry-recognised, market-leading technology, together with an extensive catalogue of tools and applications bespoke to PwC, including:

- Our purpose-built evidence management tool, Evidence Links, brings all of the data sources that could be considered in an investigation into one place, where they can then be reviewed and analysed - allowing the investigator to see and discover themes faster. Evidence Links automatically builds a chronology of key events and key documents in the form of a timeline, and also allows users to establish links between key pieces of evidence. Installed within our Relativity eReview platform, it can easily be deployed on current and future investigations. Names of individuals and corporate entities can also be sent to RADAR - our bespoke corporate intelligence platform that scans numerous industry-leading intelligence databases - giving the investigator access to key intelligence in parallel to the gathered evidence.
• Our custom-built tool chat processing tool, which allows us to process a wide range of chat message formats (including Bloomberg, Skype, WhatsApp, Microsoft Office Communicator, Reuters, Yahoo!, SMS text and iMessage), identify and remove duplicate, irrelevant and empty chats, and then group together chat logs relating to one conversation thread in communication date order.

We can also assist with project management, drafting and implementing preservation orders, drafting the Disclosure Review Document and disclosure statements, proving compliance, arguing reasonableness and proportionality, conducting first and second stage document review in any language and the creation of electronic trial bundles. We can also assess a client’s eDiscovery capability.

Our proactive monitoring, surveillance and data discovery solutions help clients identify potential data issues at the earliest possible opportunity and gain further insight into the data that they hold. We can then help to design appropriate programmes to reduce the risks associated with poorly managed information and non-compliance with regulation. In providing clients with a robust framework of controls, we help to identify and address operational, security, compliance and discovery risks. Together, we i) implement good practice together with appropriate technologies, ii) account for readiness and maturity in a scalable way, and iii) take control of information to turn potential liabilities into assets.

Our team is comprised of experts spanning 40 countries globally, with forensic technology specialists in the UK being based in our offices in London, Belfast, Birmingham and Leeds.

**Services**

- **Legal and regulatory electronic disclosure:**
  - data capture
  - investigative and review analytics (including Predictive Coding / Sample-Based Learning / Active Learning / Technology Assisted Review)
  - Evidence Links (in-house case management and analysis system)
  - data hosting and searching
  - production of material to varying specifications
- **Know Your Data**
  - Data discovery for GDPR
  - Pre and post breach data identification
  - Defensible data deletion
- **Document review**
- **Investigation support**
- **Forensic accounting support**
- **Managed services**
- **Electronic trial bundling**
- **Data Discovery / Records Management**
- **DSAR support**

- Relativity

**Voice:**
- Nexidia
- Intelligent Voice

**Translation:**
- Iconic

**Analytics:**
- Relativity Analytics
- PwC eDiscovery modules (Calendar viewer, mass-search importing and scheduling, custom gap analysis)
8.1.89 QuisLex

Meena Heath, Chief Marketing Officer
Meena.Heath@quislex.com | + 44 (0) 7880 790509
15 Old Bailey, London, EC4M 7EF
www.quislex.com

Company Description
QuisLex is an award-winning legal services provider specializing in executing complex document review projects for FTSE 100 and Fortune 500 companies, as well as Magic Circle and Am Law 100 firms throughout the world. Since its founding in 2004, QuisLex has been a pioneer in the provision of managed legal services. With more than 1,200 attorneys, process experts, statisticians and linguists, QuisLex delivers solutions that reduce costs, mitigate risks, and enhance quality. The company’s expertise in providing these benefits has been acknowledged by both clients and the legal industry at large, including being recognized by Chambers & Partners as a Band 1 legal outsourcing provider, The New York Law Journal as a top managed document review provider, the Financial Times as a member of its Intelligent Business Top 35, and the IACCM as its "Outstanding Service Provider" for contract management solutions. QuisLex was also recognized by the ACC as a Value Champion for helping its client Deutsche Bank cut its eDiscovery costs in half.

To date, QuisLex has reviewed more than four billion pages, created privilege logs running into tens of thousands of entries and worked on matters before most major jurisdictions and regulatory agencies worldwide. QuisLex is the partner of choice for many of the world’s leading law firms. The company’s clients trust it with complex, highly visible bet-the-company matters, such as global regulatory investigations in the financial services industry or decisive patent litigations in the technology industry. It also has significant experience in competition/antitrust matters, FCPA/anti-bribery investigations, and PII reviews to assist in complying with DSARs and in responding to data breaches.

QuisLex has assisted numerous clients in responding timely and efficiently to high-profile, high-stakes investigations by the Financial Conduct Authority, Serious Fraud Office and Office of Fair Trading. It has also assisted in regulatory and internal investigations throughout the EU and before the European Commission, as well as the Securities and Exchange Commission, Department of Justice, Federal Trade Commission, FINRA and OFAC in the US.

QuisLex holds the ISO 9001:2015 certification for its patented Legal Quality Management System and the ISO/IEC 27001:2013 certification for its Information Security Management System. QuisLex is SSAE 16 (formerly SAS 70 Type II) and in early 2020 received its HITRUST CSF certification.

Vendor Offerings
The company’s litigation services focus on managed document review services, which include complete end-to-end project management and quality control, and seamlessly integrate with outside counsel. QuisLex helps clients to prepare for the first CMC and compile defensible and proportionate disclosure strategies, as well as accurate cost budgets. QuisLex also prepares privilege logs, performs redactions for privilege, trade secrets and confidentiality and have vast experience with reviews involving multiple languages, including French, German, Italian, Spanish and Mandarin.

Many clients involve QuisLex early in a matter to perform services that some might not traditionally associate with a document review provider. While document review
companies may routinely review the documents provided to them, a key aspect of QuisLex’s value-add is to proactively identify efficiencies for their clients, which allows them to streamline the process and review fewer documents where possible. This can include validating search terms and suggesting changes, as well as using statistically valid methodologies for culling document sets, or creating matter-specific strategies to optimize review.

Recognizing the increasing role of technology in document review and the need to continually improve efficiency, QuisLex has established itself as a pioneer in the application of techniques from the fields of information retrieval and statistics to document review. We have and will continue to be at the forefront of using tools such as predictive coding, email threading, metadata analysis, clustering, and hash value comparison, among others, to winnow down the total universe of potentially responsive documents and identify the most relevant documents to review first. We have also developed an expertise in designing and implementing TAR 2.0/CAL workflows for highly complex matters.

Post review, clients rely on QuisLex to leverage the expertise gained during the review (knowledge of the documents, custodians, important issues, and key facts) to assist law firms with activities such as preparing for depositions. This allows law firms to focus on the substantive aspects of the matter, while QuisLex can perform the more labour intensive but critical activities such as searching for, analysing, or summarising specific factual content. Having recently been immersed in the document population, QuisLex attorneys are well-positioned to leverage the company’s search and analytics expertise to perform these activities, and as permanent employees, they remain available despite the common start and stop nature of review and post review activities.

The company’s execution and delivery is further enhanced by the involvement of a dedicated Quality Team comprised of Six Sigma Master Black Belts, Black Belts and Quality Analysts whose sole function in the company is to monitor and improve the quality of the work product delivered. This team serves as an independent check on every project and contributes significantly to their industry leadership. The company’s Six Sigma rigour and the expertise of their Quality Team allow them to execute projects on shorter time frames and with a higher degree of quality and budgetary certainty.

QuisLex also utilizes a highly specialized Legal Technology Group comprised of search specialists, linguists and statisticians that test, refine and validate search results, use statistically valid sampling methodologies to test and validate results, and create efficient iterative feedback loops to drive quality and efficiency at every stage of the project.

Software Information

While QuisLex does not provide its own document review platform or software, they have experience with all of the major platforms, such as Relativity, Brainspace, NexLP, Recommind, Documatrix, Ringtail and LawFlow. A key function of its Legal Technology Group is to optimize the capabilities of the client-chosen platform. QuisLex also maintains a team of technologists and programmers who design customized applications (for example, a privilege log processing application) to extend the capabilities of a given review platform that may not provide certain functionality. At all times, QuisLex securely and remotely accesses the review platform, meaning that the data is never hosted by QuisLex but remains hosted by the corporate client, law firm or third party technology vendor.
## 8.1.90 Rational Enterprise

<table>

<td><a href="http://www.rationalenterprise.com">www.rationalenterprise.com</a></td>
</tr>
</tbody>
</table>

### Company Description

Rational Enterprise was founded in 2006 by the founders of the then most successful provider of hosted e-discovery document review and production services.

Rational is headquartered in New York and has additional offices in Albany, Miami and London and is one of a few companies left that are family owned and managed.

Rational's London office provides full local support with data hosted in the UK and a full team of consultants and project managers.

Rational is a technology and services focused company. Rational work with law firms and large multi-national corporations in both the US, South America and Europe. Rational provide a full range of eDiscovery services utilising proprietary software and a sophisticated information governance solution, that has been purpose built from the ground up as an information governance solution for corporations.

### Vendor Offerings

#### eDiscovery Services

Rational provide a full range of on demand eDiscovery services which range from:

- Forensic consultancy and collections.
- Senior consultancy advising on strategies and approach.
- Data processing and hosting.
- Project Management.
- Cutting edge analytics and predictive coding technology.
- Proprietary review platform – Rational Review.
- Managed Services.

#### Processing and Hosting Onsite – Multi-Jurisdictional

- One advantage of utilising proprietary software and the cloud is that Rational can spin up an instance of Rational Review in any jurisdiction quickly and cost effectively, as there are no additional licence fees to have a separate instance.

#### Review Platform – Rational Review

- Rational utilise a proprietary review platform, which provides cost benefits to our clients, with the same level of functionality as leading platforms on the market.
- Rational Review was created by a litigator to be used by lawyers.
- Rational Review focuses on the user to provide a more intuitive interface for lawyers and a unique and much easier and efficient method of searching.
• Rational Review includes cutting edge analytics and predictive coding technology.

• Law firms have deployed Rational Review behind their firewall as their in-house internal review platform.

**Information Governance – Rational Governance**

• Rational Governance (RG) is a proprietary technology that has been built from the ground up as an information governance platform. RG has been deployed in companies in both the UK and US, including leading defence companies, government agencies, pharmaceuticals and financial services firms.

• RG manages a firm’s data whilst the data remains in place, there is no duplication or requirement to move physical data outside of the firm’s control or to move the data from where it currently resides.

• Once installed the technology will cost effectively assist companies with the following challenges:
  
  o eDiscovery Response - collating, preserving, searching and analysing information in place, including implementing instant legal holds across the firm’s data universe, including desktops and laptops.
  
  o Automate the response for data subject access requests.
  
  o Assist with regulatory compliance – enables firms to react much quicker than other firms and in a much more cost effective and proportionate manner.
  
  o Complete internal investigations without impacting the firm’s internal resources.
  
  o Effective records management, including automating and enforcing a firm’s retention, deletion and/or archive policies.
  
  o Defensible data legacy clean up.
  
  o GDPR Compliance.
  
  o Data breach.

**Company Description**

At **Relativity**, we make software to help users organize data, discover the truth, and act on it. Our e-discovery platform is used by thousands of organizations around the world to manage large volumes of data and quickly identify key issues during litigation, internal investigations, and compliance projects. Relativity has over 180,000 users in 40+ countries from organizations including the U.S. Department of Justice, more than 70 Fortune 100 companies, and 198 of the Am Law 200.

**Vendor Offerings**

RelativityOne is an end-to-end, SaaS platform built on Microsoft Azure, servicing every part of the e-disclosure process, from legal hold through production, including Early Case Assessment (ECA) and investigation. It can be used independently or as a hybrid solution with our web-based on-premises product, Relativity. RelativityOne and Relativity enable case teams to handle the largest, most complex projects using flexible, customisable workflows and powerful search and analytics capabilities - all in a highly scalable environment. **The Relativity App Hub** - comprised of more than 100 applications and integrations - allows users, consultants, and third-party software providers to design, build, and integrate custom applications on the software’s open platform, extending its functionality. RelativityOne and Relativity are available via direct license or through a global network of channel partners.

Learn how organisations around the globe are using Relativity [here](https://www.relativity.com).

For more information, see the entry for Relativity in the software sub-section following this one. (8.2.60)

#### Company Description

Reveal is redefining flexibility in eDiscovery by combining infrastructure, processing, document review, analytics and production into a seamless user experience. Reveal's review platform, available in both a SaaS environment and on-prem, combines user-informed features into a faster, more nimble review experience, and provides channel partners the ability to scale to their client's needs faster than any other industry application. Reveal is used by legal service providers and agencies, Fortune 500 companies, government agencies, and financial institutions in more than 40 countries across five continents.

#### Vendor Offerings

Reveal offers our software application behind a client’s firewall or in a dedicated hosted environment provided by Reveal. Our flexible licensing model provides our clients global access to their data and technology partnerships with other applications like NexLP, Brainspace and others. By leveraging AWS and an Elasticsearch index Reveal is the fastest, most stable technology of its kind and has surpassed older technologies that are unable to manage the largest databases. With Reveal, clients pay for what they need, there are no user fees, no long-term commitments or upfront costs.
8.1.94 Ricoh (US)

David Greetham

dgreetham@ricohforensics.com | +1 713 341 1708

70 Valley Stream Parkway, Malvern, PA 19355 USA

Company Description

Ricoh provides eDiscovery and Information Governance solutions for clients facing business challenges with sensitive, and confidential data. Our solutions allow clients to discover critical information at the earliest stage, proactively manage costs, and mitigate risk.

Ricoh is your trusted partner because our combination of certified expertise and service excellence is backed by an over 80-year global history of innovation and a refusal to be limited by tradition. Ricoh’s history and legacy provides the assurance of business security because when you work with us, the security of your data is our highest priority. Tap into innovation at Ricoh and we’ll steer as you drive digital transformation for your organization.

Vendor Offerings

- **eDiscovery Managed Services**
  We seamlessly migrate your data and applications to our industry-leading cloud environment, provide application support, and troubleshoot issues with 24/7 availability.

- **Infrastructure as a Service (IaaS)**
  Secure and scalable cloud environment supported by our experts who specialize in managing complex infrastructure.

- **Digital Forensics Services**
  Our licensed team of forensics experts will effectively collect your ESI, investigate your matters, and provide expert testimony with speed and reliability for a truly defensible and auditable process.

- **Ricoh Acumen**
  Provides valuable business intelligence and insight from your Relativity environment so you can discover a new level of project ownership.

- **Ricoh eDiscovery On Demand**
  A cloud-based solution that provides full control over the eDiscovery process with web-based access anywhere, anytime. Select the services you want and upload your ESI for processing, analysis, review, and production.

- **Managed Review Services**
  Our licensed and background checked contract attorneys use a technology-driven approach to ensure the amount of review documents is proportionate to your case. This approach helps get to your most critical information fast with scalable attorney coverage and fixed fee contracts.

8.1.95 Servient

Ben Hammerton, Head of Sales, Servient UK & Europe
bhammerton@servient.com 0203 350 1398 / 07711 234 413
48 Chancery Lane, London, WC2A 1JF
www.servient.co.uk

Company Description

Servient are a pioneer of machine learning and cloud-based eDiscovery services. Easy to use and learn, Servient provides savings on the first and every case. Servient allows the client to control as much of the eDiscovery process as they wish. This includes processing, production, creating and managing review teams, running an ECA process and more. Some rely on Servient to help on every step of the way, and others handle it all internally.

For this reason, we describe Servient as being built with ‘Self Service In Mind’

Servient provides these sophisticated technologies with a new pricing model that is reflective of the modern architecture utilised. No more up-front processing fees, no more user licenses that fluctuate throughout the matter and make budgeting difficult, and no more fees associated with analytics and predictive coding.

Put simply, Servient provides robust, scalable, budgetable, and cost-efficient eDiscovery.

Key Points

• Founded in 2003, with offices in UK, USA, and India.
• Servient are known for their Continuous Active Machine Learning technology and workflow, which was first created in 2008 and underpins the whole system.
• Servient is designed and built for the Cloud and is flexible and customisable depending on the organisational needs.
• Servient is provided as:
  ◦ SaaS (software-as-a-service) – on a matter by matter basis.
  ◦ Managed or Subscription Service – manage multiple cases, on a monthly or annual plan

The System

• Self-Processing Application
  Allowing you to process as much data as is needed (not just limited to smaller volumes)
• Early Data Assessment Application
  Explore the dataset, run lists of search terms and prepare data for review, prior to sending the data into the review phase
• Document Review Application
  A fully featured, easy to use document review application. Search functionality included:
  ◦ Standard – Comprehensive Search and Analytics functionality: including keywords, phrases, date range, format, file type, custodian, Boolean and more)
• **Advanced** – Technology Assisted Review (TAR/Predictive Coding) incorporating Continuous Active Learning, Conceptual Clustering, content-based Email Threading etc (included in the base price)

• **Matter & User Management Module**
  Control who gets access and to what level of the case, add or subtract users from a case, create cases on the fly and deactivate them when they complete.

• **Reporting (QC/QA)**
  Multiple dashboards and metrics that show the speed, throughput, and accuracy of a review.

• **Production Module**
  Users can create a template once and re-use it many times. Productions can be run Natively, in TIFF or PDF – with no extraneous charges for tiffing, branding, or stamping.

**Key Differentiators**

• **Self-Service** – especially processing, allowing legal teams to effectively run matters themselves without needing to rely on support from a vendor which will waste time and create service bottlenecks

• **Customisable** – allowing true flexibility, the platform can is configurable to specific requirements in terms of screen layouts, user preferences, etc.

• **Modern Charging Structure** – a simple, budgetable monthly data hosting charge, without up-front costs and other variable charges like Monthly User Fees or Analytics

• **Machine Learning** – Servient provides a sophisticated Continuous Active machine learning technology and workflows. Servient gets the user to the critical and relevant information quickly.

**Vendor Offerings**

The Servient application is wholly owned by Servient, developed with technologies that power the largest web companies in the world. The system provides a simple and intuitive interface that allows easy management of the various stages in the EDRM.
8.1.96 Sky Discovery

**Martin Flavell (Director)**

**mflavell@skydiscovery.co.uk** | [+44 (0) 207 562 8999 | +44 (0) 7486 444303

**Level 17, Dashwood House, 69 Old Broad Street, London, EC2M 1QS**

**www.skydiscovery.co.uk**

### Company Description

Sky Discovery is a privately-owned eDiscovery consultancy business with offices in the UK, Australia and India, specialising in group litigation, construction litigation and multi-party complex litigation projects. We offer premium project management and consulting expertise by a team of highly experienced eDiscovery experts. Services include data collection, processing, Early Case Assessment and document review utilising advanced analytics features and workflows.

These services can be provided in a fully packaged managed service which includes the implementation and maintenance of the software and infrastructure. Sky Discovery has implemented a number of managed service contracts with top tier global law firms.

Our key focus is to assist legal teams with document review, applying technology effectively to gain maximum efficiency during the review processes and reducing overall litigation costs.

Our services are wrapped around powerful all-in-one solutions which means data only exists in one platform throughout the lifecycle of the project, minimising the risk of data errors that occur when using multiple software products.

Sky Discovery offers leading industry software solutions as well as proprietary solutions.

Relativity: As a Relativity Premium Hosting Partner, we offer the full suite of Relativity products and latest features hosted out of our data centres in London and Sydney. Sky Discovery has 7 RCA certified consultants and a number of consultants also hold specialised Relativity certifications include Infrastructure Specialists and Analytics Specialists.

Nuix Discover (formally Ringtail): Utilising Nuix’s powerful data processing engine combined with industry leading visual analytics features, we offer our clients another best-of-bread solution supported by our expert team.

Our philosophy is simple, we want to provide the best technology at a price that is truly accessible for all clients, and offer market leading service and expertise that delivers exceptional value.

### Vendor Offerings

Sky Discovery offers a consultative approach to eDisclosure projects and acts as an extension to a firm’s in house team.

**Areas of Expertise:**

**Identification & Collection** – Our expert consultants work with legal teams to assist identifying where potentially relevant data exists using tried and tested workflows and to make sure the process is compliant with court requirement such as EDQ’s and DRD’s. Through our network of forensic experts, we specialise in collecting many types of data including mobile, web and complex structured formats.
### ECA
Utilising visual dynamic dashboards, our simplified ECA offering allows legal teams to access the data early prior to review so they can make informed culling decisions early, resulting in a richer review set and reducing review costs.

### Review
Sky Discovery consultants work with legal teams on litigation projects, information governance activities, regulatory requests and internal investigations, ensuring the technology is applied effectively and providing high end consultancy & project management support.

### Analytics
- Utilising the full suite of analytics tools, from the basics of email threading and near-duplication, to more advanced TAR and predictive coding technologies such as CAL, we help clients reduce large datasets to manageable review levels.

### Document Productions
- Assisting firms with disclosure and other production requirements, we blend the software’s capabilities with years of experience. Automated and templated QA processed minimise the risk of producing privileged documents to the opposing party.

### Project Management:
Project Management sits key in the successful running of a project. Sky Discovery has developed a structured approach to Project Management which allows us to be in complete control throughout the entire project lifecycle. Central to this is our collaborative project and task management tool which, through the use of templates, is designed to enforce consistency and ensures instructions are accurately recorded. Communication, time recording, and billing stats are all recorded within the system ensuring all information is in one place.

### Specialist areas:

#### Construction Litigation
- The variations tables application makes review of complex construction matters manageable in an efficient manner, linking variation requests and site instruction with all related document in the document set.

#### Group Litigation
- This all-in-one automated solution reduces the administrative burden of matters with 1000’s of claimants by integrating a number of smart technologies.

#### Complex, non-standard data conversion
- Not all data can be processed using standard tools. Our team of technical experts and IT specialist can unravel the most complex data set and provide them in a reviewable format.
8.1.97 Smith & Williamson LLP

John Holden
john.holden@smith.williamson.co.uk | 020 7131 8128
25 Moorgate London EC2R 6AY
www.smith.williamson.co.uk

Company Description
Smith & Williamson was founded in Glasgow in 1881 and has, for many years, combined an independent firm of accountants with an investment management and private banking house. Our business spans 12 principal offices and 1,500 staff located across the UK and Ireland with a turnover of approximately £212 million to April 2013. We provide audit & accountancy, forensic services, tax and financial advisory services to corporates, owner-managed businesses, professional practices and private clients.

At Smith & Williamson, our prime aim is to help clients achieve their financial ambitions, both corporate and personal, focusing on wealth creation, wealth management and wealth preservation. This unique approach singles us out from our peers and larger competitors, being the only UK financial services firm to combine a top 10 accountancy practice (Accountancy Age 2014) with an investment management and private banking house.

Vendor Offerings

Forensic technology
Our forensic technology team provides a scalable and technically focused solution to issues surrounding the recovery, retention, investigation and presentation of electronic data, both in investigations and during the disclosure process.

Our team
With over 40 years’ combined experience, our team consists of former police officers, IT professionals and lecturers who are not only technically adept, but commercially minded ensuring minimal disruption to a client's business. We can assist those less experienced to gain the maximum benefit from the technology and suggest appropriate ways to maintain proportionality.

Investigations
Working together with our forensic investigations team, we investigate both criminal and civil cases and can:

- secure electronic data using overt or covert techniques
- review servers with minimal disruption to networks
- identify and recover deleted and hidden data from all forms of electronic media
- provide clear, non-technical reports on our findings.

e-disclosure
We offer a complete e-disclosure solution that:

- consults, collects and prepares documents for electronic review
- reduces the cost of e-disclosure through flexible charging structures
• saves time and money through more cost-effective planning
• simplifies even the most complex e-disclosure exercise through advanced analytics
• delivers cost efficiency to clients
• allows our clients to regain control of the case.

At the heart of our e-disclosure solution is IPRO Enterprise - featuring Early Case Assessment, web-based review including computer assisted review, near duplicate analysis, concept clustering and high speed processing tools. With these tools, clients can choose to manage the e-disclosure process themselves or our multi-disciplined team is on hand to guide them through any stage of the process if required. By working as part of the client team, we give the insight and assistance needed to ensure a smooth e-disclosure exercise every time.

8.1.99 SullivanStrickler Ltd

Elaine Brophy, Director of UK Operations

ebrophy@SullivanStrickler.com  +44 7841 463998
Unit G14, 22-25 Portman Close, London, W1H 6BS
www.sullivanstrickler.com

Company Description

SullivanStrickler was formed in 2013 by Shawn Strickler & Brendan Sullivan. They met in 2003 when Brendan became CEO of eMag Solutions responsible for transitioning the company from a tape manufacturer to a services provider. Shawn was appointed VP, Business Development, together they developed an industry reputation as the "go-to" place for discovering data from tape. They both left eMag in 2011, joining forces again in 2013 to form SullivanStrickler Ltd.

SullivanStrickler is headquartered in Atlanta, Ga, with full-feature data centres in Atlanta, New York, Austin, and London. The company focuses on creating software and services to solve the client’s complex challenges with unstructured data, such as is found on legacy backup tapes, e-mail archiving platforms, content management systems, and voice or video recording systems. Our experience in the tape backup and archive environment is deeply technical, business-based, and used to support legal and compliance-based requirements. Our team provides the skills and knowledge across backed up data applications, tape technologies, core guidelines of emerging data privacy regulations including GDPR, secure vaulted environments, and the cloud.

Born from a passion for innovation and solving complex data challenges, our legacy solutions are the most advanced in the world. We improve data insight providing access to all media and data formats and adding structure to legacy data where it previously did not exist. Removing IT and discovery costs via elegant solutions, enabling the retirement of non-essential support and licensing costs for legacy environments. We reduce the risk of over-retaining, losing, or misplacing legacy data, moving it to our ISO/IEC 27001:2013 certified management facility.

Vendor Offerings

SullivanStrickler specializes in the resolution of complex data availability issues. Our engineers are experts discovering usable, valuable data from legacy tape backup environments, with a deep understanding of the myriad of environments where legacy data resides and was created.

Legacy Data Managed Services

Allows clients to manage their legacy data within the lowest cost structure possible while facilitating ad hoc restores of their data on demand. Companies that want to consolidate / streamline their eDiscovery and legacy data operations in one ultra-secure environment, we offer comprehensive, tailored, solutions, for a predictable monthly fee. Enabling clients to retire legacy data backup infrastructures, partially or in their entirety, while still efficiently responding to data requests. Delivering faster time-to-data and greater data insight, removing costs and risk, SullivanStrickler’s Legacy Data Managed Services is the only offering of its kind.

- Store your legacy data at our HAV (High Availability Vault). Restore it on demand.
- Emulate your target backup infrastructure in our HAV. Access it remotely as needed.
• Virtualize or host your actual target backup infrastructure with remote access.
• Replace target backup infrastructures with our SaaS applications Invenire & TRACS.
• Instantly find target files and remotely restore the same day.
• Create a hybrid of the above options, crush budgets and exceed responsiveness.

Tape Restoration for Data, Voice and Video

SullivanStrickler provides the most reliable expertise and the fastest, most advanced data-recovery technology available today. Restoration from backup tape requires knowledge of backup software, tape formats, and agent-based backups. Our engineers have all these skills amassed over the last 30+ years.

Our developers create routines for varying levels of interrogation into data on backup tapes and back up sessions. Continually developing solutions for all data variances we are challenged with. We have a database of back-up environments that is unparalleled. Our technology is fast and flexible with unmatched reporting for audit trails and defensibility. If data must remain on-site to be restored, our proprietary technology can be deployed globally on-site at any location within 24 hours, in most cases. Our team of engineers arrive with the necessary equipment, and perform the restore with little to no downtime or disruption to the client.

Forensics and Collection Services

SullivanStrickler has certified forensic experts who manage every facet of forensic data recovery. Identification, acquisition, preservation, analysis, and documentation of electronically stored data are coordinated for our clients’ use. Our forensic experts increase the efficiency and accuracy of the digital forensic investigation process, without altering or compromising fragile digital information or risking defensibility. Holding a variety of certifications, including CCE, CHFI, & EnCE, our team can perform onsite or remote collections anywhere in the world.

Offboarding as a Service

This solution is for clients wanting to be proactive in collecting vital data from departing employees. We provide a portable, turn-key eDiscovery protocol for preserving legal-hold data. This on-demand, subscription-based offering includes the forensic collection of portable devices, case lifecycle retention management for preserving legal-hold data to ensure business continuity, and hosting of relevant metadata in our secure cloud-based environment, Invenire, enabling secure early case assessment and storage of evidence for future use.

### Company Description

SFTS Engineering’s goal is to turn our team’s extensive industry knowledge into a set of applications to improve the efficiency and accuracy of work performed on litigation and IT Forensic projects.

Our team consists of eDiscovery and IT Forensics experts who have worked on numerous projects for a wide variety of clients. The applications that SFTS Engineering develops are primarily created to solve issues and fill in feature gaps that have been discovered by our team while working on live projects.

We don’t just develop applications; we use the tools we create every day to make our tasks easier and our work more reliable. SFTS Engineering is taking this knowledge sharing process a step further by enabling the entire industry to benefit from our experience.

### Vendor Offerings

#### Penumbra (Relativity add-on): Mark-up Management and Auto redactions

This application streamlines the redaction process when reviewing documents within your eDiscovery environment. Key features include:

- **Automated redaction** of keywords or regular expressions
- **Entity Recognition:**
  Easily extract entities from emails and benefit from a fully automated redaction process.
- **Pseudonymisation:**
  Pseudonymise sensitive information relating to companies, individuals or other information relating to the same entity.
- **Readback:**
  Allows you to leverage your existing work by extracting the text under your manual redactions, enabling you to add the knowledge to your automated workflow.
- **Enhanced Precision:**
  Penumbra leverages pattern matching technology to catch even more hits that might be missed due to OCR errors.

#### Transfer Vault (on premise solution): Secure File Transfers

Transfer Vault is a robust stand-alone file transfer server, which can be used internally or with clients. It is designed to be user-friendly, and has built-in end-to-end encryption as well as auditing features to securely setup a communication channel for sensitive data between involved parties.

#### Illuminate (Relativity add-on): Manage and Share Highlights

An application to extend the feature set of Relativity’s document review and production capabilities. Key features include:

- In-line document highlighting and commenting
• One-click navigation to relevant sections in a document
• Advanced summary features showing relevant text and associated comments

**Custom Development:**
If you have a problem that our suite of applications cannot solve, SFTS Engineering can develop a customized solution to meet your requirements. Our application developers are also experienced experts in eDiscovery and IT Forensics, which enables us to better understand your situation and to work alongside your team to create the most effective solution.

See overleaf for software information and certificates
Software Information and Certificates

Entity Recognition
- Easily extract entities from emails and benefit from a fully automated redaction process.
- Penumbra’s built-in entity recognition technology extracts email addresses, names, phone numbers and other information to build search rules that can be applied to your workflow.

Pseudonymisation
- Penumbra does not simply draw black boxes, but allows you to pseudonymize sensitive information relating to companies, individuals or other information relating to the same entity.

Security
- End-to-end AES 256 encryption with randomly-generated keys and randomized strong passwords
- Provides fine granularity and control over who has access to transferred data
- Automatically avoids data insecurity through user error (such as weak passwords or incorrect settings)
- No access to data through the platform administrators.

Ease of Use
- Drag and drop transfers while preserving the full folder structure
- As simple to use as the widely popular data sharing platforms in the cloud

Manage and Share Highlights
- Illuminate gives you an overview of comments from multiple team-members across your document set, saving you hours of wasted time organizing team comments across documents and showing you why a document was marked relevant.
8.1.102 TCDI (US)

Elizabeth Wagoner
e_poole@tcdi.com  | +1 336-655-9959
4508 Weybridge Lane Greensboro, North Carolina 27407
https://www.tcdi.com/

Company Description

TCDI was founded in November of 1988. In the beginning, TCDI serviced a few select clients, managing complex database applications for the U.S. Government. Their deep understanding of their clients’ needs and challenges enabled TCDI to create an unparalleled eDiscovery platform. Over the past three decades, TCDI has grown to 97 employees, with offices in Cleveland, Ohio and Greensboro, North Carolina. They have expanded their services to include forensics, processing, hosting and review. In 2017, TCDI added managed document review to their integrated services, which supports various document review models, including creating career opportunities for military spouses through their Military Spouse Managed Review program. TCDI has created a home office for their team of full-time reviewers, flex-time reviewers and project managers in their headquarters in Greensboro, NC. Through the pairing of design, streamlining review workflows and further automating document review TCDI continues to lower costs for their clients.

What differentiates TCDI from competitors? Their clients have become true partners, guiding them in the development of their tools, technology and processes. TCDI offers proprietary processing and analytics-driven hosted review products in order to provide the correct solution for each clients’ budget and needs. Their ClarVergence Suite (CV Suite) is a product of TCDI development, allowing the customization of their flagship product, CVLynx. Through continuous process improvement TCDI, using CVLynx, continues to develop strategies to help clients decrease risk during cases, control and predict budgets and ultimately allow their clients to put the focus back on their core business. Thinking differently is what TCDI does best.

Vendor Offerings

TCDI specializes in large-scale litigation case management, eDiscovery, managed document review, computer forensics and cybersecurity. Their innovative proprietary legal technology solutions help clients solve legal challenges by efficiently organizing and managing large volumes of data. Their technology is designed to decrease client cost by reducing data volumes and making human review and production more accurate. They continue to build scalable and customizable technology and platforms for law firms and corporations, both small and large. In addition to technical support, they offer project management and unparalleled customer service.

Through their ClarVergence Suite (CV Suite), TCDI provides legal services that support the entire eDiscovery process. For large matters, they created CVLynx, which supports both case management and eDiscovery. For smaller cases, TCDI’s clients can use CVFox. Both platforms are built on CVOnx – their proprietary modular-based processing software capable of ingesting large volumes of data quickly to prepare for review. From data processing through managed document review and production, TCDI has the internal systems and capabilities to help clients manage, organize and analyze large volumes of electronic information. In addition, CVLynx and CVFox as a review platform offers reviewers a simple and easy to use option for predictive coding and prioritized review.
As cybersecurity attacks become a growing problem for businesses due to the increase in the number of attacks as well as the rise of the costs associated with them, TCDI understands the importance of data security and privacy. Their team of trusted advisors comprised of security experts and industry thought leaders take an innovative approach to data security services. By combining “best of breed” technology with their proprietary cybersecurity assessment application, TCDI creates tailored solutions for their clients. TCDI’s cybersecurity services include: cybersecurity assessment, penetration testing, comprehensive security monitoring and management, policy and plan development, data breach response and investigative services, security awareness training, access to a team of certified and highly skilled experts on an “as-needed” basis and law firm security evaluation. Additionally, TCDI specializes in computer forensics. In today’s world, evidence is rarely preserved on paper, making it imperative to know how to collect digital evidence and recover data. TCDI has certified forensics analysts, trained to collect and analyze electronic evidence following forensic methodologies and procedures.

Company Description

The Oliver Group (TOG), founded in 1997, provides data forensic and media restoration e-discovery services to corporations, litigation support providers, and law firms.

TOG is a proven, reliable partner with extensive experience that includes some of the world's most publicized corporate legal actions of the last decade. Our North American headquarters are located in Connecticut and our European Union headquarters are located in London.

What We Do

TOG helps clients navigate the early stages of the e-discovery process through service offerings that include:

- Data Acquisition & Forensic Analysis.
- Media Restoration & Conversion.
- Data Preservation & Remediation.
- Data Filtering, Culling and Searching.
- Litigation & Compliance Readiness Assessments.
- Consulting & Project Management.

Vendor Offerings

- Data Acquisition & Forensic Analysis – onsite or remote
- Media Restoration & Email Conversion – via Native process
  e.g.: GroupWise to .pst
- Data Preservation & Remediation
  One to one copy,
- Data Filtering, Culling and Searching
- Data Migration
  e.g.: Exchange to Office 365 from backup tapes
- Legacy System Decommissioning
- Litigation & Compliance Readiness Assessments
- Consulting & Project Management

We use industry standard tools such as Encase, FTK, Cellebrite, etc. as well as our own fully defensible developed in house software.

Charles Lilwall, Account Executive

clilwall@transperfect.com | +44 (0) 20 7061 2039

Aldgate House, 33 Aldgate High Street, London, EC3N 1AH

www.transperfectlegal.com

Company Description

TransPerfect Legal Solutions (TLS) empowers legal professionals to leverage AI, analytics and multi-language technology across e-discovery, forensic consulting, due diligence, privacy, managed review and staffing projects. TLS delivers software and service solutions to every Am Law 200 and Global 100 firm, and the majority of Fortune 500 corporate legal departments.

Founded in 1992, TLS has a worldwide presence with over 100 offices and a global team of legal experts. TLS’ consultative approach is supported by an extensive network of resources with proven success in solutions engineering, problem solving, and forging a seamless partnership that clients regularly trust and rely on.

TLS customizes service offerings to support the scale, urgency, and scope of each project. Whether your business requires specialized solutions to cull and focus data for discovery in multiple languages, protect against a potential data breach or automate clause comparison in a due diligence, We Know How.

Services Offered by TLS

Forensic Technology & Consulting

TLS resources and experience allow us to efficiently collect and analyze electronic data from virtually any type of storage device or media. Our solutions are available on-site, in one of our laboratories, or through remote-kit equipment shipped to client locations anywhere in the world. With extensive knowledge of privacy and state secrecy laws, TLS is equipped to deploy on-site culling, filtering, and review. From early data assessment and rapid deployment, to secure evidence storage and expert witness services, we provide a cost-effective forensic and discovery workflow for any circumstance.

E-Discovery Processing

TLS provides comprehensive ESI solutions by utilizing cutting edge hardware and industry-leading applications to process electronic data. Recognizing that raw speed is essential when processing large volumes of ESI, we have invested in an extremely powerful processing environment—ingesting up to 17 TB per day. With over 20 worldwide production centers working around the clock, TLS can quickly turn around large amounts of data in a matter of days. We have the ability to process data in-house or—if needed—to work on-site to convert files for processing. Our skilled ESI specialists will work with you to create a customized e-discovery plan that fits your needs.

Our state-of-the-art EDA tools allow the TLS team to:

- Accelerate early data assessments from weeks to hours
- Lower processing costs and increase turnarounds by up to 80%
- Process large volumes of data 8-10 times faster
- Reduce review workload by up to 90%
• Wrap up investigations 10 times faster
• Maximize defensibility and control of e-discovery processes

**Data Hosting**

As one of the first e-discovery providers to adopt and offer the Relativity platform, TLS has established a reputation as an industry leader in hosting technology. TLS has achieved “Best in Service” for four consecutive years among Relativity Partners, and has been awarded Orange-Level status for our commitment to customer service, technical expertise, and technology knowledge.

TLS has developed a proprietary translation-on-the-fly tool that works directly within the Relativity interface. This machine translation functionality allows instant translation between 30+ different languages. TLS has also built a human translation workflow into Relativity, which can push documents into the TLS human translation pipeline, thereby minimizing the client-side administrative overhead of handling translations.

TLS was one of the first adopters of Technology Assisted Review (TAR) methodologies and regularly employs them utilizing the Relativity Assisted Review module and Brainspace.

**Document Review**

TLS maintains top-of-the-line review centers in most major cities in the US, and internationally as well. These secure facilities seat as many as 50 people and are available to all TLS clients pending schedule availability. With offices in over 90 cities on 6 continents, TLS has an unsurpassed network that ties clients in to vast global resources for review space in virtually any location in the world.

When a review engagement has a multilingual requirement, TLS is the ideal partner to deliver what you need. Whether it’s a managed review in Japanese, an on-site team of 10 in Beijing, or an on-site review of a multilingual document set in New York, TLS has the qualified linguistic resources to handle even the most complex requirements. Hybrid teams of linguists, paralegals, JDs, licensed attorneys, and project managers collaborate to ensure that your multilingual review meets the quality and readiness of any project despite language requirements.

**Language Services**

With a deep understanding of the stringent regulations of the legal world, we create tailored solutions based on the size, subject matter, multilingual requirements, and price limitations of your case. TLS provides language services such as large-scale multilingual and English document reviews, quick summary translations, and interpreters for depositions—all of which are backed by our certified quality management system and worldwide 24/7 production capabilities.

**Court Reporting**

The TLS Deposition Support and Court Reporting group was built to provide world-class services and solutions to our clients. To that end, we maintain an elite staff of expert court reporters and case management specialists who are versed in handling complex litigations, specific subject matters, and all types of legal proceedings.

Unlike many agencies that work through intermediaries, TLS corresponds directly with every court reporter we use, allowing us to instantly check availability, relay client requests, and monitor deliveries. Our reporters and production staff are keenly aware of our high expectations for excellence in punctuality, demeanour, accuracy, and speed, both on-site and in final transcript deliveries.
TLS reprographic centers are specifically designed to handle the intense physical document needs of litigation. With strategic locations in major markets around the world, TLS’s paper discovery and production capabilities include:

- Document Scanning
- Copying and Collating
- Printing (High Volume, Color)
- Binder Preparation
- Large Format Documents
- Trial Demonstratives
8.1.105 TSD Services Ltd (Bulgaria)

Plamen Dobrev, Sales Specialist
sales@tsd.com | +359 2 870 2036
Tsarigradsko Chaussee 115A, Fl. 7, Sofia, Bulgaria
www.tsd.com

Company Description
TSD Services is a medium-sized Bulgarian software company founded in 2007 in Troyan, Bulgaria by CEO German Gachevski. It provides high-quality and cost-effective software development and IT outsourcing services to its clients from different global locations and industry segments.

Since 2013, TSD has immersed in the eDiscovery field, launching its own product line and services for the Relativity platform, and actualizing an increasing number of custom application development projects.

TSD is a proud possessor of an ISO/IEC 27001:2013 certificate.

Vendor Offerings

Custom Development for Relativity
You have a killer idea about a Relativity-based application that can help your organization run the business more efficiently? You are looking for a Relativity Custom Development Partner who can develop an application tailored to your specific eDiscovery needs?

During the years of our Relativity experience, our teams have successfully realized more than 60 custom development projects for a number of clients as well as for the Relativity ODA. Our current portfolio consists of projects, which encompass various fields and are different in size, including large-scale projects developed for a period of several months as well as scripts built in a matter of hours.

We have built up extensive expertise with:

- **Connectors with different platforms**
  We have built various applications which connect Relativity with different external systems such as translation platforms, FTP/SFTP servers, external services, etc. The final products have allowed for a smooth two-way connection including user-friendly UI, good logging and monitoring capabilities.

- **Applications utilizing AI services**
  The majority of projects that TSD has developed employ innovative technologies and embrace the vast capabilities of AI. We have worked on building applications that utilize IBM Watson and Azure Cognitive Services, which have helped on a faster, more efficient and accurate document analysis in the clients’ legal cases. We have also designed an analytics application which uses SVN models to classify documents in a case.

- **Applications for managing Relativity and exporting data**
  We have built various applications which improve the management of workflows in Relativity such as case managing apps and case monitoring apps. Our teams have developed applications which provide different export options for Saved Searches, folder structures, etc.

- **Tools for visualization and processing of audio and video files in Relativity**
  We have created applications which offer broad capabilities of playing audio and video files in Relativity. They also provide users with the ability to interact with the
information in the files while reviewers are enabled to code the documents accordingly.

- **Various types of Relativity Scripts and tools**
  
  TSD can help you turn your idea into a time-saving or revenue-generating reality, providing you with a designated Relativity team which will provision the full lifecycle of the project from the initial design to testing and final implementation.

**Relativity Applications**

We explored our clients’ most common challenges in running eDiscovery operations and extended Relativity by building our own Relativity-based applications to solve their difficulties and make requests a reality.

Our current Relativity integrations are:

- **MaxBilling** - a Relativity-based application that automates the billing process experience and streamlines the invoice-to-cash cycle. It allows you to monitor both yours and your client’s Relativity data usage and ensure you are billing each client properly. You can generate detailed and easy-to-read PDF or Excel reports with calculated costs from pre-set pricing metrics and custom rates including Case Rollup, Case Flow, Users, Analytics, Processing, Indexes, Custom Tasks. MaxBilling reduces the time and effort you spend on billing, while also minimizing the potential for errors.

- **MaxMessage** – a Relativity-based application that builds on the Message of the Day (MotD) feature to neatly enhance communications within Relativity by adding different message targets (an individual user, a group of users, on a workspace or and on a platform instance level), periods, attachments, and the long-awaited message acknowledgment history.

- **TSD Email Event Handler** - a Relativity-based application that gives users the ability to send automated email notifications that inform selected recipients of edits or changes made on a Relativity object.

**Services for Relativity**

- **Support and Maintenance for Relativity Apps**: An annual support and maintenance service, which ensures that your custom Relativity apps and workflows are compatible with the latest Relativity release, also helping you achieve an easy and smooth transition from Relativity on-premises to RelativityOne.

- **Automation Testing for Relativity Apps**: An automation testing service, which provides accelerated results including the highest possible rates of quality and functionality of your custom Relativity apps, helping you to generate considerable time and effort savings.

- **TSD Development Training for Relativity**: A five-day course, covering the fundamentals of Relativity Custom Development. It teaches you how to rapidly create agents, event handlers, custom pages and much more with corresponding business logic.
8.1.106  Venio (US)

**Company Description**

Venio Systems is a team of customer-focused innovators and developers with 40+ years of experience providing eDiscovery solutions. All of Venio's founders work in the business, interacting with clients daily. Venio Systems was created 11 years ago to address the industry's lack of a unified eDiscovery solution — processing to production — done in a single platform. Venio Systems remains at the forefront of innovation by utilizing an agile approach to development with monthly updates and ongoing calls with its clients. This allows us to provide the most up-to-date, feature rich, and adaptable discovery platform available for today's global legal requirements. Based in the United States, Venio is currently used at top law firms, the largest government agencies in the US, and by tens of thousands of attorneys and solicitors through our partners in the US, Canada, UK/EU, and Asia. References are available by request.

**Vendor Offerings**

Our unified discovery software platform VenioOne consists of a desktop console, as well as web, mobile, and VenioOne OnDemand interfaces designed specifically for the different functions being performed. VenioOne manages the full EDRM lifecycle with processing, early case analysis, machine and active learning, analytics, review, and production. The addition of the VenioOne OnDemand interface to VenioOne enables Venio's capabilities in a fully automated, simplified, self-service platform to address more of today's day-to-day discovery needs, including collaboration.

Our software development is an agile process with a monthly release of updates, enhancements, and new features driven by the requests submitted by our clients and partners. 24/7 software support, maintenance, and training are included. Site consultation, custom development, training, and software certification are also available.

</tbody>
</table>

**Company Description**

Vound is a leading global vendor of technology used for end-to-end forensic search, eDiscovery and early case assessment. Our Intella® range of eDiscovery and digital investigation software is used by over 1500 organisations worldwide including the Big 4, Fortune 500 enterprises and Big Box Retailers, national security agencies, global banks, law firms, and law enforcement for Human Resources, Legal and Compliance matters.

Intella’s strength lies in taking large collections of data and allowing users to quickly search and drill down to the most pertinent evidence; minimising the need for experts and significantly cutting the time and costs organisations normally take to carry out investigations, audit requests and eDiscovery.

Intella enables even the novice user to quickly find evidence and make an informed decision on their data, and is, therefore, widely recognised as one of the most intuitive and easy to use Early Case Assessment and e-discovery solutions on the market--without the complexity or costs associated with similar products.

For more information, visit [www.vound-software.com](http://www.vound-software.com).

**Vendor Offerings**

Intella® Product Family

Find your evidence fast.

Intella delivers powerful process, search and analysis capabilities in an easy-to-use platform for single-user investigations through to multiple-reviewer teams. Intella products are priced starting from Intella 10 for single users/ up to 10 GB, for less than $1,000.

**Intella’s key features** are designed to help reviewers and investigators get the job done quickly, simply and cost-effectively. Whether you are a seasoned litigation support professional or lawyer in a small firm, Intella range of products are suited to your needs.

- Market-leading indexing speeds for faster evidence processing
- Enhanced search and analysis capabilities of mobile data collections, forensic images, email, attachments and embedded objects, archives, headers, and metadata
- Load file support for all major legal export formats, to include ingestion of existing load file productions
- Task and export wizards to create and implement repeatable, template-driven processing steps
- Additional file level support for indexing native EnCase images, DD, L01, MacOS, GPT and ISO
- Multiple analytic visualizations, including Intella’s unique cluster maps and Insight analysis

8.1.111  Yerra Solutions (Elevate) (Switzerland) (Updated 2019)

Freie Strasse 11, CH-4051, Basel, Switzerland  
www.yerrasolutions.com

**Company Description**

Yerra Solutions is headquartered in Basel, Switzerland and has offices in the UK, US, Singapore, Hong Kong and Poland. The company was founded in 2013 and was acquired by Elevate Services in 2019. Yerra provides consulting and technology-enabled managed services for legal & IP, eDiscovery & investigations and compliance with a focus on large, international organisations in highly-regulated industries. Joining Elevate, a leading law company with over 1,200 employees, expands Yerra’s ability to scale globally and meet the needs of these complex clients.

Yerra partners with clients to help them bring eDiscovery in-house, implement technology and streamline processes. Expert consultants help clients define and accomplish a target operating model and managed services teams, that are fully embedded into client operations, execute on every phase of the EDRM. Yerra is especially qualified in the complexities around cross-border data privacy issues and has in-country resources in the most stringent jurisdictions like Switzerland and Singapore. Yerra is also uniquely qualified to handle sensitive eDiscovery issues for financial institutions and does so for some of the largest banks in the world.

**Vendor Offerings**

**eDisclosure/eDiscovery Consulting**

- **Litigation/Investigation Readiness Assessments** – Our experts will evaluate current systems and processes, identify gaps and make recommendations on how to best prepare an organisation for inevitable discovery requests due to litigation or regulatory investigation.

- **Early Case Assessment** – Leveraging years of experience, Yerra consultants evaluate a request to produce Electronically Stored Information (ESI) and offer an estimate of the cost and time it will take to fulfil the request. This helps minimise exposure to risk and aids in a decision about settlement.

- **Reporting and Analysis** – With eDisclosure representing a large and ever-growing percentage of legal spend, Yerra offers services to identify costs and provide expert analysis of how to handle future cases more efficiently.

**eDisclosure/eDiscovery Managed Services**

- **Case Management** – Yerra team members are experienced in project managing cases from start to finish. Working in tandem with the client’s legal, IT and discovery teams, we handle every request for information to ensure the timely delivery of defensible results.

- **Preservation and Collection** – Yerra employs forensic and eDisclosure specialists on behalf of our clients who are uniquely skilled in handling the preservation and collection of data from sources spread around the world. We focus on high-quality chain-of-custody and process documentation to manage the risk involved in moving data across borders.

- **Review and Redaction** – Yerra employs legal professionals on behalf of our clients that represent various level of experience. These teams review documents pertaining to all types of matters, from the mundane to highly-
sensitive “bet the company” litigation and investigations. We adhere to strict confidentiality and quality control protocols to produce quality work efficiently and defensibly.
### 8.1.112 ZyLAB UK Ltd (Dutch) (Last updated in 2019)

</table>

Laarderhoogtweg 25, 1101EB Amsterdam

www.zylab.com

### Company Description

ZyLAB is an innovative and strategic leader in eDiscovery technologies. Over the past 35 years, ZyLAB has been working closely with law firms, corporations and governments to deal with eDiscovery, answering regulatory requests, internal investigations, audits and handling public records requests.

The ZyLAB software is developed to meet the specific requirements for such applications, and is available in on-premises, SaaS and Azure deployments.

To learn more, please visit www.zylab.com.

Gartner recognizes ZyLAB as “leader” in the latest Magic Quadrant for eDiscovery Software and ranks ZyLAB #1 for complete EDRM eDiscovery in its most recent “Critical Capabilities for E-Discovery Software” report. On Gartner’s review platform Peer Insights, users rate ZyLAB software with five stars out of five.

For more information, visit: www.zylab.com

### Vendor Offerings

**ZyLAB ONE eDiscovery**

ZyLAB ONE eDiscovery uses Artificial Intelligence and Data Science to limit the disruptive effect and costs of litigation, arbitration and regulatory information requests related to anti-trust, competition, fraud, bribery, financial-, environmental-, healthcare- and export violations and the subsequent internal investigations or damage claims.

- ZyLAB’s Direct Collecting makes tremendous time savings to get data ready for early case assessment and (first) pass review. Direct Collection drastically reduces the cost and risks of downloading / uploading data or the shipping around of tapes and hard disks.
- ZyLAB’s Deep Processing allows you to automatically reduce your data volumes before you send them on for review, without getting in trouble or being accused of data spoliation.
- Using ZyLAB’s Review Accelerators you can minimize the most expensive and time consuming part of the eDiscovery process.
- Litigants use ZyLAB’s Early Case Assessment to quickly understand the facts and merits of a case, identify key custodians and recognize critical information so they can develop an effective and realistic litigation strategy.

**ZyLAB eDiscovery as a Service**

For a predictable monthly subscription fee, ZyLAB ONE eDiscovery as a Service provides you with the infrastructure to host and manage your cases, providing you on-demand access to your information as well as tools to collect, upload, process, perform early case assessments, analytics, TAR, review, redact, and produce documents in native TIFF or PDF formats.
ZyLAB ONE eDiscovery is a great way to experience our technology, perform a proof-of-concept for a full-scale deployment, or manage a smaller or ad-hoc eDiscovery case. ZyLAB offers three levels of services:

- eDiscovery as a Service in a managed services model.
- eDiscovery as a Service, '24/7 ready DIY'
- eDiscovery as a Service within your Microsoft Azure.

**BENEFITS**

- You can start immediately, no need to install on-premises software or hardware.
- Lower starting costs and low (case-based) monthly bills instead of large capital investments.
- Scale as you need and as you go.
- Always the latest releases and the most advanced technology available.
- Easy to use and deploy in-house and with 3rd party service providers.
- The best professional services available for additional customizations and assistance.

**Company Description**

**MAKING LAWYERS’ LIVES EASIER THROUGH THE SMARTER USE OF TECHNOLOGY**

That’s what excites us and why we get out of bed in the morning.

As former lawyers, paralegals and IT professionals within major law firms we know what lawyers do well. It also puts us in a unique position to understand the problems that face lawyers daily, with technical expertise to overcome those issues.

We know that lawyers are great at ‘the lawyer-y bit’ and we believe that lawyers should be freed from administrative tasks that stop them from doing what they are good at.

In our experience many of these tasks can be simplified using technology, and that’s what we have been doing for over 15 years; writing software that gives lawyers more time to do the stuff they spent years training for.

**Vendor Offerings**

- Electronic document (Court) bundling software with integrations into many case/document management systems
- Electronic signature integrations for iManage, SolCase & Visualfiles
- Many integrations for Visualfiles including MoJ portal, HM Land Registry, Smartsearch, PayPal and more
- SolCase and Visualfiles development and optimisation
8.2 Software

This Section details the software used by various companies. As there are firms that use third party products, at the end of each section is a box showing which company owns/supplies the product and a second line show which firms use the software as part of their offering to the marketplace.

<table>

8.2.1 **AccessData Software Suite**

**FTK**: Zero in on relevant evidence quickly, conduct faster searches and dramatically increase analysis speed with FTK®, the purpose-built solution that interoperates with mobile device and e-discovery technology. Powerful and proven, FTK processes and indexes data upfront, eliminating wasted time waiting for searches to execute. No matter how many different data sources you’re dealing with or the amount of data you have to cull through, FTK gets you there quicker and better than anything else.

**AD Lab**: Divide and conquer with AD Lab. This proven tool helps you power through massive data sets, handle various data types and run multiple cases at the same time, all within a collaborative, scalable environment. AD Lab uniquely enables distributed processing, allowing investigators to utilize additional hardware to dramatically increase their case processing and resolution speed.

**Quin-C**: This pioneering software solution from AccessData is changing the way digital investigations happen, empowering investigators, legal teams and forensics labs of all sizes with ground-breaking tools and transforming their work environments. Quin-C speeds data access, processing and analysis, and offers a highly customizable, widget-based User Interface for more accurate, advanced investigations in less time. It’s simple, visual and powerful, with flexible out-of-the-box configurations to fit the unique needs and challenges of any type of investigation or case work. Quin-C integrates seamlessly with all other AccessData products or is available as a stand-alone.

**AD eDiscovery**: A single, fully integrated platform for forensically sound preservation/litigation hold, search, collection, processing, data assessment and complete legal review, AD eDiscovery gives teams a repeatable, defensible process for managing e-discovery that will hold up in court.

**Summation**: Summation® is the only all-inclusive, web-based legal review platform that provides teams with a single tool for managing all post-collection stages of e-discovery. Powered by trusted FTK® processing technology, Summation combines processing, review and case organization into a single product for the most cost-effective, accelerated e-discovery possible. And because Summation utilizes a single shared, forensically secure backend database, data never has to move throughout the e-discovery process, reducing risk of data loss and spoliation.

**AD Enterprise**: Today’s digital forensics teams face many challenges in a world filled with an overwhelming amount of data. From multiple office locations, to massive employee pools and remote workers, AD Enterprise provides deep visibility into data to investigate employee wrongdoing and to facilitate regulatory and legal requirements so you can respond quickly, remotely and covertly while maintaining chain of custody. Whether investigating personnel, fact checking a whistleblower’s claims, or investigating government inquiries, AD Enterprise facilitates focused forensic investigation and post-breach analysis, without interruption to business operations.

8.2.2  Anexsys Entity Review Software

**Entity**

Entity is a cloud native document review platform created by Anexsys. It simplifies document review exercises for lawyers by providing an intuitive experience, designed to help lawyers undertake large scale review exercises with ease.

Entity’s user interface has been designed with simplicity in mind, stripping away as much complexity as possible, resulting in an experience where lawyers can jump right into the product with no training.

**Intuitive Review**

Our viewer technology supports a range of annotations, from page level notation, cross references and bookmarks, to highlights and hand written notes (when using a touch screen or tablet). Redactions can be applied right within the viewer without the need to convert to an intermediary format. Entity’s approach is to make the documents being reviewed as accessible to the user as possible, enabling individuals and review teams to work individually and collaboratively.
Simple Search

Navigating documents within Entity is made easy via simplified search functionality. Entity offers standard keyword searching, along with additional options such as faceted search, phrase search and more. Entity is suitable for all types of document review projects including data subject access requests and investigations.

Overcome Challenging Datasets

Entity contains a range of cloud native and custom built document solutions such as machine translation, audio transcription, detection of personal information and automated redactions. These solutions can be provided as a service, whereby Anexsys will carry out translations, redactions or transcriptions on a client’s behalf within Entity and return the finished product to them.

Entity has been built for extensibility, enabling our clients to benefit from the immense research and development efforts of the major technology and cloud providers. We can plumb in Google Cloud’s handwriting recognition, Microsoft’s AI, and more, all available without upfront fees or commitments.
**Evaluate Entities**

Entity is built on graph database technology which enables the identification of complex relationships in unstructured data. Users can highlight key players, organisations and personally identifiable information within documents, enabling early assessment of data and focussed interrogation of data.
**The Technology**

Entity uses AWS infrastructure to provide on-demand scale. Entity can spin up a near infinite number of processing tasks in a matter of seconds, to support optical character recognition, document conversion, text extraction and more. We only pay for these resources whilst they are active, meaning we can pass the cost savings and efficiency benefits on to our customers.

The Entity tech stack utilises Graph and NoSQL database technologies, designed specifically to provide high performance at scale, and suited to hosting the largest unstructured datasets.

8.2.3 Anexsys Review Tool Kit (RTK) Suite

RTK.ExcelRedact

RTK.ExcelRedact takes Excel documents of any shape and size and renders them in an interactive webpage within Relativity, allowing users to make redactions quickly and easily without missing important data. Imaging Excel spreadsheets for redactions can result in unexpected pagination and formatting, and often removes plenty of the useful content present in an Excel workbook; redacting Excels offline makes it easy to miss hidden data that should be considered for redaction. This application allows users to consider and redact all data in an Excel document, including non-cellular data such as macros, named ranges, and more. RTK.ExcelRedact is provided as a Relativity Application in a RAP file and can be installed directly through the front end of Relativity.

RTK.Loadfile

RTK.Loadfile was designed by the consultants at Anexsys to solve everyday challenges encountered when dealing with document loadfiles. RTK.Loadfile automates common loadfile tasks including comparison of a loadfile against a Relativity workspace and splitting loadfiles for faster ingestion, or for complying with requirements of a production or disclosure specification.
RTK.Message

Standard exports from social media and messaging applications are often in a format including XML formats. There’s also often lots of ‘noise’ such as entries and exits in a Bloomberg chat room, as well as irrelevant data such as data outside the relevant date range from a social media profile export.

RTK.Message has a built-in processing engine which supports a variety of message formats and Anexsys have created a message parser framework which allows new sources, for which a parser doesn’t already exist, to be rapidly created.

RTK.Message populates a staging area for messages, which harnesses the power of the Relativity UI. By using widgets and dashboards, reviewers and administrators can quickly filter the message data to remove irrelevant content, and promote potentially relevant data to the main document review.

During the publishing stage, RTK.Message can create one document per message, or per conversation, but can also consolidate messages into groups such as a daily, weekly, or monthly digest of messages. The output is a modern, easy-to-review HTML document.
DocumentFolio

DocumentFolio quickly collates documents into a searchable, elegant, branded application enabling end-users to view, search and print electronic documents. DocumentFolio offers complete versatility to create electronic bibles (eBibles), transaction volumes, bid submissions and more, via an easy to use desktop application. With the ability to customise the interface to match your requirements and brand, DocumentFolio delivers electronic content to users securely and conveniently. eBibles can be created from a standard legal index, leaving little requirement for time-consuming and often inaccurate data entry. Developed in-house by Anexsys' software developers in collaboration with a leading international law firm, DocumentFolio is a next generation eBible solution.

Security Features

Stroz Friedberg’s Managed Services & Litigation Repository employs a robust security architecture which includes the following:

- Full law enforcement-level chain of custody on all devices and data
- Data stored with SSAE16: SOC1/SOC2, ISO/IEC 27001:2005, ISO 22301, and/or FINMA certification(s).
- Internal information security protocols
- Regular security assessments under HIPAA, PCI DSS standards, and/or NIST 800-53.
- Security certifications:
  - Security Essentials Plus Certification (UK)
  - Subject matter experts with CISSP, CIPP, CEH, GIAC, GPEN, and CISM

8.2.5 ayfie Software Suite

ayfie Inspector for Relativity®

ayfie Inspector dramatically enhances productivity in the leading eDiscovery platform, Relativity®. Some of its core features are:

- **Entity Extraction**: ayfie's linguistic approach does not rely on frequency, it can be even applied to smaller collections of data and short messages to better explore the data without the guesswork.

- **Emoji Extraction**: Both Unicode [Grin] and ASCII [:] types of emojis are supported and can be used as filters by including and or excluding them from a search.

- **eMail Threading**: ayfie's brand-new email threading mechanism ensures flexible ways of navigating potentially compromising conversations in order to uncover hot documents faster and more efficiently. It reconstructs the threading structure of millions upon millions of emails even if some metadata might be missing.

- **Highly scalable and extensible**: The ayfie core is built on a highly scalable and highly extensible engine to analyze petabytes of information related to compliance, investigation, litigation or knowledge discovery quickly and easily.

- **eDiscovery application**: ayfie Inspector can be used as soon as text and metadata are available. It dramatically reduces the number of hosted native files that need to be reviewed after analysis.

- **Find even hidden PII**: ayfie Inspector can handle all types of data and variations of PII within data. It provides a unique approach to finding hidden personally identifiable information in your data to enable investigations even at the largest corporations and service providers.
8.2.6 Bundledocs

Bundledocs Electronic Document Bundling Software:

Bundledocs is the ultimate document bundling software and provides law firms and legal departments with everything they need to get the job done.

Effortlessly prepare quality professional briefs, reports, eBooks or document bundles in minutes. Simply take a load of documents from your folder, Case or Document Management System. Bundledocs organises them into a neat, numbered, sectioned bundle in minutes – ready to save, share or print. No matter how big or small, you can change in seconds. Simple, easy to use, time saving and massively efficient.

With powerful technology underlying our functionality, Bundledocs helps alleviate common pain points such as:

- Production of Large Bundle
- Table of Content Creation
- Pagination and Late Inserts
- Document Manipulation
- Secure Sharing and Collaboration
- OCR
- Redaction and Annotations

Our cloud first technology provides users with a secure, stable platform for the creation of any size bundle – large or small. Our unique approach means that resources are added when needed meaning you don't have to worry about slow PC's, systems stalling and crashing or the file sharing limitations of your email.

Collaborative working is easily accommodated so you can work with colleagues in different offices, securely share bundles of any size with clients, or even collaborate with any third party. You even have the ability to make annotations public or private which is ideal when working with others.

Bundledocs has an open API allowing us to seamlessly integrate with your system. We already integrate with leading systems including: iManage, NetDocuments, Tikit TFB, Timeslice, Actionstep, Worldox etc.
Chapter 8 – Supplier & Software Details

The best bit? Bundledocs is software you’ll love using. It’s incredibly simple and easy to use. No need for long laborious training sessions. No need to wait for install and setups. Just pick it up and go!

8.2.7 Canopy Software

Canopy is a cloud-based application deployed on AWS that streamlines data breach response in 3 core ways:

- **Assess privacy impact in 24-72 hours**: Canopy’s patent pending PII detection technology eliminates the 1-2 weeks previously devoted to the manual assessment phase. Canopy’s automated impact assessment guides the notification strategy, defines the scope, and helps develop accurate project estimates.

- **Reduce false positives by more than 43%**: Canopy’s sophisticated algorithms reduce the quantity of documents that are unnecessarily promoted for manual review by 43+% compared to traditional processes—saving organizations significant time, money and resources.

- **Accelerate breach review by over 25%**: Canopy’s automatic entity resolution and reconciliation, coupled with perpetual machine learning improvements in the background, enable breach response teams to complete the project significantly faster and achieve regulatory benchmarks.

Canopy achieves these improvements via 4 primary components of the software:

1. **Processing and Impact Assessment** - Carefully calibrated AI-powered PII/PHI detection quickly reveals the composition of the breached data population.
   (a) Process the entire breached dataset to automatically sort, group and quantify all the file types that are recognized by Canopy software.
   (b) Recognize the presence of 60 foreign languages, enabling reviewers to prioritize their response strategy based on foreign laws and timelines.
   (c) Detect and classify Social Security numbers, credit card numbers, ID numbers, medical record information and hundreds of other datatypes recognized by Canopy software.

2. **Data Mining and Extraction** - Sophisticated data mining techniques identify precisely where sensitive information is located in the data.
   (a) Anomaly Detection - Canopy includes AI-based detection of data anomalies, such as typos in Social Security numbers and transposed characters.
   (b) Image Classification - Canopy distinguishes between documents containing sensitive information like driver’s licenses or birth certificates and documents containing logos or advertising banners.
   (c) Image Gallery - Canopy aggregates all of the image files that are present across all documents, enabling users to bulk-tag and classify images as junk or important for review.

3. **Entity Resolution and Reconciliation** - Leading-edge tools to aggregate fragmented PII/PHI and build deduped profiles of the actual people involved.
(a) Automatic Entity Deduplication - With the help of machine learning, Canopy merges related entities into a single profile that logs all variations, such as maiden names and nicknames.

(b) MapAccel - Map spreadsheet columns to entities and import entities while reviewing documents.

(c) Profile Builder - Rather than manual data entry of new information, reviewers click on PII in a document and instantly add it to the affected individual's profile in the system.

(d) Entity360 - Canopy aggregates every piece of PII that has been discovered for an individual during the project and displays the source documents side-by-side.

(e) Active Lookahead - Canopy actively associates individuals with documents as the system learns more about how they are related.

4. Export of Notification List - Advanced machine learning continually refreshes the results in real-time, enabling the notification list to be complete as soon as QA concludes.

8.2.8 CaseLines (from Netmaster Solutions)

CaseLines is the market leading service for the preparation of legal bundles and electronic presentation in the courtroom. Our systems hold over 400,000 cases, with over 150 million pages of evidence held securely in the cloud. Compared with CMS bundling tools, CaseLines is less complex to implement and manage, is preferred by Counsel, court staff and judges, and delivers increased savings.

The secure web-based service allows legal teams to collaborate on any legal content, giving you access to a secure shared workspace, without the hassle or cost of setting up a separate data room which can be accessed from anywhere in the world. It saves the trouble and cost of regularly re-issuing pdf bundles every time the contents change or re-printing hard copy sets. Key features include:

- Hosting of trial bundles and evidence documents with remote online access
- Automatic indexing and hyperlinking
- Dynamic hyperlinking of opening/closing submissions to bundle documents, or from witness statements to exhibits
- Review evidence side by side
- Notes 'stick' to the correct page in the bundle even when pages are added or moved around. Notes can be private or shared within the trial team
- One-click streaming of audio and video evidence or recordings of the hearing
- Instant on-demand virtual hearings and video conferencing, with the ability to store a recording in the bundle
- Produce multiple sub bundles for specific users or hearings
- Automatic duplicate detection using AI fuzzy matching
- Search and redact

API's are available for integration to case management systems to facilitate easy loading of evidence bundles, and also to court management systems which allows a CaseLines evidence bundle to be generated automatically whenever an application is made through the court eFiling systems.
Figure 1 CaseLines allows users to review evidence side by side. Users can easily navigate the bundle index that automatically updates when new documentation is added. In addition, users can annotate evidence, adding notes with the ability to copy text.

Figure 2 CaseLines allows users to search the full bundle and then redact the search results. These redactions can then be categorised, for example ‘Witness One’ or ‘Address’. This helps to speed up discovery as users can easily redact and add meaning to these redactions.
Figure 3 Users can upload multimedia evidence to the bundle, with time stamps to mark up evidence for review or display during hearings.

8.2.9 **Case Logistix**

Case Logistix is a robust document-review and production platform offering you a quick, simple, and accurate way to review electronically stored information (ESI) and traditional “paper” throughout the discovery process.

Case Logistix makes it easy to meet the challenges of eDiscovery.

- **Intuitive Design**: Case Logistix looks and feels like other common office tools.
- **Native Review**: Case Logistix lets you review documents in native formats, maintaining key formatting and metadata.
- **Flexibility**: You can customize Case Logistix to meet the need of the case — rather than forcing the case to adjust to the application.
- **Scalability**: Built on a Microsoft® SQL database foundation, Case Logistix can scale from single-server/desktop configurations to robust multi-server solutions storing many millions of documents.
- **Security**: Control security at folder, document, data, and functional levels, ensuring that users see only what they need to see and do only what they need to do.
- **Global Capabilities**: Case Logistix is Unicode-capable, allowing you to find and review foreign language documents and localize to particular languages.

8.2.10 CasePoint

Casepoint’s flagship technology offering is Casepoint eDiscovery as a SaaS, on-premise, and hybrid-mode model. Casepoint eDiscovery is a full-spectrum eDiscovery solution that features state-of-the-art tools including:

- **Cloud Collections** - Casepoint can directly collect cloud-based data with its revolutionary, disruption-free process.
- **Data Processing** - Casepoint has a powerful built-in data processing engine that can process over 600+ file types. Clients can upload and process their own data using our web interface and desktop tool.
- **ECA / Culling** - Casepoint offers a wide variety of culling tools. In addition to deduplication and DeNISTing, timeline and advanced filtering, Casepoint makes our full range of analytics and AI-based tools available to support client’s culling needs.
- **Review & Advanced Analytics** – Casepoint is a full-strength review platform that offers a robust set of review, redaction, tagging, advanced search, and data visualization and analytics tools. Advanced analytics are woven into the fabric of Casepoint, and collectively they are grouped under the name CaseAssist. The features of CaseAssist include three main sets: Data Story Builder, CaseAssist Active Learning (CAL), and Iterative TAR.
- **Artificial Intelligence** – Casepoint offers built-in artificial intelligence and analytics that are the most robust in the industry, with advanced tools for TAR workflows.
  - Casepoint offers a first of its kind, artificial intelligence based, automated case evaluation system called CaseAssist. CaseAssist proactively identifies and alerts case teams of potential hot documents, helpful search terms, important dates, and likely “junk” documents. Instead of laboriously running complex search terms or reviewing predefined batches of documents, CaseAssist begins presenting potentially relevant documents to attorneys and investigators when they log into Casepoint on the fly.
- **Productions** - Casepoint offers highly customizable production features and functions built directly into the platform allowing detailed level specifications and features.
- **Organization and User Management** - robust organization, user, and administrative management features and functions to manage eDiscovery across the enterprise.

With Casepoint eDiscovery, legal teams can complete discovery projects faster, at a lower cost, and with greater accuracy using a single, integrated, easy-to-use tool. All customers get the complete package – there are no features to turn on or pay for later and no user fees.

Casepoint Platform is an innovative technology platform that law firms and legal departments can use to integrate a full range of enterprise applications, documents, legal data, and workflows, into a single flexible platform.

**Casepoint Security**

Casepoint security is focused on data security, integrity, and reliability at the company, datacenter, and application/database level. At the company level, Casepoint maintains the following:

- SOC 1 Type II Attestation (SSAE 18)
- SOC 2 Type II Attestation
Chapter 8 – Supplier & Software Details

- ISO 9001:2015 Certification (Quality Management Systems)
- FedRAMP In Process Designation

At the datacenter level, Casepoint has chosen facilities that meet the highest security requirements and credentials. Data centers are fully replicated for business continuity. Casepoint’s private cloud environment resides in secure data centers that have achieved:

- SOC 1 Type II Attestation
- SOC 2 Type II Attestation
- ISO 27001:2013 Certification
- Energy Star and LEED Certification
- PCI DSS Certification
- HIPAA Compliance

At the application and database level, Casepoint utilizes role-based security. Casepoint uses top quality encryption utilizing AES 256 bit encryption. Data is encrypted both in transit and at rest.

8.2.11 Catalyst

Powerful Search
Insight provides the most powerful field and text search in the market. It is lightning fast, even for complex field and text searches against tens or hundreds of millions of documents. (We’ve tested searches involving over a million characters.) But Insight search goes well beyond Boolean constructs.

Use Faceted Search to analyze field values as you drill into your results. Or Tracked Search to analyze key words in anticipation of a Meet and Confer. Or PowerSearch to run a thousand searches with the click of a mouse.

Visual Analytics
Not only did we improve the standard results page with flexible columns, previews and the ability to stack three fields in a column, but we also provided visual insights into your data.

Change to a chart view against any of your fields or several at the same time. Switch to a timeline view and drill into the dates. Track email communications between one and many or focus on two key witnesses with email and a timeline view.

Review Workflow
Organize review teams and carry out review easily and efficiently with Catalyst’s unique review workflow module. Set up review stages to fit your plan, dragging them where you want them. Set up users and workflow rules to determine where the documents go next.

Let the reviewers have at it. They get documents dynamically, as they need them. You follow their progress through the review dashboard or create reports to track progress, productivity and tagging patterns.

Paging and Highlights
For review teams, the key metric is documents per hour. We designed Insight to provide the fastest paging in the industry, even with large text files and thousands of highlights. You click Save & Next, and your next document is instantly before you, no matter how big it is. We’ve used every trick in the programmer’s book to improve productivity.

Unlike most other products, we don’t limit the number of highlights you can show. Insight can display hundreds of thousands of highlights on massive text files in seconds. No more compromising on your review because of product limitations.

Processing and Productions
Rather than wait for your vendor to act, take control of the process yourself. Insight is automated from processing and loading right on through to production. Do it yourself at any time, nights, weekends or holidays.

Unlike most vendors, we’ve spent years developing a fully automated system. Load data through your custom, secure FTP site and watch as Insight automatically picks up the delivery and processes it according to your specifications. Since 2008, we have run more than 125,000 automated loads and produced hundreds of millions of documents.

User Control
Although we host Insight securely in our private data centers, you can run it just like a local appliance. Set up a new site based on an existing model, manage users, set up new fields, choose redaction labels, folder structures, search fields, lookups and much more.

Give different rights to different user groups, from outside reviewers, to your internal team and even outside experts. The system supports private fields, folders, and searches so you can use it with joint defence groups or even opposing parties.

Commercial in Confidence
8.2.12 CDS Convert

Just as chat applications are pervasive in daily life, they are becoming increasingly prevalent in business, with more than 500,000 organisations using platforms like Slack and Microsoft Teams. As more workforces collaborate via digital platforms, the data generated is becoming more common in document review cases. Handling this data effectively is key to today’s eDiscovery.

Until recently, dealing with Chat and Mobile data was a laborious task, resulting in numerous solutions, formats and workflows with little to no consistency between data types. This often resulted in data being reviewed in Excel files outside of a review platform. That was until the release of the Relativity Short Message Format (RSMF). The release of RSMF has allowed the eDiscovery industry to improve and standardise their approach to short message data using a format which allows quick, easy review within Relativity 10 or higher. The structure of the data is simple for reviewers to digest and allows highlighting, redaction and discovery following the same review workflows as used with standard data types.

CDS Convert acts as a conduit between structured data exports and forensic collections, providing conversion to RSMF files for native processing within Relativity. During conversion, metadata and text is extracted, avatars are assigned to users, attachments and gifs are pulled down from cloud storage and embedded inline within the message. Conversations are threaded together creating one standardised format for each data type.

8.2.13 CloudNine

CloudNine provides four software offerings for clients:

1. CloudNine eDiscovery Platform
2. Preservation and Collection from CloudNine
3. Legal Hold Notifications from CloudNine
4. Outpost for Relativity from CloudNine

**CloudNine eDiscovery Platform**

**What is the CloudNine eDiscovery Platform?**

The CloudNine eDiscovery Platform (CloudNine), the company’s proprietary eDiscovery automation software, is a secure, web-accessible, SaaS-delivered offering that allows clients to immediately upload, review, and produce electronic documents for litigation, investigations, and audits. Built with speed, simplicity, and security in mind, CloudNine users experience the benefits of:

- **Speed:** With an all-in-one eDiscovery platform users can load data, start reviewing, and produce in less than 5 minutes.
- **Simplicity:** CloudNine was built to be intuitive enough for the non-technical user but have all the functionality power users crave.
- **Security:** Housed in our own protected cloud. We use a TIA-Tier 4 data facility to ensure that data never leaves our hands.

**How do customers use CloudNine?**

CloudNine allows users to start their electronic discovery with three easy steps:

1. Users Upload data to CloudNine’s private network for automated processing.

CloudNine allows users do-it-yourself uploading of data to our secure online repository while automatically converting documents to a usable format for review. We offer cost effective cloud-based eDiscovery software to process and review large volumes of data, reducing the expense of traditional processing, loading, and hosting.

2. Automated processing “automatically” converts documents for review.

CloudNine is an intuitive platform with multiple viewing options, giving users the ability to review their way. Create review sets for multiple reviewers. Add users and data fields as needed. Set user rights to control access to functions, fields, and documents. With a comprehensive search engine, users can even get highlighting images.

3. Users begin searching and filtering documents in minutes and produce with flexibility.

CloudNine makes producing responsive data easy, generates production and privilege logs, and eliminates the need for additional processing after export. Image, native and text files can be exported, with the images Bates numbered, custom-branded, and converted to single or multi-page TIFF or PDF with a load file.

- One real-world example of this process in action is as follows:

- Client registered online (with no contract) and began to upload data immediately.

- Client uploaded 27 GB of PST email files.

- CloudNine processed 300,000 documents (Emails and Attachments).

- CloudNine reduced document set by 61% with deduplication and irrelevant
domain filtering.

- Client with CloudNine accomplished these tasks within 24 hours of registering. Click here to learn more about CloudNine’s simplified eDiscovery automation.

Preservation and Collection

What is Preservation and Collection from CloudNine?

Delivered as an integrated and automated capability in CloudNine’s cloud-based, Software-as-a-Service eDiscovery automation software, Preservation and Collection from CloudNine improves collection workflow by efficiently and comprehensively accelerating legal and IT team ability to detect, identify, locate, and collect ESI in a targeted, comprehensive manner. And once collected through an automated ingestion process, ESI is automatically processed and prepared for analytics and review in support of litigation, investigations, or audits.

How do customers use Preservation and Collection from CloudNine?

Available at no incremental cost as part of the CloudNine eDiscovery Platform, the automated preservation and collection capability is accomplished through an eight-step, wizard-driven selection process that includes:

1. A secure login to the CloudNine eDiscovery Platform
2. The selection of the files and folders to be collected (scanning of local drives or specific folders)
3. The selection of a processing option (host with CloudNine, host with Relativity, build early data analysis report, or automatically create a load file for a third-party eDiscovery platform)
4. The selection of the project for the collected data to be added to (creation of a new project or loading into an existing project)
5. The selection of the time zone for the collection
6. The naming of the collection (custodian, location, etc.)
7. The secure upload of the collection (compression and uploading)
8. The upload confirmation for the completion of processing for analytics and review

Upon completion of the preservation and collection process, users are automatically and immediately ready to begin using the analytics and review capabilities as determined by their processing option selection (CloudNine, Relativity, or Load File for export to additional platforms).

To see a short technology snapshot of this offering in action, click here.

Legal Hold Notifications

What is Legal Hold Notifications from CloudNine?

Legal Hold Notifications from CloudNine empower legal and information professionals by enabling them to quickly and comprehensively develop, send, track, and manage legal hold notices to key custodians with the goal of protecting data integrity for potential or current investigations or litigation.

How do customers use Legal Hold Notifications from CloudNine?

With the defensibility and repeatability exemplified in all CloudNine eDiscovery automation technology, Legal Hold Notifications from CloudNine can be initiated quickly and directly from within CloudNine eDiscovery Platform and managed as part of a guided three step process. This three step process includes:

Step One: Understanding and Managing the Current Legal Hold Landscape
Step Two: Creating Legal Hold Notifications
Step Three: Confirming and Tracking Legal Hold Notifications
Outpost for Relativity

What is Outpost for Relativity from CloudNine?

Outpost for Relativity from CloudNine is CloudNine’s eDiscovery automation integration provides Relativity users with a tool that accelerates the upload, processing, and ingestion of electronically stored information (ESI). This complementary capability allows Relativity users to immediately ingest ESI directly from their desktops and automatically move ESI into Relativity.

How do customers use Outpost for Relativity from CloudNine?

Outpost allows users to automatically move data into existing Relativity platforms or helps users create a new Relativity environment with CloudNine’s hosted Relativity for Outpost. Outpost processing consists of more than thirty advanced processing tasks to ensure data is immediately actionable when automated loading into Relativity is completed. To use Outpost, clients first need to contact CloudNine for a demonstration/overview of Outpost. Upon completion of the demonstration/overview, clients will then have the opportunity to engage with CloudNine to gain access to an Outpost-enabled version of CloudNine.

Click here to learn more about Outpost for Relativity from CloudNine.
8.2.14 Concordance FYI

Concordance® e-discovery management software decreases the complexity of managing discovery and allows your team to search, review, organize, produce and share litigation documents - scanned paper, email and other e-discovery - generated during discovery.

8.2.15 Consilio Product Suite (Global RPM®)

Document Review in Global RPM® or Relativity®

Global RPM is a secure, web-based document review platform designed and built by Consilio’s in-house development team to meet the challenges of complex eDisclosure exercises. Global RPM is hosted in Consilio data centres across the globe to aid compliance with local data privacy restrictions.

The platform supports both small- and large-scale document review exercises and offers a range of features designed to simplify and speed up the review process, such as intuitive, customisable review interfaces and highly efficient workflow-management tools.

Users have the ability to perform simple or complex searches, create tags and folders, apply redactions and comments to documents, and select groups of documents for production. Global RPM allows searching and review of electronic documents in any language.

Using dynamic visuals such as dashboards, timelines and enhanced statistics, review managers can gauge resource requirements, monitor review progress, track reviewer productivity and adjust workflow to meet deadlines.

Consilio offers clients the option to host their matters in kCura's Relativity review platform. As an Orange Best in Service premium hosting partner, Consilio offers the full range of Relativity’s suite, including Relativity Analytics. The company has hosted hundreds of matters in Relativity and has over 75 worldwide Relativity Certified Administrators (RCSs), Relativity Review Specialists, Relativity Assisted Review and Analytics Specialists, relativity Experts and Relativity Infrastructure Specialists.

Recently joined with Huron Legal and Proven Legal Technologies, Consilio maintains multiple Best in Service Blue™ data centres in Europe. The combined, Consilio organisation has maintained Best in Service™ status in London every year that the accreditation has been available and longer than any other organisation outside of the United States.

Technology Assisted Review in Global RPM

Advanced analytical technology identifies and groups near-duplicate and conceptually similar documents as well as email threads; concept searching and clustering enable lawyers to prioritise documents for review more efficiently and deploy computer-assisted review techniques in appropriate cases.

Consilio offers clients a fully supported predictive coding solution as a cost- and time-efficient alternative to manual human review. The predictive coding technology, Backstop, allows for the creation and optimisation of multiple predictive coding models concurrently within the same review process. Each predictive model (tag specific) is independent of one another; thus each document will receive a probability score from each predictive model generated. The technology also handles sets of documents in multiple language without the need to create separate workflows. Consilio project managers support clients throughout each stage of the process ensuring that results are understood and optimised.

Enhanced Audio Review in Global RPM

Global RPM fully integrates Nexidia’s world-leading, patented phonetic-indexing and search technology to allow the searching and review of audio files such as telephone conversations in the same platform as the rest of the disclosure material. This streamlined one-system approach delivers dramatic improvements in accuracy and the opportunity for significant cost reduction.
Enhanced Chat Review in Global RPM

Consilio's Enhanced Chat solution is fully integrated into Global RPM and overcomes the challenges associated with chat reviews from Bloomberg and other platforms. In addition to keyword searching and date range filtering, the search engine allows for filtering and searching over chat specific fields which enables our clients to focus their review on specific chat participants, companies, participant count, and other fields of interest. Furthermore, dynamic filtering out of the chat “noise” of disclaimers, entry-exit and history events significantly improves the accuracy and efficiency of the review process.

8.2.16 Digital Reef (A TransPerfect Company)

TransPerfect's Digital Reef is the only processing and ECA platform that has proven it can process 17 TB in a single day. The processing engine scales across available servers and processing cores to support any size case and is not limited to single server scalability like other tools. Nearly all data types are supported, including mail archives such as Microsoft PST and OST, and Lotus Notes NSF files. In addition, forensic containers such as E01 and L01 files are automatically mounted, deNISTed and processed, without requiring that they are first flattened by hand.

On top of this powerful processing engine, our clients enjoy an intuitive yet powerful ECA interface that allows datasets to be culled quickly and easily. Each client has full access to their case data for Boolean searching, reporting, tagging, and advanced similarity analytics. Analytics offers “find more like this” searching, clustering, and near-duplicate analysis which is included in the ingestion rate. Email Threading is provided using both email metadata and content, depending on the quality of the data. OCR is also built-in so that image-only TIFFs, PDFs, and low content PDFs can be automatically scanned for textual content.

Digital Reef processing and ECA key features:

- Powerful multi-server grid architecture
- Processing tools for litigation support personnel
- Intuitive ECA interface for case team and attorneys
- Email threading viewable and exportable
- Clustering based on advanced similarity analytics
- De-duplication, de-NISTing and near-duplicate detection
- Multi-byte Unicode for support of all foreign languages
- All ECA work product (such as tagging) exportable to review
- Extensive reports, include search breakdowns and email histograms

8.2.17 DISCO Software

- DISCO delivers the fastest performance in the industry, with 1/10-second search and 1/3-second document viewing, even in databases with more than 100 million documents and even for the largest and most complex file types. Upload up to 4 TB of data per day using DISCO's proprietary high-speed uploader.

- DISCO’s cloud-native review platform automatically scales to handle matters of any size, with any number of users. DISCO releases new features and enhancements to all matters weekly using software-as-a-service (SaaS) delivery, requiring no upgrades or downtime – our clients have the latest and greatest software at all times.

- DISCO’s review platform includes all features for an end-to-end review, including Westlaw- and Lexis-style search syntax, an interactive search builder, clickable search examples, search history, saved searches, mass tagging and foldering, customizable folders for database organization, batch print to easily export documents for use in witness prep, redactions including mass redactions and redaction reasons, search term highlighting and persistent highlighting, the ability to add your own users with role-based permissions, customizable tags and tag groups, and automatic search result indexes.

- Full processing and analytics to identify duplicates and near duplicates, normalize time zones, extract all metadata, recreate email conversations and parent-child relationships, and OCR and image documents up front for faster performance during review – all at no additional cost.

- DISCO AI with Tag Prediction Technology. DISCO’s tag predictions powered by DISCO AI work within the flow of normal document review, and is enabled on matters at no cost. As you work, DISCO gives multiple coding recommendations for the document, predicting tags that are most likely relevant to the text. Furthermore, the software also scores tags that have been suggested or applied to the document on a -100 to 100 scale, showing predicted confidence and/or potential tagging errors.

DISCO’s advanced AI is designed to help attorneys throughout the course of discovery by applying continuous learning on multiple review decisions concurrently. There is no setup or seed set creation required — just start your review. When the system has developed enough insight, it intuitively begins to display those recommendations to you in real-time.

DISCO’s advanced AI gives precise predictions in a fraction of the time required for traditional review. As DISCO understands what is relevant to your review, it examines the document, taking into account the order, meaning of words, and sentence structure to arrive at intelligent insight as to whether the document is of substance to your review.
■ **Automated workflow** allows a case team to organize a large review into a series of review stages (for example, “first pass review” or “issue review”) with customizable tagging panels and rules. The case team can then see what each reviewer is working on, can control access within a stage at the group level, and can see progress at the group or batch level.

■ **Review metrics** provide transparency into overall review progress, including documents remaining, average pace for the review team and for individual reviewers, and an estimated completion date; help you identify problems early in the process, including reviewers who are outliers on specific review decisions or on their overall pace; and summarize what you are learning about the documents through your review.

■ **Quality control** lets you sample the review work product at any point to assess the quality of review decisions the team is making and to localize any problems by reviewer, custodian, document type, or other metadata field so that the problems can be corrected surgically without re-review.
Search Term Reporting. When negotiating search terms with the other side it can be difficult to know the scope or volume of documents (and their families) that any given search will return. Search term analysis resolves this issue by delivering a simple interface to cross-reference searches and see the result counts, family counts, and the unique counts of documents across terms. If you have received a set of search terms from the other side you can even drag and drop a .txt file containing terms straight into DISCO to save having to retype entries.

Native Excel Viewer. Speed up your review of excels! Now review your excels as you normally would in excel, search for hidden formulas and easily produce them natively as well.

Searchable audit histories for each document let you quickly find documents tagged by specific people between certain dates.

Case teams can use exhibit sets to collect documents for depositions, motions, or trial. DISCO automatically numbers and labels exhibits, allows you
Chapter 8 – Supplier & Software Details

to add titles and descriptions for cover sheets, include or exclude attachments, and output collated exhibits with an automatically generated index of exhibits ready for printing or efiling.

Millnet’s solution for batch printing, DocBuster® is powerful, fast and user friendly, taking the headache out of printing electronic documents. Developed in response to commercial law firms’ requirements and implemented in many of the leading law firms, DocBuster® is the definitive batch printing solution.

DocBuster is an integral part of Millnet’s 24/7 document operation, and is used by businesses across the UK. DocBuster makes it easy for law firms to batch print documents such as emails and their attachments, and common file types including Word, Excel and PDF. DocBuster is tried and tested technology, used within leading UK law firms. Millnet has printed in excess of 100 million pages of emails, MS Office documents (Word, Excel, PowerPoint), PDFs and other file types with the program over the past 10 years. DocBuster is easy to install, requiring little or no IT involvement.

**DocBuster is designed to be**
- Easy to Use
- Powerful
- Cost Effective

**Main Features**
- Page count reporting
- Identifies password protected and corrupted files
- Chronological ordering of emails
- Formatting of Excel spread sheets
- Page capping on large documents
- Detailed slip sheets, making it easier to identify a documents origin
- Plus many other features that will assist lawyers in their day-to-day work requirements
- UK based support, DocBuster is backed up by the largest outsourced secure 24/7 legal document production facility in the UK.

8.2.20 edt Toolbox

EDT Software is a cutting-edge legal software platform for eDisclosure, litigation and investigations.

EDT integrates eDisclosure activities end-to-end from processing to analysis, review, production and presentation in court. Finally, you have all the features you need to run your whole case end-to-end without any data movements, saving time and money and reducing complexity.

INGEST

Ingest large volumes of data. Fast.

- Hundreds of file types are supported including Lotus Notes, forensic images, EDB, PDF portfolios, etc.
- Import all kinds of load files, including Summation, Relativity, Concordance, Ringtail, Excel, CSV and more
- Analyze or review data during ingestion – no need to wait for processing to finish

Many ingestion tools at your disposal.

- Eliminate system files, duplicates, files outside relevant date ranges
- Use our integrated OCR to make scanned documents searchable
- Provide passwords for password-protected files
- Extract embedded files and maintain container relationships
- Select fields used for MD5# algorithm to detect duplicates
- Detect items that have been deleted from email boxes
- Geo-location metadata is extracted from JPG images (longitude, latitude and altitude)

Ingestion is made much easier:

- Quickly load data into multiple cases (or multiple datasets) concurrently
- Capture configuration options in templates to ensure easy re-use and consistency
- Automate data ingestion via a Command Line Interface

ANALYZE

Analyze data and check proportionality in your matter.

- Perform deep-dive iterative analysis and sampling using
  - ‘Find Similar’ near-dupe features
  - Concept clusters and keyword iterations
  - Correspondence analysis charts
  - Email threading
  - Domain analysis
  - Name normalization via our expanded Alias feature
- Automatic calculation of cost impact of document volumes based on proposed filters
• Ability to quickly cull or prioritize documents for review
• Take a quick peek at document contents during analysis
• Easy to detect and suppress irrelevant files (logos, signature files etc.)
• Detect languages using our state-of-the-art machine learning algorithm

REVIEW
Review & classify documents
• Easy to use review directly from your web browser
• EDT’s search interface is extremely intuitive and powerful
• No load file processing is required prior to review
• Global searching is available from the Case list page which allows users to perform a keyword search on the full text index across all cases they have permission to see

Market leading review tools include:
• Review and redact near-native files using our built-in HTML5 Viewer
• All files, even Excel, can be redacted without conversion to image format
• Customize screen layout and content to accommodate different users
• Full access to analytics for documents in review stage
• Change early culling filters with one-click demotion back to Analysis

PRODUCE
Produce document exports quickly - anytime during the case.
• Export documents in all standard load file formats (Relativity, Concordance, Ringtail, Summation, Excel, CSV, DOJ, SEC, CSV etc.)
• Full audit trail makes it easy to see produced versions and history for each document
• Flexible Bates numbering including the ability to assign new production numbers
• Create TIFF or PDF images in advance or on the fly
• Customize placeholders and slip-sheets for any file type
• Apply permanent redactions and remove underlying text at production time
• Concurrent, distributed processing for large productions and tight deadlines

PRESENT
Prepare for trial and present documents in court.
• Automatically update exhibit list during trial
• Create, merge, and split exhibits real-time, during the hearing
• Create custom fields to manage exhibits before and during trial
• Build chronologies and link documents to events
• Automatic hyperlinks to document references in transcript, submissions, and affidavits

8.2.21 **Enterprise Vault**

**Key Features**

- Unified Document Archiving Software Platform moves less-frequently accessed information off of expensive primary storage to lower-cost storage.
- E-Discovery and Search roles-based access for legal users to search, preserve, review and export electronically-stored information efficiently.
- Global de-duplication of Archived Content (i.e. email, files, SharePoint, IM, databases).
- Active Content Collection to extend search, indexing and classification of data beyond the archive.

**Key Benefits**

- Enterprise archiving reduces storage footprint and costs by up to 60% or more by moving de-duplication and compression closer to the source while retention and deletion policies keep information for only as long as it is needed.
- Streamlines backup and recovery times by moving older, infrequently accessed data from production sources into a centralised archive.
- Enables an in-depth search of Electronically-Stored Information (ESI) across the enterprise, giving organisations clear visibility into and control of the discovery, assessment, and management of unstructured and semi-structured information.
- Allows for immediate early case assessments, legal hold and review without manual, time-consuming collection processes.
- Quickly find all relevant information across email, SharePoint, files, IMs, etc., based on custodian and target searches to individual custodians within a case for increased search precision and recall.
- Extend compliance policies to sites such as Facebook, Twitter, and LinkedIn and preserve social media communications for eDiscovery requests.
- Extend governance to SharePoint. Archive SharePoint document libraries for storage optimisation and compliance. Archive SharePoint document libraries, wiki's custom SharePoint lists, social content and more.

8.2.22 **Enterprise Vault.cloud**

**Key Features**

- Cloud-based information archiving (no required hardware, software or client plug-ins).
- Intuitive end user experience with seamless archive access from Outlook, Outlook Web App, Notes or supported web browsers.
- Rapid search functionality and world-class collaborative eDiscovery workflow.
- Unlimited storage and retention for a predictable monthly fee.
- Support for Microsoft Exchange Server, Microsoft Office 365, IBM Lotus Domino, Microsoft SharePoint, SalesForce Chatter and Box.

**Key Benefits**

- Reduces the management burden for IT with rapid deployment and automatic upgrades and support.
- Expedite searches for archived information with scalable grid architecture and advanced, search-within-search capabilities that deliver results in seconds.
- Accelerate the legal discovery process by giving legal teams self-service access to the archive.
- Impose mailbox quotas without inhibiting user productivity by providing users with virtually unlimited mailboxes via their archives.
- Improve server performance and shrink backup and recovery times by storing information in the archive and confidently expiring messages saved on the mail server.
- Ensure email high availability with Enterprise Vault Mailbox Continuity.cloud, a failover system for your primary mail platform.

8.2.23 Epiq Software (DMX and TMX)

Epiq DMX (DocuMatrix) – Epiq’s eDiscovery business intelligence platform

Dashboard

With its focus on easy-to-use business intelligence, DMX provides data insights, while still providing the ability to process and review terabytes of data.

Offering end-to-end transparency throughout the eDiscovery process, DMX provides a holistic picture of data flow: from the original data sources to what’s been processed to what was ultimately reviewed and produced. And most importantly, how all this information is woven together seamlessly in an interactive and easy-to-use dashboard.

The DMX dashboard shows users:

- The stage in which the data resides
- Where each data source has been
- The data and custodians included in the current data set
- Data size and document count
- Current velocity of the review

With the DMX dashboard, data from previous projects can easily be referenced to inform decisions about future cases. The platform allows our clients to interact with the data and find information that never would have been revealed otherwise.

Review

The DMX platform equips our clients with essential discovery management tools to achieve an efficient, intelligent assessment and review with features such as:

- Advanced analytical features to triage data early in the discovery process and identify documents vital to the matter, leaving you with a smaller, more focused data set
- An automated workflow that reduces the risk of human error and keeps data and crucial steps from falling through the cracks
- Foreign language capabilities via fully-customizable workflows that support 195+ languages
- Secure multi-party project collaboration
- Review accelerators that can increase review speeds by up to three times, dramatically reducing document review costs

Processing

DMX delivers the most powerful data processing in the industry. Excavating deep into data files, DMX fully extracts metadata, text, embedded objects and domains, ensuring critical information is not missed. DMX is continually strengthened to handle a wide range of diverse data formats, including Lotus Notes, Bloomberg data, Unix Mail, chat, wikis, SharePoint, audio and video files, as well as emerging data types, such as social media.

Moreover, as DMX uses the native application interfaces, all data loaded remains in a native format that can be recognized and reviewed online instantly. This eliminates the need to adjust the data or any TIFF or PDF conversions.
Figure 1. DMX dashboard

**Epiq TMX – Collaborative platform for case preparation and presentation**

“TMX is a secure, flexible, and highly scalable sharing platform that gives our international clients the ability to build electronic bundles quickly and easily for court hearings and arbitrations, while giving our U.S.-based clients a single collaborative tool with which litigation teams can prepare case documents for depositions and trial,” said Cliff Dutton, chief innovation officer. “For legal professionals, TMX delivers an intuitive, adaptable platform that fully bridges the gap between document production and trial.”

TMX enables:

- Collaboration between legal teams, experts, and clients
- Bundle creation in a flexible, familiar, and intuitive platform including folder structuring, pagination, and index generation
- Easy-to-use functionality such as searching, annotation, tagging, hyperlinking, and the presentation of transcripts and documents
- Private and shared workspaces configurable to the demands of the parties and the case

TMX is available immediately in Europe, and will be available in North America, Asia, and Australia later this year. To find out more, click here.

8.2.24 Equivio Relevance

Equivio Relevance is a lawyer guided software tool for scoring documents by relevance. From a sample of documents that have been classified by a lawyer as ‘relevant’ or ‘not relevant’, the software generates relevance scores for all documents in a collection. Equivio Relevance can be used at various stages in the legal document review process to save time and cost including:

- Initial case assessment – to rapidly assess key issues
- Culling of irrelevant documents that are responsive to typical keyword / phrase search techniques.
- Prioritisation of review – start the document review with the most relevant documents
- Post-review quality assurance – to assist in identifying review inconsistencies.

How does the Service Work?

1. The documents to be ranked for relevance are selected. For instance, they may be documents identified via the application of searches / filtering by say custodians, date range, file type etc. Alternatively, they may be the documents as selected by the client or documents received on disclosure.

2. The collection of documents to be reviewed are firstly de-duplicated and text extracted from electronic documents such as Word, email, PowerPoint etc. and for hard copy or scanned files text is created via optical character recognition ‘OCR’.

3. The text from the files to be reviewed is loaded into the Equivio Relevance software. There is the option to ‘seed’ the review with sample relevant documents and / or keywords. Alternatively, the software will select a representative batch of 40 documents for the lawyer to review.

4. The software is simple to use and does not require any training (see screenshot below). All that is required is for the lawyer to read the text from each document and decide whether the document is ‘relevant’ or ‘not relevant’. Note that it is also possible to review documents by ‘issue’.
5. The software presents to the lawyer batches of 40 documents at a time. Upon completion of each batch of 40 documents the software takes between 2 and 5 minutes to assess the results and create another batch of 40 documents for review. In the background, the Relevance software is effectively ‘second guessing’ the lawyer’s classification of documents. The process typically requires between 30 and 45 batches of 40 documents each (i.e. 1,200 – 1,800 documents) to become ‘stable’ (see the screenshot below showing the number of batches reviewed and progress towards reaching ‘stability’). ‘Stable’ means the software has reached a point where it is correctly assessing the relevant / not relevant classification in line with the lawyer review with a high degree of consistency.

![Screenshot showing progress indication]

6. At completion of the review process, the software typically takes between 1 and 3 hours to calculate a ‘relevance score’ for all of the documents in the collection. The score is a number between 0 and 100.

7. The Relevance software also provides useful statistics including a list of keywords / phrases used ranking in relation to the importance the software has placed upon such words / phrases in relation to determining the ‘relevant’ and ‘not relevant’ status of documents (see below for an example screenshot).

![Screenshot showing include and exclude keywords]

8. Depending on the nature of the documents to be reviewed, it is normal to find that the relevance scores are grouped towards either end of the 0-100 scale. The final analysis includes various statistics including a graphical representation of the distribution of the relevance scores (see screenshot below) so as to assist with formulating an approach to reviewing documents thereafter.
9. Finally, the documents along with their relevance score are loaded into an online review platform such as Relativity, CaseLogistix or Concordance. The legal review team can then use the relevance score to prioritise, quality check and potentially eliminate documents with very low relevance scores.

8.2.25 Everlaw

Everlaw is a collaborative, cloud-based platform for in-house counsel, litigators and the government that enables teams to discover, reveal, and act on information to better drive internal investigations and positively impact the outcome of investigations.

Unlike expensive third-party service providers and slow, unwieldy, client-server software, only Everlaw combines speed, security, and ease-of-use into a unified, comprehensive solution that unlocks the collaborative power of teams and enables them to investigate issues more thoroughly, uncover truth more quickly, and present their findings more clearly.

The platform provides three primary capabilities, enabling organisations to Discover, Reveal & Act:

- **Discover**: Streamline every step of the eDiscovery process, from data upload and processing all the way through to search, review, and production.
  - **Data ingestion**: Everlaw accelerates the document review process by enabling reviewers to upload their own documents, plugging in seamlessly with third-party cloud hosting platforms, and ingesting documents quickly.
  - **Search**: Everlaw's instantaneous search results occur with even the most complex search strings. The ability to visually build searches allows both novice and power users to narrow their searches without concern of the elusive missing parenthesis.
  - **Review**: Providing exceptionally fast 'doc-to-doc' review speeds and shortcuts like coding pre-sets, users are able to complete their review significantly more quickly on Everlaw. Native documents are supported and text documents, as well as native spreadsheets, can be easily redacted.
  - **Productions**: Everlaw users can create on-the-fly disclosure lists in our cloud-based production environment. Additionally, Everlaw gives the ability for user driven productions allowing the ability to generate, modify and share legal document productions at any time.

- **Reveal**: Leverage powerful analytics, machine learning, and interactive visualisations to accelerate review and identify the most valuable information.
  - **Advanced Analytics**: Review and understand all documents continuously in the Everlaw platform, whether they be foreign language documents, media files, or emails. With features like Data Visualisation,
users explore data at a glance without the need to review individual documents or conduct a predetermined search.

- **Machine Learning:** Expedite and prioritise review by surfacing relevant documents more easily and quickly than ever. Leverage supervised and unsupervised machine learning in every case with predictive coding and document clustering.

- **Act:** Craft narratives and efficiently manage the end-to-end process of investigations or litigation with a secure, integrated suite of collaborative tools.
  - **Collaboration:** Make decisions faster and move issues to resolution sooner in a secure, unified and collaborative environment. Everlaw is the only solution that combines powerful document review and analytics with secure in-platform sharing, joint editing and communication.
  - **Narrative building:** Ensures alignment while organising key documents into a coherent body of evidence and crafting compelling arguments. Reap significant cost and time savings by building outlines, organising documents in timelines and handling depositions on the same digital platform.
  - **Witness Statements:** Improve the process by providing lawyers a single solution to locate and use exhibits, prepare for and take witness statements, and then efficiently harvest critical evidence. Prepare witness questions, track and communicate about live witness testimony, and analyse transcripts to prepare next steps.
  - **DSAR Deliverables:** DSAR response templates can be created collaboratively in Storybuilder where users can quickly insert documents to sit alongside the requests; giving greater structure and clarity to both the organisation and to the data subject. The package can then be exported to PDF, for electronic sharing or printing and it is also possible to provide a more traditional document production through a secure link, or even to give the data subject limited access to the platform.
Matter Management: Enterprise grade capabilities to support the complex legal needs of large firms and corporations and efficiently manage project outcomes with integrated and collaborative project, user and case matter management tools on a simple yet powerful platform.

- Project administration: Drive consistency and streamline complex functionality with granular access permissions for enterprise-class security. Administrators have precise controls on access permissions within matters to amplify consistency, security and collaboration.

- Automation Accelerate project set-ups, drive consistency and reduce the need for workarounds so your teams can spend the time on more substantive legal work. Reduce the likelihood of manual errors during review with customised coding rules and drive consistency across matters to streamline the review process.

To deliver on these promises, Everlaw started with a dramatically different philosophical approach, centered on five key principles:

1. Security

At Everlaw, we prioritise keeping important data safe with enterprise-class security protocols and privacy standards. Data security is foundational to our core philosophy. We are fiercely protective of client data, which is why we take a proactive approach to data security. As a provider of cutting-edge software for customers with highly confidential data, we recognise how important security is to protecting information. We understand that the security of our product and the compliance culture of our business are instrumental in maintaining the trust our customers place in us, and we are committed to protecting that information. Many of our cloud competitors are also hosted on AWS, but that is where their security measures come to an end while our approach to security goes much further. Everlaw is SOC 2 Type II certified, both HIPAA and GDPR compliant, as well as FedRamp Authority to Operate. We host data on AWS instances in the country that data needs to reside with live instances in the US, UK, Canada, EU, and Australia.

2. Respect for Users:

This core value is represented throughout our platform and in the way that we function as a company. Our goal is to deliver elegant solutions with thoughtful design which makes for happy software users who can not only get their job done, but even find enjoyment in the process. We are focused on long term success with our partners, so
that means we aren’t interested in making quick changes to the platform that don’t align with our long term strategies.

3. Speed:

Big data can be synonymous with slow data, unless software is specifically built for modern data volumes. Everlaw is built to provide lightning fast performance no matter the size and scope of the case. We’re built for Petabytes. 10x faster than Relativity and 5x faster than nearest cloud competitor in processing and productions.

4. Innovation:

Everlaw delivers impactful new features every four weeks via the cloud; this ensures that customers stay in front of the curve and keeps us “close to the code” (bugs don’t linger).

Releases are automatically deployed for every case, at no cost. When we released audio/video transcription, we automatically reprocessed every audio/video file on the platform so that all existing customers could access the benefit of this feature. We release products broadly because we don’t believe our customers should have to manage version control or change management.

5. Transparency:

We believe that when information is open and available, outcomes are more efficient for everyone. There are two main ways that we think about transparency.

- First, transparency is built into the product itself. Everlaw provides exposure to reporting at the case level as well as at the organisation level, allowing our partners to closely manage their projects and the associated costs.

- Second, transparency is built into our pricing, which manifests itself in our service model. Service at Everlaw focuses on educating users about our platform; everything is designed to be self-service but we have a dedicated team to support and provide training at no additional charge to our customers. This keeps our pricing transparent, removing any unpredictable PM time from being billed. We believe in enabling our customers to fully leverage our advanced functionality without depending on us for solutions.

Exego Extract is our exclusive processing engine that revolutionized the eDiscovery landscape. Granted two Patents for extracting and indexing embedded text, Exego technology completely and accurately processes data that most other engines miss. Exego is particularly effective in dealing with embedded objects, encrypted data and other complex file types - making lengthy exception reports a thing of the past. Specifically, Exego handles Bloomberg® Terminal mail and chat like no other platform in the business. Exego Extract then seamlessly delivers a more complete set of fully processed data to Exego Select for pre-review.

Completely processed data - including the most difficult file types like Bloomberg®, Lotus Notes®, mobile data and embedded text - is normalized, and appears in Exego Select, ECA and pre-review, ready to be fully searched and indexed along with the rest of your typical eDiscovery data. Families and attachments are properly reconstructed to maintain the email relationship to its attachments. Without this custom development, during document review, the reviewer would not be able to view or understand the relationship to the attachments. Best of all, you will have access to many TAR tools in Exego Select that are not typically available in ECA (such as email threading, bulk tagging and robust reporting) at no additional cost.

Exego Review provides our clients with the final piece of our end-to-end discovery solution, featuring a detailed dashboard, collaborative tools, and an expert hosting team standing by. All of this without ever leaving the agile and convenient Exego interface. Exego Review is completely web-based, and PC and Mac compatible. With easy-to-navigate features, clients can track team and individual review progress at a glance, personalize screen content and layout, and increase speed and efficiency. Secure password resets, customizable workflows, dynamic coding, proximity highlighting, multiple redaction capabilities round out the list of features available within a few clicks. Of course, Exego Review users can rely on the same powerful reporting that they are already accustomed to in Exego Select.

Relativity is a complete review solution with the power to handle the largest and most complex electronic discovery projects and the ease-of-use to let users focus on documents, rather than on technology. As a feature-rich online review platform, Relativity provides image and native file review, powerful searching, diverse coding options, flexible workflow capabilities, integrated productions, Unicode and foreign language support, and concept searching.

8.2.27 ExhibitManager

ExhibitManager is the intelligent and user-friendly software that supports litigators and arbitration practitioners in legal proceedings, from collecting and reviewing documents, to writing legal submissions, as well as creating exhibit bundles and interactive eBriefs, that can be read and annotated on any computer including iPads.

Leading international litigators and arbitration practitioners on four continents are using ExhibitManager today. Experience shows that the time savings associated with handling exhibits typically are in the magnitude of several hours to even days. ExhibitManager provides an end-to-end solution delivered in record time for your core activity: writing submissions and preparing for hearings.

How do we compare to other litigation support software?

ExhibitManager is a highly sophisticated tool that supports you in three key tasks, necessary for successful litigation/arbitration: (1) Cite exhibits directly into your submission in uniform citation style from the evidence stored in the ExhibitManager database. (2) You quickly number, renumber, add lists of exhibits, stamp and bundle exhibits according to your specifications. (3) You create interactive eBriefs in PDF format with a few mouse-clicks. No need of an external service provider, changes can be done until the very end.

You may fully adapt the numbering and formatting of exhibits to suit the requirements of your Code of Civil Procedure or Arbitration Rules.

ExhibitManager promotes teamwork as all lawyers working on a legal brief are accessing the same documents. Teams may co-editing a brief in Microsoft Word and update the exhibit numbers in one or several documents. Team members benefit from ExhibitManager during case analysis, when writing and finalizing legal submissions:

1. Case analysis

You may organize exhibits in different ways, e.g. by tags/issue, by exhibit number, chronologically etc. OCR and full-text search exhibits to find relevant information in a user-friendly document previewer. You can annotate exhibits and share knowhow within your team.

Description Screenshot 1: ExhibitManager main view; left: overview of organized exhibits by tag/issue, right: exhibit in preview with annotations.
2. Writing legal submissions

Insert exhibits into your legal submission with uniform and fully customizable styles. Exhibits can be numbered automatically. They may be updated with a single mouse click when their order has changed in your submission, or you may even update exhibit numbers in multiple documents (e.g. submission, witness statements and expert reports).

- Update exhibits in multiple documents at the same time (e.g. Statement of Claim and all witness statements).

Description Screenshot 2: Citation Buttons and Button update exhibit numbers

ExhibitManager integrates seamlessly with Microsoft Word: You can easily review exhibits cited in the submission by right clicking on the exhibit citation.

Description Screenshot 3: ExhibitManager offers reviews of exhibits when working in Microsoft Word.
3. Finalize submissions

ExhibitManager supports you in various ways when finalizing your submission:

- **Lists of exhibits** can contain one or more exhibit type (e.g. Claimant’s fact exhibits) and be ordered by exhibit number, chronologically, or by order of appearance. Creating combined chronological lists of exhibits is now a matter of seconds.

- ExhibitManager creates **bundles** and stamps exhibits automatically. In addition to the exhibit number, stamps may include any additional information such as draft, version etc. All documents in the electronic bundle are named properly.

- ExhibitManager creates **customized trial bundles**.

- Create a **hyperlinked eBrief** (.pdf or .docx format) of your submission with a few mouse clicks. No more external service providers are needed. This saves you valuable time and you can do last minute changes, if necessary.

![Description Screenshot 4: eBrief Assistant to create your eBrief within minutes.](image)

For more information, please see the video “Introduction to ExhibitManager”.
System requirements

- ExhibitManager uses an embedded, industrial-strength SQLite Database (included). However, we recommend ExhibitManager database runs on a Microsoft SQL Server 2008 or newer (MS SQL Server licenses are not included). This configuration is particularly recommended for larger teams working on one project concurrently.

8.2.28 Exterro Software Suite

Exterro Orchestrated E-Discovery enables customers to manage, measure, and optimize e-discovery processes, unifying all e-discovery phases and all internal and external stakeholders on the same technology platform. Information is available anytime, from anywhere. The result is that clients are able to complete the e-discovery process in far less time and at a much lower cost.

Exterro software solutions that can be deployed on premise or in the cloud:

EXTERRO DATA MAPPING The only application designed to create a data map of all of your company’s electronically stored information (ESI). It enables legal teams to rapidly identify the most relevant ESI repositories to a legal matter and eliminate those that add unnecessary cost and time.

EXTERRO LEGAL HOLD Widely recognized as the gold standard for legal hold software for Global 2000 companies. Designed for paralegals up through the General Counsel, Legal Hold’s ease of use and rich feature set power immediate productivity gains.

EXTERRO OFFICE 365 EXPLORER Significantly reduces the time, money and resources needed to get to the facts of your matters by enabling you to quickly identify key data and custodian relationships. This unique product gives you the ability to assess data stored in Office 365 without having to scan or index it first.

EXTERRO E-DISCOVERY DATA MANAGEMENT The sole data management solution on the market that identifies the most important ESI before collection. Features advanced, innovative design in which processing happens during collection, and almost immediately produces content for review, “collapsing” the process and dramatically decreasing the amount of time it takes to get to the facts of a case, while also slashing costs and eliminating the need for technical intermediaries between the software and legal users. Encompasses collection, processing, review and production. Incorporates the latest innovations in artificial intelligence in the ECA and Review stages.

EXTERRO PROJECT MANAGEMENT The only purpose-built project management system designed specifically for eDiscovery. Leveraging built-in workflows and intuitive dashboards, Project Management automates repeatable processes for consistent, high quality projects.

EXTERRO EMPLOYEE CHANGE MONITOR Employee Change Monitor reduces operational risk by replacing error-prone manual processes with automated, pre-defined actions appropriate to employee status changes. Employee Change Monitor mitigates the risk of electronically stored information (ESI) spoliation and court sanctions when employees under a legal hold depart or change roles.

EXTERRO FILE ANALYSIS Exterro File Analysis provides the critical foundation for any Information Governance project by delivering key insight into your unstructured data assets.

8.2.29 eZSuite (KNOVOS)

eZSuite™ is a complete, full-spectrum platform that covers the entire litigation lifecycle, eliminating the need for any third-party plug-in solutions. The suite comprises 4 independent but seamlessly integrated modules:

- **eZProcess** - The data capture module
- **eZAnalytics** - The analytics module
- **eZVUE** - The knowledge management/ECA module
- **eZReview** - The workflow review module

**eZProcess**

At the heart of eZSuite is eZProcess, a robust data treatment and processing solution that provides maximum control and agility in managing electronically stored information.

- Data Inventory Audit
- Data Treatment and Culling
- Exception Handling and Management
- Rich Content and Superior Data Quality

**eZAnalytics**

A powerful content intelligence and data mining module that allows users to gain powerful insight into their documents.

- Near-Deduplication
- Content Clustering
- Key Phrases
- Entity Analytics
- Email Threading and Domain Analysis

**eZVUE**

An information management system and Early Case Assessment platform, eZVUE’s comprehensive analytical features and intuitive visual interface help users understand and filter large quantities of data.

- Intuitive User Interface
- Powerful Concept and Content Searching
- Built-in Budget Reporting
- Work Product Reusability Within and Across Matters

**eZReview**

Renowned for its design, functionality, and ease of use, eZReview allows users to rapidly review electronically stored information (ESI) and assess even the most complex cases. eZReview’s scalable and customizable to specific, unique case requirements, complete with advanced analytic capabilities and customized workflows.

- Automated Workflows Configuration and Review Rules
- Built-in Quality Control Mechanisms
- Integrative predictive coding module, ADP

8.2.30 FRA Software Suite

True Portable DATA Processing – Anywhere in the World

The FRA Mobile Solution is a comprehensive, end-to-end eDiscovery processing and Review platform, scalable to handle complicated project requirements, and can be installed on-site independently or integrated into the client’s infrastructure anywhere in the world. FRA developed this solution using its decade long experience in working collaboratively with law firms in implementing robust data privacy compliant solutions. Multi-national corporations and their counsel have used the solution extensively as an important tool in accessing the data required to address cross-border issues without breaching in-country data constraints or compromising relationships with key stakeholders.

Solution

The FRA Mobile Solution comes packaged in a laptop, desktop or server (depending on the case requirements) and can be mobilized within days to process and review data on-site anywhere in the world. When data cannot be moved from its origin due to data sensitivity constraints (for personal, corporate or government reasons such as data protection, state secrecy, commercial secrecy, or intellectual property), FRA’s solution allows secure processing and review at the source. Applications include internal or external investigations, regulatory responses, dispute resolution, or compliance audits.

The system is stand alone and can be shipped to any location where local regulations or sensitivities may restrict the transfer of data across borders. FRA has successfully deployed this solution in a number of jurisdictions including Uzbekistan, Switzerland, Italy and France. FRA’s knowledge of technology, coupled with in depth understanding of local data restrictions, allows FRA to support multinational clients efficiently in handling complex cross border issues.

Technical Specifications

Capacity and Throughput

Laptop: Process up to 100GB/24 hours – up to 1TB (1,000GB)
Desktop: Process throughput > 100GB/24 hours
(14,000GB)
Server: Process throughput > 200GB/24 hours
(40,000GB)

Solutions

Processing engine: Digital Reef
Review platform: Relativity

Data Privacy Management Suite (DPM)

FRA’s software development team created the DPM suite in response to our client’s legal obligations to manage data privacy in several jurisdictions. This application is often implemented on projects that involve a European discovery element.

DPM is a rules based system that is flexible enough to manage on the most complex of cases. Rules can be applied at the project level, custodian level or individual media
level. A full audit trail is maintained within the system which can be exported to support any disclosure that is provided to regulators or opposing parties. DPM is wholly owned and maintained by FRA.

**Exclusion Rule Hierarchy**

Exclusion rules can be defined at multiple levels, as described in the table below:

<table>
<thead>
<tr>
<th>LEVEL</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Project</td>
<td>This is the highest rule level, and will apply to all custodians and media in the project.</td>
</tr>
<tr>
<td>Custodian</td>
<td>Rules defined at the custodian level will apply to all media for the specified custodian.</td>
</tr>
<tr>
<td>Media</td>
<td>Rules defined at the media level will only apply to the specified media.</td>
</tr>
</tbody>
</table>

**Fig. 1 - Rule level hierarchy**

**Exclusion Rule Types**

Several types of exclusion rules can be defined:

<table>
<thead>
<tr>
<th>RULE TYPE</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>No Exclusion</td>
<td>Specifies that no exclusion rules should be applied for the project, selected custodian, or selected media.</td>
</tr>
<tr>
<td>File Path</td>
<td>Any file path containing the rule’s text will be excluded from searches.</td>
</tr>
<tr>
<td>Sender\Recipient</td>
<td>Any emails between the two parties defined in the rule will be excluded from searches.</td>
</tr>
<tr>
<td>Email Subject</td>
<td>Any emails containing rule text in the email subject will be excluded from searches.</td>
</tr>
<tr>
<td>Email Folder</td>
<td>Any email folders containing the rule’s text will be excluded from searches.</td>
</tr>
</tbody>
</table>

**Accessing Exclusion Rules**

Data privacy exclusion rules can be viewed, added, and edited from within the MediaWebApp utility. After logging into the web application, click on the Exclusion Rules link (shown below) within the navigation section of any page.
After clicking the Exclusion Rules link, the Exclusion Rules page will appear. If no rules presently exist for the selected project, the page will appear with a message stating that no rules were found for the project:

When rules do exist for the selected project, they’ll be shown in a table:

A full audit trail is maintained within the system which can be exported to support any disclosure that is provided to regulators or opposing parties. DPM is wholly owned and maintained by FRA.

**FRA-Early Case Assessment (ECA) Tool**

The FRA-ECA tool has been developed to provide a streamlined way to understand the make-up of complex processed data sets at the earliest opportunities. FRA’s project managers have the ability to guide clients through various reporting options to validate or corroborate expected outcomes based on the data that has been collected. Several key components of the ECA tool include:

- Reporting on de-duplicated totals in real time and within hours of the data being uploaded.
- Reports by custodian.
- Reports by file type.
- Keywords can be tested for responsiveness.
- Review strategy can be determined based on document numbers, language type or file type.
- Exception volumes can be determined such as the number of encrypted files.
- Billing accuracy can be determined due to real-time data volume reports.

ECA works seamlessly with all of FRA’s hosted review environments and data staging platforms.

When a user first logs into the ECA tool they are taken to the home page which provides key information about the project, such as the total document population, the method of de-duplication, the number of custodians and media within the project.
Searches

The Searches page acts as the main “hub” for the selected project. The Searches screen displays a list of all searches that have been created for the project, and it also provides an interface for creating new searches.

New Search Screen

The New Search screen provides an interface for creating new searches for the currently selected project.
Search Results
The Search Results screen will only be enabled for searches that have been completed.

Reports can be generated and exported to Excel for further analysis. FRA clients can instantly reap the benefits of analysing their data sets well in advance of reviewing any documents.

<table>

8.2.31 **iCONECT**

iCONECT v10 uses our new innovative features such as Oversight; quickly identifies mis-classified documents, CAL; Continuous Active Learning platform that quickly identify and focus on documents that really matter and COVER; a module that gives you identification, report and redaction/blackout of PII, PHI, sensitive data or keywords to comply with CCPA and GDPR standards.

**Enhanced Security**

iCONECT v10 has passed rigorous testing of US government's FedRAMP security resulting in even more control applied to your hosted data. With 9 layers of security including the ability to integrate with Active Directory, you can restrict view, edit and delete functions by user or group down to the meta-data/document level.

**Faster UX**

iCONECT v10 brings a whole new level with Faster UX. Restyled and redesigned with the latest browser technologies for a crisper and more intuitive user experience.

**International Ready**

With 8 languages to choose from (including German, Spanish, Mandarin, French and more) interacting with iCONECTv10 has never been easier.

**Thumbnails, Facetted Search and more.**

We’ve taken ‘ease of use’ to the next level with thumbnails, drag/drop, custom folder templates and uber simple searching. Finding document is as easy as booking travel or buying on Amazon with ‘facetted search’.
>GDPR Ready with COVER
iCONECT v10 is in sync with recent EDRM and GDPR changes, helping you identify sensitive information and PII in every document and throughout the lifecycle of your matter. Once identified, use PII redaction with COVER. The COVER module gives you identification, reporting and redaction/blackout of PII, PHI, sensitive data or keywords to comply. Exclusive to iCONECT.

>Charts and Graphs
From tally of meta-data, progress reporting or user metrics through analysis, easy charting and graphing of data is only one click away. You can even share them with co-workers through iCONECTv10’s ‘project dashboard’.

>Oversight
Take it up a notch with OVERSIGHT. iCONECT v10 is tracks progress and quickly identifies mis-classified documents and potentially unfocussed review team members. Powered by Sentio. Exclusive to iCONECT.

>Continuous Active Learning
Aim higher with CAL. iCONECT v10 is eDiscovery’s most intuitive Continuous Active Learning (CAL) platform helps you quickly identify and focus on documents that
really matter. Powered by Sentio. Exclusive to iCONECT.

> Video and Audio Management
View, listen, tag and comment linked to timestamps in video and audio files as part of a seamless eDiscovery workflow.

> Deployment Optionality
Adhere to your firm's infrastructure and security policies with Deployment Optionality. iCONECT v10 allows placement of the iCONECTv10 system behind your firewall, at a data center, with one of our worldwide LSPs, hosted or infrastructure only.

> Self Serve
Own your project with Self Serve. iCONECT v10 is has a full self-serve environment to help create, upload and onboard any project to get review started quicker. Complex project workflows can be saved as templates for easy re-use from case to case.

> More Transparency
iCONECT v10 is fully tracks user activity metrics for resource management and simplified licensing and billing reports for calculation by project/case and user metrics.

> Now with MOBILE upload and review [mobile screenshot]
Whether you're in the field or at a client site, the ability to access your information is seamless, even from a mobile or tablet device.

8.2.33 In Control (Reveal Data Systems)

InControl is a disruptive technology that will change the way you do business. Having a superior eDiscovery platform helps clients save time and money while preparing for litigation, performing a criminal investigation, or preparing for a merger. But even with the flexible and easy-to-use InControl system, discovery still takes a significant amount of time. Reveal Data provides the advanced intelligence solutions needed to maximize efforts during discovery and investigation. InControl's fully integrated analytics can be used at any point in a workflow, on any project, to help our clients identify patterns in their data, glean critical insights, and to focus their efforts to get to review faster. Our analytics empower legal teams to create the best strategy for success and close their investigation faster. Our platform can be installed on a client server or used in the cloud, giving legal teams the freedom to work on eDiscovery anywhere at any time. The cross-browser compatibility and support for multiple languages ensures our clients have the ultimate freedom.

Our suite of offerings includes:

**Forensic collection.** Reveal Data employs a team of forensic data specialists who are at the ready to help uncover the information needed. We have designed the InControl Crawler in parallel with our advanced methodology to uncover the forensic data, wherever it lives. Our in-house specialists can also provide expert testimony or help to secure it from other appropriate experts.

**InControl Crawler** is an innovative enterprise search platform that provides the flexibility to find the data needed when needed. This advanced network search solution facilitates quick and easy searching across large data repositories, both locally and remotely. Our comprehensive platform works for businesses of every size and type that traffic in large volumes of data. It improves organisation, finds documents fast, creates comprehensive reports, and preserves unstructured user-created data for litigation holds and more.

**Early case assessment.** Our ECA tools help our clients to gain a better understanding of the challenges and weaknesses in their case with an early case assessment that they can use to formulate a stronger strategy. Our tools include data deduplication, near duplication, email threading, bulk tagging/coding, extraction of metadata and text, and culling and filtering data by keywords, dates, people etc. Using our ECA tools, Reveal can save the customer time, effort and significantly reduces costs.

**Processing.** InControl streamlines discovery and helps litigation teams process all the data and evidence without having to move between multiple systems, speeding up workflows and reducing risk. Our specialists oversee processing of a case from start to finish, using the right technology and framework for its specific needs.

**InControl** has everything needed to categorise and sort data to easily identify the most important information in the case. This presents smarter insights so legal teams can see the overarching facts in the case and create the strategy that leads to success. The InControl Processing engine integrates seamlessly with the InControl review platform, allowing clients to use one system for all of their data.

**Accelerated Review.** We recognise that corporate legal departments are under increasing pressure to control costs and to achieve greater cost predictability which is no easy task in the era of big data. Data volumes have exploded and document review, traditionally one of the largest percentages of a litigation budget, can seem insurmountable regardless of resource allocation. Given these challenges, we have integrated Technology Assisted Review (TAR) and data visualisation functionality within the InControl eDiscovery Platform to accelerate the document review process. This advance technology uses Advanced Text Analytics and Continuous Active Learning to determine responsive and non-responsive documents sets.
InControl Accelerated Review (IAR) and data visualisation uses machine learning to find relevant documents based on input provided by human users. By a user reviewing and tagging a small portion of the data set IAR uses document tags to train a ranking algorithm that orders the documents from most to least likely to be relevant. Unlike traditional linear review, Accelerated Review allows the managing attorney to determine that a review is complete without requiring ‘eyes on’ review of every document. The managing attorney has the ability to monitor the decisions being made by reviewers in near real-time to more effectively control a pool of document reviewers. They can quickly identify issues and refine the review protocol in the early stages, before costly re-review becomes necessary. Using IAR, we offer real-time reporting which shows the accuracy of the trained model on-the-fly.

IAR provides lawyers with the ability to eliminate human review for large percentages of a document collection – often as much as 90%, potentially shaving millions off a company’s legal spend.

Online review. The InControl software is flexible, reliable and customisable with a user friendly interface. It is cross browser compatible meaning that InControl can be accessed and used in the office, or at home on an iPad using any internet browser. There are no add-ons or installs required, it just works! This mobility allows teams to maximise their time and provides access to the information whenever and wherever it is needed. Our review platform helps to keep our clients InControl of the entire document review process. Users experience day one productivity with minimal training. InControl has full production capabilities including redactions and stamping.

Transcript Manager. InControl has a fully-integrated Transcript tool. Once a transcript is uploaded as a text file, a reviewer has the ability to search by page and line, highlight and tag key portions of the transcript, and hyperlink exhibits or other documents within the case.

8.2.34 Index Engines

It is important to select a identification, collection and preserving platform that supports backup tapes. Backup tapes have been neglected as a source of ESI in the past, however they have quickly become a reliable and convenient source of ESI. Backup tapes are a point in time snapshot of user data and emails. It is far more convenient to collect data from tape than from a live production environment.

Index Engines provides a cost-effective and comprehensive, electronic discovery and early data assessment solution for backup tapes. Index Engines solutions provide the following:

ACCESS: Delivers a single unified view into all data sources, from forensic images and networks to legacy backup types. No other product can get access to all this data allowing de-duplication and queries to be performed across a wide data set, simplifying the culling process and ensuring all ESI is forensically sound and reliable.

AUTOMATION: Index Engines has automated the workflow, accelerating the process of identifying and collecting ESI. Automated, stored queries can run on a scheduled basis to automatically find and extract ESI from any source. Automation minimizes manpower requirements and reduces the time and cost to collect data.

EFFICIENCY: Process large volumes of data quickly, from networks to backup tapes. A unique patented architecture processes speeds of 1TB per hour using a single node. Large volumes of data can be quickly processed and culled in order to meet even the tightest deadlines. A single Index Engine can process up to 70TB of data from any source.

FLEXIBILITY: Deployment options allow access to Index Engines technology through onsite deployment to manage the ESI collection process in house. Additionally, a cloud service is available for backup tapes so they can be indexed and searched using a web-based interface, where you can tag relevant ESI for extraction.

EASE OF USE: Most important is to have an interface that is automated and easy to use. Index Engines automatically eliminates unnecessary files and emails using powerful deNISTing and de-duplication algorithms. The intuitive interface allows one click culling to eliminate full email domains and file locations, allowing for rapid filtering of the content.

LOWERED COST: Index Engines provides a cost effective platform for delivering access to data on networks, forensic images and even backup tapes. Because of the efficiency built into the platform the predictable costs are lower than other solutions and are in line with your client’s budget. Additionally, Index Engines allows you to consolidate multiple tools into a single unified identification and collection platform that simplifies the project and delivers more reliable results.

8.2.35 Integreon Tools

Software Information

Integreon maintains strong partnerships with the world’s leading technology developers for hosted review and analytics, including kCura’s Relativity, OpenText, and Venio Systems. These partnerships provide access to the review experience and multilingual expertise of Integreon combined with the technical capabilities of each partner. Clients gain a best-in-class solution for their first-level document review, which can bring together analytics and technology-assisted review with Integreon’s renowned Lean Six-Sigma processes and workflows.

Data Reduction and ECA Software:

Integreon’s tools include IPRO Allegro, Mindseye TunnelVision, and VenioOne and enable testing different parameters for data domains, email senders and recipients, file extensions and other metadata fields, making data easier to visualize and the process for defensible reduction more manageable.

The easy-to-use web interfaces also allow clients to test date ranges, key terms and derivatives; select de-duplication options; and set file-type and domain exclusions to ensure relevant documents are sent into subsequent full processing and review.

Processing and Production Software:

Integreon’s technologies for full processing include IPRO’s eCapture, Mindseye’s TunnelVision, and VenioOne among others. Integreon’s discovery consultants also work with each client to select the tools and technologies that will best meet their specific needs and case requirements.

Hosted Review Software:

Integreon’s technologies for hosted review include:

- **Relativity from kCura**: Integreon has been a partner with kCura, developers of Relativity e-discovery software, since 2010. Integreon is a Relativity Premium Hosting Partner.

  Integreon offers clients the choice of (1) using the Relativity review platform as an al a carte hosted service, (2) as a managed service, or (3) as an integrated document review process that combines the review platform with managed review services. The company also provides exceptional support from a team of Relativity Certified Administrators.

- **OpenText**: Integreon and OpenText have been working together for three years, and more recently formed an alliance partnership as a mutual commitment to their clients in support of review engagements in the UK and Canada.

  The partnership provides clients access to the review experience and multilingual expertise of Integreon combined with the technical capabilities of Recommind. Clients also gain a best-in-class solution for their first-level document review, bringing together OpenText’s innovative analytics and predictive coding technology and Integreon’s renowned Lean Six-Sigma processes and workflows.

- **VenioOne**: Integreon and Venio Systems recently announced a partnership in which Integreon has become a “trusted partner” for offering and support of the VenioOne and Venio On-Demand platforms. Through this technology partnership, Integreon offer Venio as an all-in-one web-based e-Discovery solution that helps law firms and corporations to decrease costs, lower risks, increase reliability and improve management of litigation.

8.2.36 Intella Suite (Vound Software)

Intella Suite (Vound Software)

With Intella's unique Cluster Map technology, relationships and timelines between custodians and Electronically Stored Information (ESI) are instantly visualized, so you can quickly drill down through terabytes of information to find the most pertinent of evidence. This innovative approach to digital forensic search minimizes the need for a broad array of investigators and significantly cuts the time and costs organizations normally need to carry out digital investigations, audit requests and e-discovery.

Cluster map view

Visual mapping of custodians communication networks
Redaction Editor – Featuring NEW color-coded redactions.
Chapter 8 – Supplier & Software Details

Software Options:

**INTELLA CONNECT AND CONNECT PLUS**

Intella® Connect and Connect Plus are web-enabled document review platforms allowing multiple reviewers to simultaneously work on the same case without software installation or complex network and system configurations. Intella Connect allows up to 4 active cases and Connect Plus extends this limit to 10 active cases.

Intella Connect and Connect Plus are remarkably easy to use and require little-to-no training for users, making it ideal for:

1. Consultants who allow clients remote access to review a case
2. Organizations with multiple or remote locations who investigate and review the same case
3. Multiple departments and review teams that need to jointly review the same case.

Intella Connect and Connect Plus are managed and installed on a workstation in your environment or using a web browser over HTTP or HTTPS. You control whether Intella Connect or Connect Plus are used only on the local network or hosted on the cloud for access by remote users. The single Intella Connect or Connect Plus installer file configures all necessary components needed to manage and share a case directly with your reviewers. Reviewers do not need a dongle and only require a compatible web browser to review a case and data; no client installation or download is required.

**INTELLA TEAM**

Intella Team enables multiple individuals (reviewers, investigators, paralegals etc.) to independently and simultaneously review Electronically Stored Information (ESI) / digital evidence.

With advanced export and sharing features, Intella Team makes it easy for analysts and reviewers to collaborate on investigations within a purpose-built platform.

Intella’s robust indexing engine delivers market-leading speeds for faster processing of data sets. Together with a user interface which is remarkably easy-to-use and multiple search visualization options including our unique Cluster Map, users are able...
to quickly drill down through volumes of unstructured data to find the most pertinent evidence with ease.

Intella® TEAM is comprised of two components:

1. Intella TEAM Manager for one case manager
   - Index & prepare case data or evidence
   - Share case data between team members
   - Combine, review and approve work of team members

2. Intella TEAM Reviewers for up to 3 team members
   - Independently search, filter, bookmark, tag, and comment on case data
   - Transfer work back to the TEAM Manager for review and approval.

INTELLA PRO
Intella Pro licenses are unlimited in case data sizes, making it ideal for corporate investigators, professional service firms and consultants who work on cases with large volumes of Electronically Stored Information (ESI) / digital evidence.

Intella’s robust indexing engine delivers market-leading speeds for faster processing of data sets. Together with a user interface which is remarkably easy-to-use and multiple search visualization options including Intella’s unique Cluster Map, users are able to quickly drill down through volumes of unstructured data to find the most pertinent evidence with ease.

INTELLA 250
Intella 250 is a powerful yet intuitive digital investigation tool for single users working on cases with data sizes up to 250 GB.

Intella’s robust indexing engine delivers market-leading speeds for faster ESI / digital evidence processing. Together with a user interface which is remarkably easy-to-use and multiple search visualization options including Intella’s unique Cluster Map, users are able to quickly drill down through volumes of unstructured data to find the most pertinent evidence with ease.

INTELLA 100
Intella 100 is a powerful yet intuitive digital investigation tool for single users working on cases with data sizes up to 100 GB.

Intella’s robust indexing engine delivers market-leading speeds for faster ESI / digital evidence processing. Together with a user interface which is remarkably easy-to-use and multiple search visualization options including Intella’s unique Cluster Map, users are able to quickly drill down through volumes of unstructured data to find the most pertinent evidence with ease.

INTELLA 10
Intella 10 is a powerful yet intuitive digital investigation tool for single users working on cases with data sizes up to 10 GB.

Intella’s robust indexing engine delivers market-leading speeds for faster ESI / digital evidence processing. Together with a user interface which is remarkably easy-to-use and multiple search visualization options including Intella’s unique Cluster Map, users are able to quickly drill down through volumes of unstructured data to find the most pertinent evidence with ease.
W4

W4 lets investigators review digital evidence rapidly, locate items of interest quickly, and report their findings easily.

W4’s unique Events view shows activities and other events in chronological order.

W4’s Links graph shows how items are linked, revealing accounts, ownership, devices, and actions.
W4’s Geolocation enables you to locate items with geodata on a zoomable world map.

8.2.37 **Intelligent Voice®**

High speed audio and video analysis and review underpinned by:

- Ultra-fast speech to text processing – using NVIDIA® GPU cards, server or cloud based.
- Topics of Interest – extracted via a proprietary technique and automatically surfaced.
- Hyperphonic Searching – combining the best of transcribed text, word probability lattice and phoneme-based search to offer the widest possible range of searches across a dataset.
- Biometric Voiceprint Searching – independent of any metadata or transcribed text.
- Lexical and Acoustic Model Tuning
- The Audio Discovery Reference Model© framework:

![The Audio Discovery Reference Model](image)

Copyright Intelligent Voice Limited 2017 / [www.intelligentvoice.com](http://www.intelligentvoice.com)

**Biometric Identification**

With audio collection metadata, Caller ID is often withheld, and where one is identified, it may be based on a phone line being assigned to them rather than them actually being on the call. Biometric Voiceprint Search enables recordings which are likely to contain a particular speaker to be identified and collected.

**Lexicon Extension**

Any of the available lexicons can have additional words, phrases and acronyms added directly to them. As many distinct lexicons as desired can be maintained, e.g. Financial Services versus Pharmaceuticals; Interbank Lending versus Foreign Exchange Swaps.
Model Tuning
If text directly related to the matter is available, such as email or IM, this can be used to tune the lexical model to be used. Any word or acronym from any of the documents within the corpus which is not already in the lexicon is automatically added to it. Words which tend to occur together and/or more often within the documents will increase the probability of Intelligent Voice correctly transcribing them together when audio is processed using the model.

It is also possible to create a custom acoustic model for a particular matter with as little as fifty hours of speech and matching transcripts.

Audio Clean Up
In addition to any manual techniques which may have been applied to the audio as a pre-processing step, Intelligent Voice® applies its own noise reduction techniques to optimise the automatic speech recognition.

Accelerated Private Processing
Intelligent Voice’s open source software stack enables fully private processing, whether on air-gapped physical servers or secure private cloud instances. No need for data to leave the jurisdiction, company or even building.

Intelligent Voice’s Neural Networking and machine learning provides greater accuracy in difficult environments such as noisy offices or open trade turrets. It also allows the system to “guess” phrases that were traditionally considered to be “out-of-vocabulary”.

The fastest commercially available Speech to Text processing enables rapid progression to the analysis and review stages.

Even with very low quality audio, valuable text data is obtained that reduces subsequent review time by up to 70%.

Intelligent Culling™
Some audio data may, for one reason or another, be unusable for review. It may be hang-ups, background noise, or speech that is inaudible due to interference. A Confidence Report is available across the entire dataset, highlighting those files that are most likely low-priority review items, and those which are mostly silence or unintelligible.
Chapter 8 – Supplier & Software Details

Topic Trails
A set of suggested topics of interest for the review data set can be viewed:

"north korea"

[Image of automatic topics for radio]

- Artificial intelligence
- Intercontinental ballistic missile
- International Criminal Court
- Chief operating officer
- North Korean defectors
- Air traffic controller
- International community
- President of the united states
- Director of National Intelligence
- Charlottesville, Virginia
- Israeli Defence Forces
- Advanced Placement exams
- United States government
- Defense Intelligence Agency
- World Table Tennis Championships
- Comprehensive Sex Education
- Social Security Numbers
- Classified information
- Israeli Prime Minister
- National Security Council
Selecting any given topic will display the audio or video file or files in which that topic occurs, and also display the topics of interest around each of those files:

Any of the topics displayed around the audio or video files can in turn be selected, in turn showing the audio or video file or files in which that topic occurs, and the topics of interest for these files. As such, not only can this feature surface speech within the audio that a reviewer might never have thought to search for, it can also provide a rapid route into progressively more interesting terms within the data set, e.g. from “Last Ditch” to “Liquidity” to “Nationalisation”.

The list of topics will also automatically regenerate for any search terms run and for any filtering by date and time or custodians, suggesting topics of interest within the results set.

**Lattice Search**

Intelligent Voice® combines the best of transcribed text and word probability lattice to offer the widest possible range of searches across a dataset.

**Speaker Separation & Search**
Using advanced biometric techniques, Intelligent Voice® can show who is speaking at different points in the call. This biometric information can be used to verify phone record metadata, and also to search for a particular custodian using their biometric voiceprint.

**JumpTo™ Review Player**

In addition to standard play and pause and horizontal time bar features, and a video screen if video rather than audio is being reviewed, the JumpTo™ Review Player also contains suggested topics of interest for the audio or video, which can be used to jump to the part or parts of the audio or video where that term occurs:

A searchable, navigable speaker separated transcript text, whereby clicking on any word within the transcript immediately jumps to that point in the audio or video, is also included.

**Redaction**

Audio and Video files can be redacted by highlighting the text and selecting the reason for doing so. Even if the text has been mis-transcribed the word position is accurate to the millisecond, so the system can create a perfectly redacted audio / video file, with a redacted transcript.
Production & Integration

A high-quality transcript can be interfaced into an eDiscovery system so that voice can be used alongside other text related to the matter such as email or IM chats for fast review.

In addition to the options for ingestion/production detailed above – Text, Email, Dat and Standalone JumpTo™ Review Player – Intelligent Voice® also offers a fully featured API to allow deeper integration with current platforms, as well as additional export options of JSON and XML.

Relativity Integration

As well as a traditional “workflow” route using pre-culled data in a .DAT file to upload into Relativity, Intelligent Voice now offers a Relativity plugin, so that audio data held in Relativity can be converted to text natively.

Deployment

Intelligent Voice is deployed as an appliance – a server with all the necessary software already installed – and as such is simple to implement, and platform agnostic. Deployment can be on premise or in the cloud (e.g. AWS or Azure)
Training is measured in hours not days. Depending on the user base, no formal training may be required at all.

8.2.38 Inventus software suite

Inventus leverages a variety of technology solutions to reduce the overall cost of litigation and to provide budget predictability on projects. Clients have access to our comprehensive suite of technology and analytics tools which include both internally developed solutions and partner technology.

Spotlight - [https://www.inventus.com/spotlight](https://www.inventus.com/spotlight)
Relativity - [https://www.relativity.com/customers/inventus-platform/](https://www.relativity.com/customers/inventus-platform/)
Venio - [https://www.veniosystems.com/trusted_clients/inventus/](https://www.veniosystems.com/trusted_clients/inventus/)

**Spotlight**: [https://www.uk.inventus.com/spotlight](https://www.uk.inventus.com/spotlight)

Spotlight is a business data analytics dashboard that provides full visibility into all of your key metrics including data spend, ROI and reviewer statistics. Users have immediate access to any structured data set, such as e-billing, data volume or matter detail. Spotlight provides you with fully customizable and intuitive dashboards to assist in managing department functions, giving you valuable information to improve the decision making process.

**Key Features:**

- Instantly see key metrics, volumes and benchmarks on your own data in real-time. In addition to your own data, you now have the ability to measure and quantify outside counsel efficiency.

- Live access to all the key metrics in a document review gives Spotlight users the ability to take control over the costly review process. In addition, by mapping data visually, Spotlight can also help identify gaps in data sets based on chronology or help spot missing custodian data.

- Data is presented in fully customizable charts and graphs, preparation of budgets, benchmarks and executive level presentations now takes only minutes.

8.2.40 KLDiscovery Software Suite

Nebula is an end-to-end eDiscovery solution that facilitates smarter ways to cull, process, review and manage documents while creating substantial time and cost savings. Now available in the cloud, Nebula gives you all the versatility you need for processing, review, analysis and production of your data.

Designed with the user experience in mind, Nebula offers a more modern and user-friendly approach than other review tools that can be overwhelming to administer and navigate. The web-based application is also accessible from all modern browsers. Advanced processing capabilities streamline review with the assistance of email threading, optical character recognition and near-duplicate analytics. Native review options also give you the ability to eliminate the time-intensive conversion of data into TIFF images, including CAD drawings.

Nebula can be hosted within the Microsoft Azure cloud, offering scalability and rapid deployment to meet your unique needs. Azure provides a comprehensive set of security capabilities, including role-based access, virtual environments, network access controls and data encryption. In international matters, data can be processed and hosted in one country and accessed in another. Alternatively, Nebula can be hosted in our state-of-the-art ISO 27001-certified data centres that are designed to provide the highest levels of performance, data protection and fault tolerance. Regardless of your preference, we take care of the infrastructure, so you can focus on your case.
Nebula features KLDiscovery’s suite of unique and proprietary applications:

**Predictive Coding**

Award-winning, patented technology that leverages human expertise to drive results. Predictive Coding with Continuous Active Learning combines user decisions and random sampling to immediately and continuously prioritize important documents for review. Quality Control and Sampling monitors the effectiveness of document categorizations to arrive at the necessary confidence levels to ensure defensibility.

**A/V Suite**

Winner of a Relativity Innovation Award for Best Service Provider Solution and People’s Choice, A/V Suite simplifies the review of multimedia files. Visualise audio files and have total playback control. Easily redact and produce audio files – something no other review platform can provide.

**Workflow**

Automate the routing and distribution of documents to streamline document review and maximise accuracy and defensibility.

**AutoRedaction**

Protect sensitive information and streamline the redaction process with an automated approach. Greatly reduce the burden of redacting documents by automatically finding and redacting personally identifiable information, privileged content and other sensitive information.

**Native Spreadsheet Redaction**

Redact content from Microsoft Excel and other spreadsheet files without the need to convert to TIFF. Options for redactions include removal of rows, columns, worksheets, formulas, cells and standard text redactions. Pristine copies of the original files always remain intact.

**KLD Analytics**

With Email threading and Near-duplicates text analytics, you can identify the most content-inclusive messages to avoid redundant review and group similar records for a quicker review.
Measuring roughly the size of a briefcase, NPC is a portable tool that allows powerful processing, filtering and analysis without the need to transfer data outside the company or across borders.

Conduct covert, full-scale investigative work with NPC without removing data from an organisation or country. Highly sensitive data stays secure and no connection outside the company firewall is required. Remote support requires manual authorisation before KLDiscovery has access to the environment.

NPC is small enough to carry on commercial flights, allowing for quick and flexible deployment. Our on-site solution is backed by the expertise of KLDiscovery's forensic investigators, eDiscovery consultants and case managers who are familiar with local laws, languages and cultural considerations.

Designed to be a self-sufficient, full featured processing engine through review and productions, NPC supports multiple concurrent reviews as well as high-volume processing requirements. NPC offers a repository and matter-specific review platform where data can go to the repository for preservation/searching/ECA and also directly to a designated review database.
We have incorporated our proprietary predictive coding functionality and powerful analytical tools into our Relativity offering to ensure all our clients’ specific needs are addressed. All our Relativity projects are supported by a dedicated team of experts with the necessary experience and a range of Relativity certifications to help you get the most from Relativity. We also offer Relativity as an onsite solution.

Relativity features KLDiscovey’s full suite of unique and proprietary applications:

**Predictive Coding**

Award-winning, patented technology that leverages human expertise to drive results. Predictive Coding with Continuous Active Learning combines user decisions and random sampling to immediately and continuously prioritize important documents for review. Quality Control and Sampling monitors the effectiveness of document categorizations to arrive at the necessary confidence levels to ensure defensibility.

**A/V Suite**

Winner of a Relativity Innovation Award for Best Service Provider Solution and People’s Choice, A/V Suite simplifies the review of multimedia files. Visualise audio files and have total playback control. Easily redact and produce audio files – something no other review platform can provide.

**Workflow**

Automate the routing and distribution of documents to streamline document review and maximise accuracy and defensibility.

**AutoRedaction**

Protect sensitive information and streamline the redaction process with an automated approach. Greatly reduce the burden of redacting documents by automatically finding and redacting personally identifiable information, privileged content and other sensitive information in a Relativity workspace.

**Native Spreadsheet Redaction**

Redact content from Microsoft Excel and other spreadsheet files without the need to convert to TIFF. Options for redactions include removal of rows, columns, worksheets, formulas, cells and standard text redactions. Pristine copies of the original files always remain intact.

**KLD Analytics**

With Email threading and Near-duplicates text analytics, you can identify the most content-inclusive messages to avoid redundant
review and group similar records for a quicker review.

**PrivLog Builder®**

Utilise an integrated suite of tools with advanced functionality to effectively build privilege logs. With automated privilege log features, name standardisation and full compatibility with the most popular review platforms, you save time and produce remarkable results.

**MultiMatter Management**

Easily and defensibly reuse lawyer work product across matters, resolve coding inconsistencies in real time, and minimise the risk of inadvertent production of privileged and protected content.
EDR

EDR is a proprietary review platform built by KLDiscovery and incorporating many of the groundbreaking KLD enhancements which have subsequently been built into Nebula and our version of Relativity. EDR has been built from the ground up by KLDiscovery meaning that we have been able to custom develop it to meet out clients’ requirements, and some of our clients have now been using it on projects for more than a decade. Whether utilising the industry’s most powerful predictive coding technology, and automated workflow, EDR delivers powerful and accurate results through a simple and non-technical interface.

EDR enables you to utilise:

- Industry-leading predictive coding, utilizing a proprietary algorithm for Continuous Active Review. The major benefit of KLDiscovery predictive coding is not only the advanced nature of its algorithm, but also the extent of its integration into our platforms and automated workflow. This enables true Continuous Active Learning; learning sessions run automatically every 4 hours, or a session can be initiated manually at any time.

- Automated workflow enables case managers to work with you at the outset of a project to set up a workflow which automatically batches documents to specific review teams. This works especially well with prioritisation from our predictive coding, automatically updating and batching priority documents to reviewers in real time.

- Language identification and in-platform machine translation without needing to remove data into a separate software tool. This enables you not only to identify documents in different languages but also to view the original document alongside the translated text.

- Phonetic search and review of audio files, enabling you to find relevant information even when it is hidden in audio content such as recorded voicemails or recorded microphone feeds.

- Analytics including visual communication analysis (see above), email threading and near-duplicate identification and analysis included as standard.

8.2.41 KNOVOS Software eZReview

eZReview: eDiscovery Made Easy

eZReview, Knovos’ holistic eDiscovery platform, enables insightful early case assessment, powerful processing and production, and simplified document review and analysis. eZReview is powered by Knovos’ advanced analytics engine, which enables multidimensional data analysis and technology-assisted review (TAR).

Solution Benefits

➢ All-in-one eDiscovery platform
➢ Capable of ingesting hundreds of file types, including structured and unstructured data
➢ Intuitive, easy-to-use interface enables strategic document analysis, prioritization, and identification
➢ With TAR, document review is now much quicker, optimizing the entire eDiscovery process

Early Case Assessment

✓ Advanced filtering techniques
✓ Multidimensional analytics
✓ Multi-matter knowledge repository
✓ In-depth content analysis
✓ Instant data visualization
✓ Project cost estimates and budget reporting

Processing and Production

✓ Wide multilingual support
✓ Flat file processing
✓ Processing of multiple data types
✓ Global and matter-level dashboards
✓ Standardized load templates
✓ Process visualization
✓ Complex processing algorithms
✓ Structured and unstructured data handling

Document Review
✓ Inclusive redaction and annotation capabilities
✓ Two-factor authentication
✓ Customized review workflows
✓ Robust searching capabilities
✓ TAR, with continuous active learning (CAL)
✓ Role-based user access
✓ Privilege log management

8.2.42 KOFAX Capture

Kofax Capture automates and accelerates business processes by capturing all types of paper and electronic documents and forms, transforming them into accurate and actionable information, and delivering it all into your core business applications, processes and workflows. Whether your information is on paper or in electronic files, parked at a central office or scattered on desktops and remote offices throughout the world, Kofax Capture can help you handle it all.

Offering unmatched scalability, Kofax Capture is a powerful, enterprise ready, production level capture platform. It captures information from virtually any source: scanner, multi-function printer, print stream, email, fax, web service or folder. It automates capture driven processes at the perimeter of the organization or wherever documents are received, regardless of the location, source, language or type.

No matter what hardware or enterprise applications you choose now or in the future, you can count on Kofax Capture to ensure consistent document capture, indexing and validation of your important information.

8.2.43 Law PreDiscovery

Law PreDiscovery software combines production-level imaging and electronic discovery processing in one powerful, easy-to-use application that also includes the following functionality:

- Load electronic documents and mail stores, scan paper documents, and import TIFF images and load files,
- Extract text and metadata for other database applications,
- Process e-documents, mail stores, file lists and Microsoft Outlook folders simultaneously,
- Perform de-duplication and culling to process and review only responsive data,
- Use enhanced filtering capabilities for faster, more effective searching and culling.

8.2.44 Lighthouse Technology Solutions

**Lighthouse Spectra**

Spectra is Lighthouse’s powerful cloud-based, user-driven information retrieval, analysis and management platform or ediscovery and compliance teams. Spectra is ideal for internal investigations and smaller matters where in-house experts are self-sufficient and want access to industry-best tools and capabilities and expert resources available to support and supplement them, as needed. Combining Lighthouse’s innovative technology with the processing power of Nuix, the document review capabilities of Relativity, and the imaging finesse of Ipro, Spectra delivers a powerful, scalable, and user-friendly experience. Spectra is deployed in the cloud, providing a scalable, highly available, and secure environment for mission-critical operations.

**Lighthouse SmartSeries**

Lighthouse SmartSeries is a proprietary suite of technologies and customized workflows designed to reduce your overall eDiscovery cost, risk, and review time, while improving your review team’s consistency. They are optimized for Relativity so reviewing attorneys can work efficiently in a familiar environment. Now that’s smart.

**ChatSmart**

ChatSmart sets the SmartSeries apart with its unique ability to provide rapid, efficient, and complete review of chat data in many formats, from multiple sources. It combines unmatched innovation, and deep understanding of the particular challenges associated with chat messaging to deliver the only solution you will want to rely on for review of instant message, cell phone, and chat communications.

**RedactSmart**

RedactSmart enhances the SmartSeries by increasing the speed and consistency with which redactions are applied, using programmable pattern recognition to complete hundreds of redactions in minutes.

**ReviewSmart**

ReviewSmart rounds out the SmartSeries by providing the rapid and efficient disposition of duplicate documents that survive initial family-level deduplication. ReviewSmart analyses a user-defined data set, identifies all document-level duplicates within, and bundles them into unique groups, allowing a single document from each duplicate group to be reviewed and redacted with this coding propagated to its duplicates. Importantly, ReviewSmart can then analyze these duplicates and their families to identify and alert the user to coding inconsistencies that may require attention.

8.2.45 LitSavant Conformity Engine

The LitSavant Conformity Engine is a Relativity® application which enables Project Managers to design and implement validation rules and other logical processes which are then enforced during data entry.

This works by allowing the user to specify what they want the software to do and the conditions that need to be fulfilled in order for the software to do it.

Here are 5 easy examples illustrating how these rules can be used and why they are very useful in increasing accuracy and reducing costs:

**Example 1 – Alert the user when they get it wrong**

This is the commonest scenario and results in an onscreen message when the user codes something in a way that doesn’t meet predefined rules.

![Image of LitSavant Conformity Engine interface]

**Example 2 – Log mistakes (when users get it wrong)**

When a user makes a mistake (such as coding a document both “Hot” and also “Not Relevant” as per the example above), in addition to alerting them so that they correct the error, we can also log the mistake. The mistakes can then be analysed to identify recurring themes for corrective action etc.
Example 3 – Send an email when hot documents are found
This example is pretty self-explanatory - when a user identifies and codes a document as hot for the first time, the software can send a customised notification email to specified users. The email could include information about the user who tagged the document as hot, any comments that they made and any additional coding from the document.

Example 4 – Update the “Last Coded By” field
It’s not uncommon to want to know who reviewed a document during a particular review round. The software can update a “Coded By” field – saving the user from having to enter this information.

Example 5 – Update a “Family Privilege” field based on “Privilege” coding
Relativity propagation is a pretty blunt instrument in that the last coding decision on a family member is applied to all members of the family. If we want to know whether a family contains a privileged (or part privileged) document, standard Relativity propagation doesn’t really do the job.

Instead we can create a custom action to use “Intelligent” propagation. With this approach, users code the “Privilege Status” of each document and the software then updates a field for all members of each family based on that coding to indicate if they are members of a Privileged, Part Privileged or Not Privileged family.

Detail
The examples above illustrate the 5 functions that the software can perform as part of the coding process. These functions are:

- Show an onscreen message
- Create a new instance of an object
- Send an email
- Update a field
- Execute a Relativity script

One or more of these functions can be triggered when the specified conditions are met. Each of these functions is customisable and can be triggered by one or a combination of conditions. The conditions themselves are also fully customisable.

Whilst all of the examples relate to coding documents, these functions are available on all custom objects as well.

Each of the functions above could be created by a programmer in code and deployed via an Event Handler. The innovation in the LitSavant Conformity Engine is that Relativity’s standard interface is used to enter the rules – no programming knowledge is required and so the rules can be created, tested and deployed in minutes. And
because the LitSavant Conformity Engine saves your rules into your Relativity database when it is time to upgrade Relativity, you simply update the application as part of the upgrade process. If you were using Event Handlers you would need your programmers to manually rewrite and redeploy each of your Event Handlers in all of your databases.

The LitSavant Conformity Engine supports Relativity Server versions 9 and above (up to and including the current version) and RelativityOne. It is licenced on an annual basis and is available to anyone with their own Relativity environment.

8.2.47 Logikcull

Logikcull provides end-to-end cloud-based discovery software that is completely proprietary and updated daily by its team of engineers. Logikcull’s software is designed to be powerfully simple such that anyone, anywhere, on any device can begin a discovery matter in minutes and at a moment’s notice. Logikcull automates 90% of the processes associated with data ingestion, processing, search, review and production, so that there is no need to rely on high-priced vendors or technicians -- and no extensive training or onboarding.

To get started, you simply drag and drop your data and documents into Logikcull, where they are automatically indexed (text and metadata), preserved, OCR’d, imaged, de-duped, de-nisted, threaded and grouped by family, and organized for easy review. Logikcull will also automatically flag any documents that may be problematic or important, such as potentially privileged data, documents that are password protected, or documents that have documents embedded within them.

From there, you can run searches; tag, redact and share documents; and leverage Logikcull’s proprietary Culling Intelligence for early case assessment and document culling. Saved searches can then be quickly exported or produced in any format with Bates stamping in a few clicks. Logikcull also provides 24/7/365 in-app support at no additional cost, and encrypts all data in transit and at rest -- a step few vendor competitors take.

Perfectly predictable and transparent pricing is available at Logikcull.com/pricing. To get started or sign up for a free account, go to app.logikcull.com/signup.

8.2.48 **Luminance Discovery**

Unique features of Luminance Discovery include:

- 3D visualisations of their entire dataset, represented as a document cloud generated from a number of parameters including date and conceptual similarity. Users can zoom, click and manipulate the graphic renderings of their documents in order to quickly grasp an overview of the data in their case and explore what is relevant to them and even identify conceptually similar documents in one click.

- Search Term Analyser enabling legal professionals to optimise search terms by quickly identifying terms that are over or under inclusive.
• Deep Coding, Luminance’s proprietary Technology Assisted Review (Continuous Active Learning) platform – which includes a heat map to confirm that a representative sample of the document set has been reviewed and advanced auto-coding and QC functionality allowing the legal professional to find the optimal balance between speed and quality.

• Luminance Discovery also offers Word-integrated work product functionality. Designed to blend seamlessly within legal professionals’ existing patterns of work, Luminance users can automatically hyperlink all production references contained within a Word document. This ‘live’ document can be then sent out to any relevant person who can instantly access the document in question just be clicking the hyperlinked reference in the Word document.
Key Differentiators:

- Zero set up time making Luminance applicable to projects of all sizes – not just the big ones – such as DSAR requests
- The industry’s most advanced AI platform enabling unprecedented levels of culling and analytics – all for one low rate with no surprise fees
- User training in as little as one hour (no special certifications required), allowing a wider range of professionals to use the system and reducing reliance on costly third parties and consultants

8.2.49 Magnum

Opus 2 Magnum is a secure web-based service that allows your team to access, annotate and collaborate on any legal content. Transcripts and documents, including hyperlinked pleadings/witness statements/skeleton arguments, web research or entire trial bundles are securely hosted within a simple interface which allows users to annotate and easily share comments with team members (barristers, solicitors, experts).

Opus 2 Magnum is an indispensable tool for trial preparation, providing significant cost benefits and giving your whole team access to one central workspace, from the office or remotely from any location with an internet connection, thereby eliminating the need to print and regularly update expensive hard copy sets.

**Core Functionality**

- Hosting of key documents/trial bundles and access online from anywhere
- Annotation of documents. Collaborate across the key materials with your wider team
- Hyperlinked documents: Transcripts to bundle references; Witness Statements to exhibits; Opening/ Closing Submissions to supporting material
- Create your own ‘Custom Bundles’ from the documents in the case
- Ability to capture and annotate your web research

**Advanced Transcript Features**

- Access your transcript from anywhere, using any device
- Annotate and share notes made in LiveNote securely with your team
- Listen to synchronized audio of the hearing
- Simple filtering system to review your team’s notes and annotations

**Lawyers Choose Opus 2 Magnum**

“The Opus 2 Magnum system enables instant access electronically to all the documents in the case. We’ve now reached the closing submissions stage where the system pays big dividends because the written closings can be researched, cut, pasted and finalised from the screen. I suspect that this is how all major litigation will, in the future, be conducted. I would say this is the most important development in trial work I’ve ever experienced in my time at the Bar.” - Lord Grabiner, QC, One Essex Court

**Judges Choose Opus 2 Magnum**

“[Opus 2 Magnum] enabled the trial to be concluded within the allotted timetable, and with the maximum efficiency. It also provided the inestimable advantage, from my perspective, of being able to access my notes made during trial, and the full galaxy of the trial bundles, from wherever I was and at whatever time of day (or night).” - Gloster J in her judgment on Berezovsky v Abramovich

8.2.50 MedBrief

MedBrief facilitates the secure transfer and review of patient medical records, confidential documents and radiology. It is not an eDiscovery product but can provide significant value when deployed in conjunction with such products, particularly when used in the context of Expert or Counsel review.

Designed for use by both lawyers and medical experts the system can present indexed medical records, confidential documents and radiology all through a single webpage without the need to install any software. It is currently being used in over 8,000 clinical negligence and personal injury matters for firms across the UK together with a number of international mass tort and product recall cases for international clients.

MedBrief will solves many of the issues we all experience in respect of radiology distribution. We will no longer need to send you USBs, file-share links or downloads. Over 6,000 experts, lawyers and barristers are now using MedBrief to review medical imagery. Its latest version is a CE certified viewer accessible from any internet browser and works on PC’s, Macs, android tablets and iPads.

MedBrief does not have any local server requirement and as such can be deployed and supported at short-notice into new jurisdictions, beyond a web-browser there is no client side installation.

Please get in contact with us and we’ll explain more about what we do and how we might be able to assist you.

8.2.51 Millnet DocBuster

**eDocBuster** is developed by Millnet, the UK’s leading provider of legal document services to law firms.

DocBuster is an integral part of Millnet’s 24/7 document operation, and is used by businesses across the UK. DocBuster makes it easy for law firms to batch print documents such as emails and their attachments, and common file types including Word, Excel and PDF. DocBuster is tried and tested technology, used within leading UK law firms. Millnet has printed in excess of 100 million pages of emails, MS Office documents (Word, Excel, PowerPoint), PDFs and other file types with the program over the past 10 years. DocBuster is easy to install, requiring little or no IT involvement.

**DocBuster is designed to be**
- Easy to Use.
- Powerful.
- Cost Effective.

**Main Features**
- Page count reporting.
- Identifies password protected and corrupted files.
- Chronological ordering of emails.
- Formatting of Excel spread sheets.
- Page capping on large documents.
- Detailed slip sheets, making it easier to identify a documents origin.
- Plus many other features that will assist lawyers in their day-to-day work requirements.
- UK based support, DocBuster is backed up by the largest outsourced secure 24/7 legal document production facility in the UK.

8.2.52 Milyli Relativity product suite

BLACKOUT BY MILYLI

Blackout, a Milyli product, is the easiest, most comprehensive way to redact information in Relativity.

Blackout can automatically redact and mark up native Excel content and image files in Relativity. With Blackout, a review team can create rules and then apply them against a document set to redact documents at high-speed and high volume.

Benefits of Blackout:

- Cut time and costs out of reviews with automated redactions
- Create efficiencies that reduce human error by redacting words, phrases, and text patterns simultaneously
- Ensure privileged information is secure while retaining native documents

How Does Blackout Work?

Features of Blackout:

- Auto-redact images and native Excel files
- Seamlessly integrated into the Relativity viewer
- Quality check with approval, reject, and override options
- Mass import/export functions via .CSV file

Learn and see more at: https://www.milyli.com/blackout
Broadcast, a Milyli product, allows Relativity users to report across workspaces and clients—without ever leaving the Relativity platform.

Users are able to choose from a range of charts and graphs to create detailed, attractive reports on all of your eDiscovery data, then share them easily with stakeholders, review teams, and clients to improve the quality of reviews.

**Benefits of Broadcast:**

- Save time with more efficient reporting than what’s native to Relativity
- Create aesthetically pleasing, easy-to-understand reports for any stakeholder group
- Surface insights that can be used to improve workflows, individual reviewer performance, and more

**How Does Broadcast Work?**

**Features of Broadcast:**

- Customize dashboards with drag-and-drop functionality for tables, bar charts, line graphs, pie charts, and more
- Create multiple dashboards with permissions based on user groups
- Build custom SQL reports or have Milyli's success team set up dashboards
- Add branding, links, or messages to reports via an HTML widget

Learn and see more at: [https://www.milyli.com/broadcast](https://www.milyli.com/broadcast)
Chapter 8 – Supplier & Software Details

CHRONICLE BY MLYLI

Chronicle, a Milyli product, is the easiest way to build privilege logs in Relativity. Chronicle starts constructing a privilege log as soon as the underlying documents enter review. Using templates that recognize both Relativity fields and dynamic custom fields, Chronicle is able to concatenate information and immediately reflect coding decisions and update as changes are made. This not only simplifies and streamlines the process of assembling a privilege log, but it also allows viewers to view and revise in real time.

Build a consistent, defensible narrative while reducing the expense and time it takes to construct a privilege log.

Benefits of Chronicle:

- Simplify the creation, review, and delivery of privilege logs in a way that also saves time and effort
- Create consistent, clear, and complex narratives
- Automatically include documents tagged as privileged in real time
- Make changes rapidly without impact on the final delivery timetable

How Does Chronicle Work?

1. Start with an agreement to the terms of privilege.
2. Set up templates, which recognize both Relativity fields and dynamic custom fields.
3. Conduct review as information then populates on the Chronicle dashboard (exported as a .CSV).

Features of Chronicle:

- Template builder allows full control over the customization of the log
- Able to concatenate multiple document fields with plain text
- Uses Relativity saved searches to immediately recognize privileged documents
- Flags privileged docs not identified for the final Priv log output
• Easily exports privilege log .CSV file

Learn and see more at: https://www.milyli.com/chronicle

DELEGATE BY MILYLI

Delegate, a Milyli product, empowers legal professionals to get more from their Relativity investment while completely and safely preserving confidential information.

As a robust administration tool, Delegate allows Relativity hosts to create user and group level access settings for specific workspaces and matters—all within the same instance.

**Benefits of Delegate:**

• Equip end clients to better help themselves conduct reviews with more versatile permission settings

• Regain time spent managing and executing those requests and refocus on relationship-building customer service efforts

• Create users faster without compromising security in similar templates to those native to Relativity

**How Does Delegate Work?**

<table>
<thead>
<tr>
<th>Collect Users with Access</th>
<th>Identify Users for Admin Priv</th>
<th>New Admin Manages</th>
</tr>
</thead>
</table>

**Features of Delegate:**

• Seamlessly integrates with Relativity

• Offers templated user configurations and mass imports of users

• Accessible on mobile devices for on-the-go admin tasks

• Supports more thorough and granular auditing of reviews

8.2.53 Mindseye TunnelVision

Mindseye TunnelVision is a leading third party platform for the processing of electronic data during legal proceedings. TunnelVision provides powerful data assessment, interactive filtering and native processing.

Simple, Workflow-based Navigation

TunnelVision was designed with a clean, straightforward, easy-to-use interface. And because TunnelVision is organized based on workflow, how you use it maps to steps in the process – it has built-in stop-points around key quality control or decision points.

Comprehensive – and Easy – Reporting that Tells a Story

Reporting is a critical function, but one that often falls short of real-world needs. TunnelVision excels at delivering the data you need, when you need it, because it was built with reporting as part of the initial design, not added as an afterthought. And while some systems provide dashboards that focus on the processing project, or even custodians of the data set, TunnelVision delivers detailed reports around the lifecycle of each file and processing step to help you build and share the story of your data. You can create reports based on actions you’ve performed in the application – giving you the ability to view the story from multiple perspectives, as broad or granular as you wish. And you can generate and export reports right through the TunnelVision interface – no back-end, manual database queries required.

Clear Exception Reporting and Handling

When it comes to eDiscovery, unknowns represent big risks. And if you can’t account for everything in your data set, your unknowns – and your risks – increase. TunnelVision tracks every file you enter into the system and documents whether it’s filtered, is an exception, or has been exported. Not only does TunnelVision report on exceptions, it also lets you know when there is a processing issue and gives you additional details to support defensibility.

TunnelVision provides:

- Simple and intuitive web-based design created to support any level of user with minimal training, anywhere.
- Rapid native processing quickly makes data discoverable.
- Powerful and transparent search features enable drill down results to see all variations, sampling to validate precision, and flexibility to refine as necessary.
- Extensive metadata filtering and analysis features assist in prioritizing what to look at and when.
- Flexible investigative and analysis tools enable better insight into any data identified.
- 30+ report formats enable users to save all work product and details to several formats including PDF, Excel, Word, and many more.
- Fast export of targeted data and work product to downstream review.

8.2.54 **MM/PC**

MM/PC, written and wholly owned by Insurgo, is used around the world by corporations, Law Firms, Service Providers, eDiscovery Vendors, Law Enforcement bodies and Government Agencies to provide tape services.

MM/PC restores data from tapes of any type, created using any backup software. eMag also utilises original (native) systems such as Netbackup, Arcserve, Tivoli etc. and other specialist tape utilities to supplement services.

A wide range of voice recording systems is also fully supported by MM/PC, quickly and cost effectively providing an index to calls stored on tape and providing the ability to select and review those calls.

8.2.55 Morae Software Suite

Audio.IQ

Audio.IQ is Morae Global’s audio eDiscovery, monitoring, and compliance tool. [https://www.moraeglobal.com/audioiq/](https://www.moraeglobal.com/audioiq/). Audio.IQ is our proprietary audio platform developed in partnership with CallMiner, the industry leader in speech analytics.

During audio processing, the platform decompresses and enriches the data, capturing a wealth of data for each file including searchable text transcripts and metadata. Speech analytics goes beyond speech recognition, converting speech into structured text and meaningful units of data. The platform allows our audio experts to group calls by data characteristics and qualities.

In the context of eDiscovery, the audio solution is a fully managed service and, unlike other product offerings, Clutch provides a dedicated team of industry professionals to manage workflows, review teams, and progress, to report findings, and to conduct audio productions on time and to specification.

The two additional use cases for Audio.IQ are proactive monitoring or business function analytics and sales compliance. Call scoring, using data characteristics to rate calls based on criteria provided by the business, allow for prioritization or immediate escalation of calls for compliance assessment.

Capture.IQ

Capture.IQ, a revolutionary contract analytics platform designed to help our clients dig deeper into their contract data. [https://www.moraeglobal.com/captureiq/](https://www.moraeglobal.com/captureiq/) A fully-managed service, Capture.IQ extracts and codifies key reference data within all forms of legal and financial agreements allowing firms to easily access and make sense of their internal data.

Capture.IQ manages the entire financial and legal agreement life cycle by automating the capture and reconciliation of key reference data. The data extracted is subsequently reviewed and validated by our team of contract analytics experts. This process enables us to efficiently reconcile inaccurate, inconsistent or flawed reference data and to return accurate and fully validated data.

Additional use cases for Capture.IQ include the control of and regular surveillance over ISDA agreements, financial derivative term sheets, issuance documents and trade data; and the implementation and continuous monitoring of GDPR change management programmes and their ongoing GDPR compliance. The user-friendly platform offers easy and repeatable ways to identify and protect Personally Identifiable Information (PII) for GDPR purposes and it can be customised to reflect your GDPR implementation workflow.

ClutchCumulus

In our digital age, the cloud has changed everything. By 2020, 92 percent of all data centre traffic will be in the cloud and that’s not by accident. Cloud-based platforms deliver superior scalability, improved data security and unmatched power.

[https://www.moraeglobal.com/ecumulus/](https://www.moraeglobal.com/ecumulus/)

Cloud-based eDiscovery on the RelativityOne platform with secure processing, review, hosting and production by CLUTCH.

Deploying in the cloud allows us to deliver our state-of-the-art eDiscovery and global document review solutions – previously only available to the world’s largest and most sophisticated financial institutions – on any and all eDiscovery projects, no matter the size or complexity.

Simple, fast, predictable eDiscovery at an unbeatable price – we call it ClutchCumulus.

ClutchCumulus transforms the way eDiscovery is delivered. No other eDiscovery...
service offers so much.

8.2.56 Nexidia

The growth of electronic communications including voicemail, call-centre recordings, regulatory compliance, and digital conferences, has resulted in increased volumes of discoverable audio content. Searching these recorded audio and video files presents significant issues for legal professionals, corporate compliance managers, and government regulators. Nexidia has focused on audio and video content for over a decade and brings unparalleled experience and technology to your team.

Nexidia’s Audio Discovery technology uncovers relevant information and solves the considerable challenges of audio search and review by:

- Quickly locating relevant content - helping legal professionals understand the nature of the evidence.
- Significantly reducing the cost of audio review by allowing reviewers to quickly pin-point searches and deliver relevant data.
- Complementing and incorporating traditional electronic document discovery.

Nexidia enables law firms, corporate legal departments, and regulators to locate critical evidence in the shortest time, with the highest accuracy, and at the most affordable price. Nexidia’s patented audio search technology increases the speed and accuracy of searches against large collections of audio content by eliminating the need to convert speech to text. Organizations can now review and search large amounts of unstructured content in a matter of days, rather than months, significantly reducing total project costs and making short deadlines achievable.

Audio Discovery

Nexidia is the fastest and only scalable audio discovery solution that combines technology, audio expertise, and the highest levels of project management. Traditionally, law firms and electronic discovery companies have relied on manual transcription or human listening to review and investigate audio files. However, transcription is slow and costly, and human listening is an ineffective process for locating relevant content. Neither transcription nor human listening is scalable or capable of economically handling the large amounts of audio data being demanded and produced today.

Automating the review process eliminates the errors caused by fatigue, boredom and other distractions that typically result from human listening. Nexidia’s technology returns highly accurate results regardless of audio quality, speaker accents, dialects, slang, and non-standard grammatical patterns.

Nexidia’s audio discovery consultants work every day with highly sensitive content. They know that processing audio discovery is different from other forms of electronic information and work closely with reviewers to maximize productivity, workflow, and achieve the best possible result.

Compliance and Corporate Governance

Whether required by a regulatory agency or internal policy, corporations are creating and storing significant volumes of audio and video files. Nexidia allows counsel and corporate officers to proactively monitor and quickly identify audio content for discovery, internal, or regulatory investigations. This flexible platform significantly speeds the legal review process by allowing counsel to organize and effectively search all recorded content and pertinent data, including metadata.

Nexidia Forensic Search

Whether your challenge is legal discovery, corporate compliance, or governance, Nexidia Forensic Search offers tremendous flexibility and speed, indexing recorded audio up to 20,000 hours per day. This makes large volumes of audio available in just
Chapter 8 – Supplier & Software Details

a matter of days for search, automated analysis, in-depth review, and targeted listening.

As a result of its patented phonetic technology and approach, Nexidia:

- Provides better ROI by creating a more thorough approach, at a fraction of the costs of traditional methods of transcription or human listening.
- Quickly and accurately allows legal professionals to identify, prioritize, and review relevant data and respond to short deadlines.
- Enables compliance and corporate officers to identify subject matter, conduct preliminary searches, and prioritize the most relevant records for listening.
- Provides a disciplined framework to review audio files for privilege, responsiveness, and other issues.
- Reduces judgment errors caused by fatigue, and provides an accurate assessment of critical content.
- Gives users an easy-to-use interface enabling quick, efficient ad-hoc searches and drill-down into specific content - even proper names, jargon, and specialized industry terms.
- Allows users to continue using their preferred platform for non-audio/video processing and review.

8.2.57 **NightOwl Discovery Software Suite**

For data collection, NightOwl uses the latest technology including but not limited to EnCase®, AccessData®, Exterro® and Cellebrite®.

NightOwl offers Relativity® ECA, Nuix® ECA, LAW® EDA, Veritas® and Brainspace® for ECA. These systems provide what NightOwl refers to as our Data Intelligence module. These tools can be combined in unique and interesting workflows to offer a flexible high-speed search and facet navigation, advanced textual analytics, and intuitive data visualizations all within a single login that is directly connected to the review workspace.

NightOwl processes data using Nuix. Our processing environment at peak performance can process 4.5 TB of data per 24 hours. Average processing rates in a typical real-world application are 125 GB per hour.

NightOwl has been a Relativity Premium Hosting Partner for nine years and has been a “Best in Service” partner for the past eight years. We operate a robust and secure Relativity environment in the US, comprised of both a primary site in Minneapolis and a complete warm backup environment in Chicago. We also operate NightOwl data centers internationally with separate Relativity instances in the US and EU (Dublin, Ireland and Dusseldorf, Germany). Relativity forms the foundation for nearly all of NightOwl’s discovery management engagements. All NightOwl staff hold various Relativity certifications including Relativity Infrastructure Specialist.

To optimize process in Relativity, NightOwl develops automated workflows that force additional or automated actions when coding documents. NightOwl has dedicated staff working with our client teams in developing a wide variety of coding decision “event handlers”. These event handlers generally fall into one of the following four categories: Validation or auto-population of fields based on coding decisions, forcing fields or decisions into a required state when specific criteria is met, sending emails to specified email addresses when specific fields or coding decisions are made, or querying and updating fields and decisions on an automated recurring schedule.

NightOwl has developed proprietary Relativity applications including MissionControl®, which provides clients and internal operations teams with a dedicated administrative and production control module within NightOwl's instances of Relativity. MissionControl was created to track all attributes and data points associated with each client request. MissionControl enables our dedicated group of quality control analysts follow a standard automated process to ensure that each of those 860 data points have passed corresponding quality controls to exceed our high standards for work product.

NightOwl has also developed another proprietary Relativity application that provides our clients the opportunity to reuse work product of individual documents across multiple matters in their portfolio. DecisionCenter® tracks all attorney decisions on documents, finds hash duplicates in other matters within the client's portfolio and provides automated suggestions as to how those documents may be now classified based off of prior decisions. DecisionCenter is regularly used to kick start ECA processes, prioritize document review and provides an additional layer in quality controls on document reviews.

NightOwl's proprietary dashboard application, nSight®, allows users to access reports and review real-time information through secure, online, web-based client dashboard interfaces. nSight® provides clients with graphical visibility into total Relativity hosting storage, total processed data, total users, data breakdown by case, users by case, custodians by case, media by case and task list by case. These data points are arranged in a simple, easy to navigate interface that allows the client to drill down from general information into increasingly more detailed information for each case, media delivery or custodian.
Additionally, NightOwl supports various third-party Relativity add-ons, which provide search and redaction functionality, including regular expressions to locate PII and HIPAA protected PHI, audio/video transcription, native file redaction, and advanced textual analytics.

For analytics, NightOwl employs a sophisticated team of in-house data analysts and TAR specialists. The advanced analytics team holds certifications in Equivio® Zoom, Relativity® Analytics Specialist and Relativity® Assisted Review Specialist, Certified Brainspace® Analyst, Certified Brainspace® Administrator, and is also skilled in the use of a number of advanced data visualizers such as Relativity® ECA. NightOwl uses Relativity® and Brainspace® 6.1 for its analytics and TAR projects, both of which offer TAR 1.0 and TAR 2.0 workflows.

8.2.58 Nuix Discover

**Nuix Discover**

Nuix Discover delivers end-to-end eDiscovery without compromise. Nuix Discover combines the world’s leading eDiscovery processing, review, analytics and predictive coding in one software solution to help you uncover critical details faster and integrate them into your strategy for litigation and regulatory cases. Nuix Discover gives you the processing, analytics, review and automation power you need to master the details of any legal matter, no matter how large, challenging or complex.

**THE NUIX ADVANTAGE**

- Amazingly fast review. Nuix Discover’s intuitive user interface and intelligent automation capabilities allow legal teams to dramatically improve the speed and quality of document review while delivering profound time and cost savings.

- Analytics included. Nuix Discover has a fully integrated analytics suite included in the base licence, so all members of your legal team can use advanced data visualisations and everyday analytics to find key facts and patterns more quickly.

- Built for your business. Nuix Discover helps you manage all your litigation projects using multi-tenancy reporting and tracking; rapid start-up, training and support; and cross-functional eDiscovery workflows that make you more efficient and productive.

**GET STARTED SOONER**

With processing, analysis, review and production fully integrated into Nuix Discover, you can quickly ingest data and start reviewing in minutes – no load files, no exports and a full portfolio of analytics and visualisations.

**FIND THE FACTS FASTER**

Incorporate analytics into your everyday initial and linear review workflows to figure out what’s going on and define your case strategy. Industry-best models for clustering, mapping and graphing distil the whole case into easily understood ‘a-ha’ moments. Nuix Discover’s machine learning capabilities mean every time you make a coding decision, your next review assignment is more relevant.

**BREEZE THROUGH REVIEW**

Escape the repetitive grind of linear review and make faster decisions in a single view. Nuix Discover’s patented user interface uses visual cues and continuous active learning to ensure reviewers can quickly identify relevance and privilege without needing to search for information from hidden windows, tabs or other inefficient UI mechanics.

**CALL THE SHOTS**

Manage the eDiscovery process end to end with full control over your data and workflow, including self-service case set-up and administration. Even for the smallest matters, you get all the analytics, review efficiencies and production capabilities at your fingertips.

**SCALE SEAMLESSLY FROM A SINGLE PST TO 100 MILLION DOCUMENTS**

Nuix Discover is designed for scalability in data volumes and number of users. No matter how big or small the case, you can automate the way information is processed, organised and presented to reduce operational costs and simplify hand-offs.
Chapter 8 – Supplier & Software Details

BETTER PROCESSING = BETTER REVIEW

With Nuix Discover, you don’t have to worry about the other side having better data or surprising you with evidence you’ve never seen. You’ll never miss a shred of evidence using our industry-leading processing, analysis and review capabilities.

FLEXIBLE DEPLOYMENT OPTIONS

Run Nuix Discover where and how you want, in your data centre or the cloud, using on-premise or hosted options. Whichever option you choose, you'll always get access to the latest features, innovations and operational efficiencies.
Nuix Workstation
Process, search and analyse unstructured and high-volume data with unmatched speed and precision.

Understanding data is not getting easier. Growing numbers of evidence sources, file formats, devices, cloud services and storage techniques make the task ever more complicated. Nuix Workstation is the world’s leading technology for extracting intelligence from high-volume unstructured, semi-structured and structured data. It provides unmatched speed, scale and accuracy to processing, searching, indexing and analysing the information you need.

THE NUIX ADVANTAGE

- Get the big picture, fast. Quickly and comprehensively answer the fundamental questions of any matter and make early case assessments with all the facts at your fingertips.

- Mitigate risks. Nuix Workstation delivers a consistent, repeatable and forensically defensible process across each item and data source.

- Empower your experts. We provide insights like no other technology, revealing and contextualising the stories hidden in data.
• **Capture everything.** Nuix Workstation’s efficient and scalable processing turns more than 1,000 file formats and source types into meaningful information, capturing the content, metadata and context of each item.

• **Use one tool for multiple use cases.** Our customers use Nuix Workstation for litigation, forensic investigations, information governance, government oversight, mergers and divestitures, compliance, data and email migrations and regulatory enforcement and response.

**INVESTIGATIONS**

Nuix Workstation helps law enforcement, government and corporate investigators extract, correlate, and contextualise data so you can make fast, accurate decisions. We help you filter out meaningless data and find the key facts.

**LITIGATION**

Nuix Workstation delivers consistent, repeatable and defensible eDiscovery workflows that scale from a single workstation to a global enterprise. You can shorten the time to early case assessment, minimise review and production volumes and uncover connections that strengthen the case.

**INFORMATION GOVERNANCE**

Nuix Workstation provides information transparency into enterprise content so you can mitigate risk, respond to regulations, tackle audit and compliance needs and manage information from creation to disposition or remediation.

**DISCOVERY AND INFORMATION MANAGEMENT SERVICES**

Service providers and advisory firms use Nuix Workstation for client projects that need fast, accurate processing of vast, complex data sources. You can leverage the same software for value-add projects that enable your clients to reduce costs, mitigate risks, improve governance and make better business decisions.

8.2.59 OpenText Discovery Suite (Encase & Axcelerate)

OpenText Encase was acquired by OpenText and now complements Axcelerate’s robust enterprise integrations with the most widely used forensic collection agent, deployed on over 36 million endpoints and counting. The EnCase agent enables legal ops to collect data from laptops, desktops, phones, and more with a lightweight agent. In addition to workstations, laptops, and mobile devices, Encase can also collect and preserve content from on premise data repositories like Microsoft Exchange, Sharepoint, and Lotus Notes or from cloud data repositories like Amazon S3, Box, Google Drive, Dropbox, and Office 365.

![OpenText Encase, collection wizard](image)

Encase can target specific files or capture whole disks, discretely. It can operate in the background and maintain a collection process even when a user goes offline. As soon as they reconnect, the agent resumes and completes the collection. This data is captured in EnCase’s Logical Evidence File (LEF) format, ready for ingestion into Axcelerate or any other review & analysis platform.

OpenText Axcelerate is a complete, end-to-end eDisclosure platform featuring best-in-industry collections, analytics, and Predictive Coding delivered in an unparalleled user experience. From legal hold, to ECA and collection, to analysis, review, and productions, Axcelerate is the trusted choice for premier corporations, law firms, and government entities across the EU and the US.
The OpenText Axcelerate platform includes 2 seamlessly integrated modules:

Axcelerate ECA & Collection tackles early stage/pre-action stage of eDiscovery—identification, preservation, collection, and processing—in a single, highly scalable application. It enables organisations to connect to laptops, desktops, file shares, email servers, and document and records management systems to “explore-in-place” down to the file level, indexing data for search and aggressive culling before collection. Axcelerate crawls and directly ingests native file types from a wide range of cloud and on-premise sources, including Microsoft Office 365, Microsoft Office, Lotus Notes email, web-based email (Gmail, Outlook.com, Yahoo), ‘chat’ communications (Bloomberg, WhatsApp, Slack), and over 400 additional file types, all with automatic language detection.

Axcelerate Review and Analysis empowers legal teams to find the documents that make or break their cases, faster and more reliably. Axcelerate was named “Best eDiscovery Review Platform” by the editors of Legaltech News (June 2015) on the strength of its advanced analytics, best-in-industry Predictive Coding, and consumer-grade user experience.
Axcelerate is delivered self-service to full-service to anywhere in between, as a subscription-based cloud solution, an “on-demand” hosted solution, or an on-premise software solution. Unlike other platforms that depend extensively on third party components and scripting, Axcelerate is a complete solution including self-standing productions, proprietary advanced analytics, and interactive visualisations no other solution has, all built right in:

- **Super-fast search** using various approaches including stem, fuzzy and concept searching to get results fast.
- **Smart Filters** to find the top people, search terms/phrase and data points quickly and easily, no need for complex search strings.
- **Hypergraph** communications mapping for visualised analysis of email and chat data at the sender and domain level.
- **Phrase Extraction** for more sophisticated keyword searching that shows terms in context.
- **End-of-Branch Email Analysis** for easy-to-follow threading and automatic identification of missing messages.
- **Continuous Machine Learning** for flexible, issue-specific Predictive Coding review workflows with superior results and simpler protocols.
- **Concept Browser** for automated categorisation and organisation of unstructured data into conceptually related clusters ready for investigation.
- **Smart Redactions** for automatic reaction of PII, PCI, and other patterns across entire data sets or on-the-fly during review without pre-imaging.
- **Business Intelligence with Efficiency Scoring** for total visibility into discovery processes at a project level and across the entire case portfolio.
Chapter 8 – Supplier & Software Details

Axcelerate is backed by OpenText’s world-class support and professional services teams across the EU and US for training and processing.

8.2.60 Relativity

RelativityOne Overview

Whether it's litigation, information governance, a government request, or an internal investigation, RelativityOne gives you a complete set of flexible tools in a secure cloud platform to tackle your unique challenges through every phase of a project.

Keep Your Data Safe – Centralise your data and reduce risk with a SaaS solution backed by Relativity Trust, a security program that goes far beyond standard data security and privacy certifications. With preventative defense, automated processes, and transparent operations, RelativityOne keeps customers’ most sensitive data protected.

Leverage Cloud Elasticity – Don’t worry about maintaining infrastructure or keeping up performance during peak times – it’s all covered by RelativityOne.

Use a Single Solution – Start and finish e-disclosure in one solution with a single audit trail. No risky data transfers required.

Support e-Disclosure around the World – RelativityOne is available in the US, UK, Hong Kong, Canada, Brazil, and the Netherlands.

Built on Microsoft Azure - Benefit from the scalability, redundancy, and international reach of the Microsoft Azure cloud, as well as the continual investment, innovation, and commitment to security Microsoft puts into it.

Integrate with Microsoft Office 365® - Seamlessly move data from Office 365 to RelativityOne to get your review up and running quickly.

Capabilities

Legal Hold – Fully integrated into Relativity, Legal Hold is a simple solution for a complex enterprise challenge that enables you to create a defensible, repeatable process for managing legal holds. Streamlined and automated workflows mean any team – legal, IT, or HR – can run their unique legal hold processes in Relativity. Additionally, every correspondence can be created from scratch, or built using existing templates, while built-in reports and dashboards provide real-time insight.

Collection – For legal teams and e-discovery professionals who want to quickly and securely get data from the cloud into review, RelativityOne Collection enables you to pull data from Office 365 directly into RelativityOne. With most enterprise data stored in Office 365, Collection makes it seamless and secure to get the most critical data into reviewers’ hands as soon as possible.

Processing – Relativity Processing is tightly integrated into RelativityOne, so you can process and review data without ever leaving the system. An inventory option provides quick insight into your data and allows you to remove irrelevant files based on a date range, sender domain, and other high-level filters prior to fully processing documents for review. Reports, email notifications, and real-time status updates provide complete visibility into your processing job.

ECA & Investigation – Leverage a repository workspace to complete early case assessment and store coding decisions – all at a discounted rate. This workspace helps you streamline the process of understanding and culling data, providing only the functionality required to process collected data in a single searchable workspace, and start applying parameters to identify documents relevant for review.

Review & Productions – RelativityOne allows you to tackle all document review and production challenges, from the smallest to the most complex projects. Everything that you need to move from review to production can be found within a single platform. One of the latest capabilities is short message review. As the way people communicates has shifted toward more texting, instant messaging, collaboration tools, and social
platforms, Relativity has developed the Relativity Short Message Format to help you seamlessly review, analyse, and produce short message data from SMS, MMS, iMessage, Slack, Skype, Bloomberg, and other sources. This provides a holistic view of communications across multiple channels – critical to understanding the entirety of dialogue between individuals involved in a matter.

**Short Message Review**

Analytics & Assisted Review – Relativity Analytics and Assisted Review amplifies your e-disclosure efforts with visual data analytics and machine learning technology. You can bring in analytics at any time in your project, from early case assessment through production. Proven effective by hundreds of organizations and approved by courts across the globe, Relativity Analytics empowers you to investigate and review data faster with the control and flexibility you need to do it accurately and defensibly.

**Active Learning**
Case Strategy – With Case Dynamics, you can manage your case strategy from a single location, alongside your e-disclosure efforts, to stay organized and focus on finding the truth. A complete toolset lets you share findings with your e-disclosure team and adapt your approach as you uncover the facts, making it easy to build your strategy through the entire case lifecycle. The latest capability added to help with case strategy, transcripts, is an application in Relativity to upload, review, and take action on transcripts to better prepare for trial.

8.2.61 Reveal Software

eDiscovery, fast and flexible.

Reveal organises the world’s legal data, making it more accessible, predictable, and affordable for our clients through an end-to-end software application.

We deliver better answers from your data, faster.

Easy-to-use interface reduces time and frustration

Reveal users experience productivity with minimal training on Day One. Visual cues throughout the user interface help you identify and work within the software quickly and easily.

In addition, Reveal is supported directly by its developers, so your support questions and feature requests will always have a direct line to the developers themselves.

Global Footprint

We understand that flexibility is key. Reveal is available to our clients in a SaaS environment, on-premises, or in a hybrid model, depending on your use case.

For those spinning up instances around the globe, our SaaS instances are an ideal solution. We provide the ability to quickly and automatically offload data to secure, less expensive cloud storage, reducing your data storage hosting fees.

Today, we can quickly spin up Reveal instances in 40 countries on six continents, with more data centers in the works.

Features and Services

</table>

- Full-featured production
- Elasticsearch
- Intuitive design
- User-defined workflows
- Assisted review
- Data preview
- Multi-language availability
- Global SaaS infrastructure
- Supported in all major browsers
- Robust API
- Reveal Analytics
- Data locality (GDPR)
- On-premise option
- Activity reporting
- Drag & drop layout
- Column filtering
- Document review

- Near-dupe and de-dupe
- Rapid release dev cycle
- Scalable search functionality
- Rule-based production and QC
- Collaborative review
- User-level permissions
- Matter assignment
- Transcript manager
- Hit reports feature
- Case management
- Intelligence panels
- Filtered views
- Multi-factor authentication
- Document-level security
- Fuzzy search
- Metadata management
- 24/7 support
8.2.62 Servient

Servient – Processing, Analytics, Document Review and Production Platform

Servient is a powerful eDiscovery platform that was designed and architected for the cloud, incorporating the most advanced software available to provide a truly scalable experience.

Built on AWS (Amazon Web Services), users will benefit from the vast scalability, redundancy, and international availability of the AWS cloud, meaning that data can not only be processed in extremely fast time scales, but also within the region in which it was created (very useful for certain projects, and with GDPR in mind).

The Servient dashboard gives quick access to the main aspects of the system:

**Processing** is fast and comprehensive, but designed with ‘self service’ in mind. Users, without any assistance from Servient, can process any amount of data securely. Of course, if you would like some assistance, Servient is glad to help with any processing job.
**Searching** is provided for by both ‘Standard’ and ‘Analytic’ methods

- **Standard** searching & Filtering - Keywords, phrases, date range, format, custodian, boolean etc

- **Analytical** searching – Advanced Technologies such as Continuous Active Learning (Technology Assisted Review / Predictive Coding), concept searching, clustering, email threading
Document Review is easily set up in Servient, whether for small straightforward cases or for multi-level reviews. Batching of documents to the reviewers is automatic, faceting allows for point & click searching, up to the second reporting, and allows the legal team to begin work immediately. The coding/tagging panels are easily modified to fit your matter requirements or customisable to match your internal corporate systems.
**Reporting, Analysis and Productions** are easily managed through a series of easy to use dashboards, allowing your team to quickly see what has taken place during each stage of the review. In addition, Servient has a full slate of Quality Control dashboards that tracks each reviewer, how many documents they have reviewed, and most importantly, how accurate they are.

We then allow the manager to check the documents that the reviewers have coded incorrectly. In addition, Servient provides Sampling Dashboards to validate the quality of the review. The Production template provides easy to follow instructions to allow for the quick completion of your productions.
Chapter 8 – Supplier & Software Details

The Servient system is designed to allow legal reviewers to quickly navigate through the matter documentation, but importantly is also designed to allow team leaders (or litigation support, knowledge lawyer, PSL) to take control of all aspects of the system as required, without the need for long and time-consuming training, giving the legal team full flexibility and control of the matter workflow.

The Servient system is designed to be faster, more accurate and less expensive than any other system on the market

8.2.63 Sightline (From Consilio)

Sightline is a secure, web-based document review platform designed and built by Consilio’s in-house development team to meet the challenges of complex eDisclosure exercises. Sightline is hosted in Consilio data centres across the globe to aid compliance with local data privacy restrictions.

The platform supports both small and large scale document review exercises and offers a range of features designed to simplify and speed up the review process, by as much as 40% (as measured in empirical tests by Consilio)*. Sightline’s automated optimised sorting of records, leverage of analytics, intuitive and customisable review interfaces, and automated workflow-management tools all improve review speeds over other software.

Users have the ability to perform simple or complex searches, create tags and folders, apply redactions, highlights, reviewer remarks and comments to documents, and select groups of documents for review and production. Sightline allows searching and review of electronic documents in any language.

Using dynamic visuals such as widgets, dashboards, timelines and enhanced statistics, review managers can gauge resource requirements, monitor review progress, track reviewer productivity and adjust workflow to meet deadlines - all of which can be automatically sent to selected email addresses as scheduled reports.

Consilio maintains multiple Best in Service Blue™ data centres in Europe.

**Analytics, Artificial Intelligence and Technology Assisted Review**

Provided as standard (at no extra charge) with every matter hosted in Sightline, its advanced analytical technology identifies near-duplicate and conceptually similar documents, generates email threads and communication maps, provides concept searching, clustering and categorisation, and leverages artificial intelligence to enable lawyers to prioritise and review documents more efficiently..

Consilio also offers clients a fully supported predictive coding solution as a cost- and time-efficient alternative to manual human review. The technology can create and optimise multiple predictive coding models concurrently within the same review process, thus allowing more granular and/or issue based review. Each predictive model (tag specific) is independent of any others; thus each document will receive a probability score from each predictive model generated. The technology also handles sets of documents in multiple languages without the need to create separate workflows. Consilio project managers support clients throughout each stage of the predictive coding process ensuring that results are defensible and repeatable.

**Enhanced Audio Review in Sightline**

Sightline fully integrates Nexidia’s world-leading, patented phonetic indexing and search technology to allow the searching, review and redacting of audio files, such as telephone conversations, in the same platform as the rest of the review material. This streamlined one system approach delivers dramatic improvements in accuracy and the opportunity for significant cost reduction.

8.2.64 SPEKTOR Suite

SPEKTOR® Forensic Intelligence

A fully integrated hardware and software solution that enables non-technical first responders and litigation support teams to perform the following tasks quickly and safely:

DATA ACQUISITION

- Collect, forensically preserve & analyses data from computers (PC, MAC, Linux), hard disks, removable media, cell phones, Sat phones, GPS and tablet devices
- Creates forensic images in dd, ENCASE®, FTK®, SMART® formats
- Live incident response including volatile data preservation on Windows (32bit and 64bit)
- Collect from “running” and “powered off” systems. Collect live and deleted data
- Quickly create and store unlimited re-usable collection profiles using our unique 6 step profile wizard.
- Collect data based on file dates, types and/or content using powerful signature analysis
- Allow remote data custodians to preserve their own data using secure collector technology
- Simultaneous collections from an unlimited number of devices
- Everything in one box - all hardware, software, accessories and peripherals are included.

DATA ANALYSIS

- Auto-analysis and easy review of email, images, documents, movies, audio, system registry, browser activity, social media, chat, IRC, volatile network data, recent activity, system users, attached device history, installed software, network configurations.
- Recovers online chat and web browsing account details including passwords, online search term history, file transfers. Reconstructs webpages visited by users.
- Very powerful filtering and sorting using a simple interface – find interesting data faster
- Instant keyword searching: Full indexing of file names, paths, file content and file metadata.
- Instantly locates valid bank card numbers found in any collected data
- Store unlimited keyword lists with unlimited number of keywords
- Search in multiple languages using keyword lists or the onscreen keyboard
- Find known files using unlimited hash values – every collected file is hashed with MD5 & SHA1
- Quickly import and store unlimited numbers of hash lists, each with unlimited number of hashes
o Auto identifies high risk files such as those with incorrect or missing file extensions, encryption, steganography and known indecent images or terrorist materials

o Powerful reporting to PDF or HTML

o Easily export to 3rd party review, visualisation and decision support platforms

SPEKTOR Forensic Intelligence software is supplied with all the required hardware and peripherals in a small rugged hand carry case ready for instant deployment.

SPEKTOR® Drive

The Pocket Forensic Lab™ - The same outstanding capabilities as SPEKTOR® Forensic Intelligence* on a bootable thumb drive that runs on any compatible PC platform, temporarily turning it into a powerful forensic workstation. An invaluable pocket sized incident response tool for compliance, e-discovery and security professionals.

* excludes the mobile phone module

ETL

Commercial in Confidence
8.2.65 StoredIQ for Legal (IBM)

Help eliminate complexity, pain and expense from the eDiscovery process

Highlights

- Notify custodians of legal hold obligations with automated legal holds, alerts and reminders
- Manage custodian interviews/surveys to gain insight into the most relevant custodians and data sources for a matter
- Analyse data in place to gain insight into the scope and merits of a matter before collection
- Reduce downstream review costs by performing early data assessment and culling prior to export
- Automate the legal collection process from more than 100 data sources
- Align IT and legal so they speak the same language about what information needs to be collected, where and by when
- Deliver a repeatable and defensible eDiscovery process

Legal teams must wade through a rising tide of information to discover what is relevant for a specific legal matter. By targeting only the information that is most important, these teams can reduce the cost, risk and time involved in an eDiscovery response. IBM StoredIQ for Legal provides robust management of the eDiscovery process, from hold notification to identification, preservation and collection.

StoredIQ for Legal enables legal teams to efficiently and confidently manage the full matter lifecycle and process compliance for thousands of matters. It allows legal teams to issue custodian hold notices and interviews with automatic follow-ups and escalations, manage preservation and collection activities conducted by IT, and find and analyse unstructured information in place to gain faster insight into data and help ensure only the right information is collected. Legal teams can save time and gain flexibility by not having to move data before analysis. They can take action on data before collection, acquiring insights from data in a matter of hours versus weeks and using that knowledge to make more informed business decisions. Legal teams can also perform both proactive and reactive eDiscovery processes.

Streamline management of the full matter lifecycle
Teams begin to realize the benefits of StoredIQ for Legal through the legal hold notification process. The solution helps reduce the preservation risk from lack of process integrity, minimize manual mistakes and eliminate common legal hold notification oversights. With StoredIQ for Legal, team members can easily identify custodians and draft legal hold notices by drawing on templates. They can send those notices, conduct custodian interviews, solicit approvals and track custodian responses from easily configurable dashboards. They can then schedule and automatically send reminders to custodians (including a consolidated reminder) about their ongoing duty to preserve, escalate non-responders to their manager and rapidly move from notification to sending preservation or collection requests to IT—all from the same interface.

If the reason for the hold turns into a formal legal matter, StoredIQ for Legal can streamline a variety of tasks for IT and non-IT users. For example, the solution helps IT users oversee the identification, collection and preservation of all physical and electronic data relevant to the matter. Those IT users can execute the business and technical processes as well as the communications needed to preserve data in an approved manner. Non-IT users can easily send role-appropriate alerts, set action items and produce reports.

Enhance the efficiency of eDiscovery management

- Reliably send legal hold notices and track responses across thousands of matters
- Automatically send reminders to custodians (including a consolidated reminder) and escalate non-responders
- Send interviews and manage responses with automatically generated follow-ups
- Manage by exception and utilize workflows to track approvals and follow-ups

StoredIQ for Legal Notifications provides legal staff an interface to manage hold notice notifications and conduct virtual interviews:

StoredIQ for Legal Identification and Collection offers several capabilities to help legal teams manage the eDiscovery collection process and reduce cost, complexity and common collection inefficiencies:
• Manage eDiscovery collections from more than 100 common data sources
• Identify and analyse data in place before collection, helping to save costs and reduce risk by amassing only required content
• Set collection criteria once and apply everywhere
• Identify and collect content in file shares, user desktops, email systems, archives, content management systems, collaboration systems, Microsoft SharePoint and more
• Track collection status and provide clarification throughout the process
• Export collected content and original metadata to major review tools

StoredIQ for Legal Identification and Collection helps IT and data experts:
• Receive and manage preservation and collection requests directly from legal in the same solution
• Find relevant content by metadata or full-text searches, or classify data with machine learning
• Access desktop and laptop data across large installations, with support for agent or agentless collection and full start and stop capabilities in a purpose-built, desktop collection interface
• Identify over 450 content types, including nested content in containers such as ZIP, PST and NSF
• Analyse content in-place before collection to cull large data sets into manageable collections
• Manage exceptions in an easy-to-use exception centre that supports the ability to retry and reroute exception content
• Provide collection status or ask for clarification from legal, all in the same interface
• Export collected content and original metadata to major review tools
StoredIQ for Legal eDiscovery for IT:

- Receive and manage preservation and collection requests directly from legal in the same solution
- Manage data request creation and fulfilment process with the right level of detail for legal and IT teams with a common understanding of request criteria, status, next steps, and outcome across all data sources
- Utilize multi-data source, date range, custodian criteria via fully customizable intake forms and fulfilment workflows
- Track status and provide communication through the process
- Capture results of the identification, preservation and collection activities

Generate precise insight to speed eDiscovery

Approximately 90 percent of corporate cases are settled prior to the collection process. In many organizations where no insight into data associated with a case is available, a settlement is made with little to no information regarding the actual merits of the case. StoredIQ for Legal is designed to accelerate the eDiscovery process and provide legal teams with insight into relevant data in-place prior to collection. This capability helps litigators make more informed decisions about whether to settle or litigate. If litigation moves forward, StoredIQ for Legal determines which data needs to be collected, and then collects the smallest legally defensible set of data.

Connect your data

From identification through collection, preservation and production of vendor-agnostic, review-ready load files, StoredIQ for Legal supports legal teams with deep data analysis. The solution identifies, collects and preserves active electronically stored information (ESI) on over 75 common enterprise data sources and more than 450 file types, including network servers, storage systems, laptops and cloud-based data—all while avoiding disruptions to end users.
Filter your data to create a custom data set

StoredIQ for Legal helps accelerate the understanding of large amounts of unstructured content through powerful search functionality, filters and explorers. Data can be filtered or acted upon and can be refined using a visual heat map. Data explorers visually represent unstructured data from various points of view, such as file system metadata attributes, data source location and category.

Defensibly present your eDiscovery workflow

With StoredIQ for Legal, legal users can take action to copy data to a retention server, move data for archiving, export data for review or delete data—with defensible actions and a full audit trail. Data topology, overlay hit, term hit, duplicate and data assessment reports provide valuable insight designed to help legal teams make more informed decisions about the merits of a case, prior to collection.
Implement comprehensive Information Lifecycle Governance

To maximize operational efficiency, control costs and reduce risks, organizations should integrate the eDiscovery process into a comprehensive approach to Information Lifecycle Governance (ILG). StoredIQ for Legal is part of IBM's Information Lifecycle Governance suite, which offers solutions for not only legal eDiscovery, but also records management and retention, archiving, curation, and content assessment and cleanup. Teams can automate records retention and disposal; efficiently archive content while enforcing policies; identify and process the most important data; remediate old, redundant data; and more. With IBM, organizations gain a powerful, comprehensive suite of ILG solutions from a single vendor.

IBM provides an integrated, modular and scalable information governance platform that enables line-of-business and IT professionals to more effectively understand and act on data where it resides. Leveraging the fabric of our information governance foundation to optimize existing legal, records, compliance and IT processes, IBM enables customers to manage enterprise information according to its business value, comply more efficiently with litigation and regulatory mandates and defensibly dispose of information that no longer has value or preservation requirements.

8.2.66 SullivanStrickler Software

SullivanStrickler’s proprietary technology and workflows are custom, scalable and market driven. They accelerate time-to-data, provide unparalleled access and data intelligence, and eliminate both cost and risk. Take command of your data with the only Legacy Data tools of their kind.

TRACS – (Tape Restore & Cataloguing System) our software can scan, catalogue, and restore files from the legacy backup tapes without the original software. Extensively used for Legacy Media consolidation and migration projects. TRACS makes use of data handlers, which are Dynamic Link Libraries (DLLs) created to translate the native backup software that originally wrote the data to the tape. The same handlers which translate data from tapes also create 3 types of tape container formats (TMF, TDF or TSF), which allow for consolidation of legacy media, reducing our client’s stored tapes and shrinking their physical storage requirements.

INVENIRE – Our secure web-based portal hosts metadata from various backup environments. There are 3 databases behind Invenire that host file level metadata, backup session level metadata, and mailbox level metadata. The metadata is imported into Invenire in real-time from either backup tapes scanned by TRACS, logs produced by Forensic imaging software, or by importing directly from the backup software database. Metadata can be custom created but typically, file path, filename, file extension, file size and M/A/C dates are imported into Invenire along with backup session name, policies and dates. Often used when the client wants immediate insight into what files are available on a set of tapes for a potential discovery request. When clients wish to retire an entire backup environment, Invenire is used as the portal to available data once created and managed by the retired environment, thereby potentially saving six-to-seven figure sums of money in legacy licensing fees.

LEAR - Legacy Email Archive Repository (LEAR) a web-based portal to a Private Cloud hosted application. It’s a depository for email archives with features to enable ECA (Early Case Assessment) functionality on email data. Users, Matters, Custodians, & Collections are custom organized on the platform by the user and then searches and culls of data performed by filters that include search terms (with proximity), date/time, attachment types, size and more. Data can be ingested to LEAR, either on the application itself via the web, or if archives are much larger, our engineers will ingest the data locally. Messages can be de-duplicated, filtered, and the target output created and saved as a custom PST, Zip file, or Relativity Load File. As clients migrate to Office365, LEAR is a cost effective, feature rich way to host legacy platforms which need not be imported into Office365, such as SourceOne, Barracuda, Enterprise Vault, and others. Filtered outputs enable more responsive data sets to be used on a review platform of choice further reducing costs.

8.2.67 TCDI Software Suite

Through their ClarVergence Suite (CV Suite), TCDI has created three applications that form the core of their eDiscovery technology offerings. These platforms have the ability to scale up and down, in order to support all litigation needs. For large matters, TCDI created CVLynx®, which supports both case management and eDiscovery. For smaller cases, TCDI's clients can use CVFox®. CVLynx, is designed for large-scale, complex litigation and CVFox, is designed for the small to mid-tier corporations and law firms. CVOnyx®, TCDI’s proprietary processing platform is used on the backend to perform culling, processing and data preparation for loading to CVLynx or CVFox.

CVLynx is a product of TCDI development, which allows them to customize their flagship product to meet client needs. TCDI focuses on continuous process improvement throughout their development of CVLynx resulting in continual reinvention of strategies to help clients decrease risk during cases, control and predict budgets and ultimately put the focus back on their core business. CVLynx offers counsel across multiple firms and locations the ability to compile, review, research and collaborate in a highly secure, web-based environment. Users have access to a highly customizable central repository that can handle individually unique data and file collection requirements. With CVLynx, TCDI becomes an extension of their clients’ litigation support and document production teams.

CVFox, which has the same power as TCDI’s flagship product, combines data processing, early case assessment, review and productions into a single, simplified SaaS solution. It is scalable and adaptable, making it sensitive to ever-changing litigation and project needs, allowing users to add new projects or build databases with the click of the button. Due to the minimal setup and training needed in CVFox, users are able to start processing and reviewing data within hours. Once logged in to CVFox users can upload their own data via a drag-and-drop interface that allows for a seamless transition from data processing to early case assessment, review and production, all within one consolidated platform. With CVFox, organizations of all sizes have the comfort of predictable pricing combined the capability to build simple and complex workflows in an easy-to-use solution. CVFox allows administrators immediate insight into their projects with customizable reporting, collaboration tools and powerful visualizations that save time and increase efficiency.

8.2.69 TransCEND (a TransPerfect Legal Solutions Company)

Summary

TransPerfect is the world's leading provider of language services and technology solutions. Our proprietary legal exchange platform, TransCEND, enables firms to share files in a completely secure environment. Offering the industry’s fastest repository creation, 24/7/365 support, and multijurisdictional hosting capabilities, TransPerfect is a trusted partner for every Am Law 200 and Global 100 law firm, as well as the majority of Fortune 1000 corporate legal departments.

Some of the enhanced features that we provide:

- **Increased Security** – Most secure platform on the market with SSAE 16 SOC 2 hosting, advanced intrusion detection, multi-factor authentication and IP filtering capabilities
- **Document Protection** – Industry leading Information Rights Management (IRM) capabilities that can disable screenshots, copy & paste, snipping, printing and downloading
- **Business Rules Engine** – Ability to create custom business logic that can be triggered based on metadata coded for documents, providing contract management capabilities
- **Automated Version Control** – Ability to check-in/out documents and utilize Open-In-Office protocols to edit and version Microsoft Office files directly through the application
- **Custom Metadata Fields** – Fully keyword searchable dropdown menus, radio buttons, check boxes, calendaring options and text fields associated with individual documents
- **Multilingual User Interface** – Stakeholders from different regions can review the user interface in their own languages which increases usability for non-native English speakers
- **Simplified Invite Process** – Bulk invitations can be sent from the system to all the authorized parties simply by copying & pasting recipients’ email addresses into our system
- **Built-in Redaction** – Ability to black out, highlight or annotate text using our built-in redaction system and grant users access to native documents or the redacted versions
- **Usage Activity Reports** – Includes advanced features such as data filters and report previews. Export reports to the program of your choosing (CSV, XLS, DOC, PDF)
- **Email Documents** – Documents can be emailed directly to the application index as attachments where they can be dragged and dropped into the appropriate folders
- **Communicate** – Communicate important information to individuals, groups, or organizations through the secure email system and Q&A module directly from the workspace
- **Advanced Search** – Ability to conduct Boolean & Lucene searches using custom operators and save both private & public search results to come back to them in the future
Security is Key:
- SSAE 16 SOC 2 Certified Hosting
- HTTPS Connection Running SSL Encryption
- Annual Audits and Penetration Tests
- Two Factor Authentication Process
- Multilingual User Interface and Support
- Document Encryption (Information Rights Management)
- Concurrent Login Restrictions
- Dynamically Watermarked Pages
- Inactivity Logout Timer
- Fast and Secure Scanning of All Documentation

8.2.70 TSD Relativity Product Suite

MaxBilling

Billing is an essential, recurring component of any project, and making the process more efficient can yield long-term savings. It consumes significant time and energy which could be used for key business activities. Of course, it is a crucial part of business, so it definitely deserves a sufficient amount of attention and preciseness.

But why does billing have to be difficult and time-consuming? There is now an innovative billing system within Relativity on-prem and RelativityOne platforms. Users of MaxBilling are able to automate the billing process by setting up billing periods and rates for various metrics (CaseRollup, Case Flow, Users, Analytics, Processing, Tasks) and generating accurate and detailed reports with calculated costs, minimizing time, effort, and the potential for making errors.

MaxBilling main features and functionality:

- Ability to manage the entire billing information within one profile by using different pricing types
- Threshold (tiered) pricing functionality
- Various billing categories out of the box: Case Rollup, Case Flow, Users, Analytics, Processing, Custom Tasks
- Automatic report & invoice generation with custom schedule options
- Custom and recurring billing periods for your periodic incremental usage check-ins
- Single- and multi-client reports and invoices on Instance, Workspace, Matter and Client level
- Available reports in PDF and Excel formats
- Collection of peak values for various items usage
- Customizable invoices based on mappings and templates
- Usage dashboards
- Supports RelativityOne, Relativity 9.3+
If you’re a project or case manager, you know how complex discovery projects can be. Case strategy and more can change at a moment’s notice – and these changes need to be communicated at the right time, to the right people.

MaxMessage streamlines communication across Relativity, making it easier than ever to get information to your teams. Compose rich-text messages, add attachments and schedule communications to be sent instantly or during specific time periods to different targets – individual users, a group of users, all users in a workspace, or all users in a Relativity instance. Track message acknowledgement and never ask yourself, “Did they get my email?” again.

**MaxMessage main features and functionality:**

- Compatibility with Relativity 9.3 and above
- Scheduling and sending rich-text messages to different targets
- Attaching various files to messages
- Ability to track message attachment downloads
- Receiving instant notifications/reminder popups anywhere in Relativity
- Access to Acknowledgment Message History
- Access to Inbound Message History
- Ability to download Acknowledgment Status Report in PDF file
TSD’s Email Event Handler is a Relativity-based application, that gives users the ability to send automated email notifications that notify selected recipients of edits or changes on a Relativity object.

If you are a Relativity user, you certainly know how essential it is to keep your team updated on any changes made on the current record. This is exactly why TSD has launched its newest application – TSD Email Event Handler. It enables users to set up different custom email templates which can be attached to any Relativity layout. This improves the tracking of any changes saved for a specific Relativity object. Using the provided placeholders, users can easily choose which part of the layout should be added to the email body, which facilitates the process of notifying team members of any ongoing changes.

TSD Email Event Handler main features and functionality:

- Supports RelativityOne, Relativity 9.3 and above
- Custom email templates
- Custom email body placeholders
- Setting SMTP configurations – Instance Settings and Secret Store supported
- Email History for each Relativity object, which is associated with an email template

8.2.71 UFED Series

The UFED Series consists of Hardware and Software products providing professionals a set of effective tools to extract, decode, analyse and report of data from mobile devices. It covers the full range of data collection for investigative and eDiscovery purposes and is used by law enforcement and litigation support professionals worldwide.

Cellebrite’s UFED Touch and UFED4PC Ultimate enable the most technologically advanced extraction, decoding, analysis and reporting of mobile data. It performs physical, logical, file system and password extraction of all data (even if deleted) from the widest range of devices including legacy and feature phones, smartphones, portable GPS devices, tablets and phones manufactured with Chinese chipsets.

With proprietary hardware, an integrated battery, an intuitive GUI and touch screen, the UFED Touch Ultimate speeds up the investigation process, meeting the demands of the mobile forensic industry.

UFED 4PC Ultimate is a versatile offering, that runs on existing hardware alongside other third-party software. It comes with a range of applications, invaluable for investigators to close cases faster:

- **UFED Physical Analyzer** – The advanced application for decoding, analysis and reporting
- **UFED Phone Detective** – For instant mobile phone identification
- **UFED Reader** – Enables authorized personnel to share information with others

Highlights:

- Physical extraction from BlackBerry devices running OS 4-7. Exclusive decoding: BBM data, apps, emails, Bluetooth etc.
- Widest support for Apple devices running iOS3+.
- Physical extraction and decoding while bypassing pattern lock / password / PIN from Android devices including HTC, Motorola, Samsung Galaxy SIII family and more.
- Physical extraction from Nokia BB5 devices – password extraction from selected devices.
- File system extraction from any device running Windows phone 7.5 and 8 including Nokia, HTC, Samsung, Huawei and ZTE.
- The most powerful solution for phones with Chinese chipsets.
- TomTom trip-log decryption, and data extraction from other portable GPS devices.
- Obtain existing and deleted data: apps, passwords, emails, call history, SMS, contacts, calendar, media files, geotags, location information, GPS fixes etc.
- Proprietary technology and boot loaders ensure forensically sound extractions.
- Frequent updates to ensure compatibility with new phones as they enter the market.
Cellebrite’s UFED Link Analysis is a new application which immediately identifies and visualizes the connections and communication methods used between multiple mobile devices, based on data extraction reports.

UFED Link Analysis provides fast results for first responders and creates a bigger picture of any investigation:

- Reveal communication links between multiple mobile devices based on a rich data set: mutual contacts, calls, SMS, MMS, email messages, chats, application transactions, Bluetooth devices, locations and more.
- Understand how entities are connected by visualizing data from multiple devices.
- Visualize the communication directions between entities, pinpointing bidirectional and unidirectional communication.
- Discover if entities were at the same place at the same time.
- Drill down to specific events.
- Share your findings with other investigators.

Main Features:

- **Entities analytics**: Statistical data shows the frequency of communication and preferred communication methods.
- **Timeline**: Displaying a list of events in chronological order.
- **Location analytics**: Analyse multiple suspects locations on a single map.
- **Mutual and all links graphs**: View the suspects and the entities.
- **Advanced filters**: Filter data based on date and time, communication methods, location types and distance.
- **Investigation data enrichment**: Add data or pictures on entities in extractions.
- **Advanced search**: Search for information based on free text or several parameters.
- **Project and table search**: Text search on all data available in the project or table.
- **Report generation**: Customize reports containing detailed information and graphs.
- **Graph snapshot**: Save an image of the current view.
- **Project management**: Save the project information.
- **Suspect's data management**: Add data and pictures collected during the investigation.

8.2.72 Venio

VenioOne
Better Discovery. Better Decisions

Venio Systems chose a new direction with our discovery software solution. Instead of a partial solution, we provide a fully unified platform to ingest and process data, perform early case analysis (ECA), analyse and review using customisable and automated workflows, machine and active learning technology, and export files. Modern legal and investigative teams need a solution that is more agile and adaptable than ever. With VenioOne, you decide where your data is stored – on-premises, in the cloud, or even on a standalone laptop. We believe it should be your choice.

Venio Systems has responded to our client’s needs and challenges by introducing more automation, advanced AI technologies, and flexible interfaces that are equally as responsive for small matters as for large matters involving complex data. A single unified software solution means centralized data and permissions management across all phases of discovery or an investigation. It also means more efficient workflows, simplified and lower licensing costs, tighter security, and easier integration with other legal software too.

Snapshot:
- Early Case/Data Analysis
- Processing of 500+ Data Types, including Office365, Cellebrite, Slack, Bloomberg, and Forensic Images
- User-Specific Applets and Open API
- Customisable Automation and User Permissions
- Web Console for Review
- Admin and User Dashboards
- Automated Batch Review
- Video Review and Tagging
- Simple & Advanced Search
- Advanced Email Analysis identifies Missing Emails
- Email Thread and Near Deduplication Analysis
- Sampling
- Active Machine Learning (Predictive Coding and CAL)
- Robust Export/Production
- Fully Automated Self-Service OnDemand Module
- Drag & Drop Data Upload & Collaborate from Anywhere
- Install On-Premises, Cloud or Hybrid of both

Processing/Administration & Applets

VenioOne’s robust processing supports more than 500 different files types, forensic images, and foreign language documents, including direct uploads from Office 365. The intuitive console is a single interface for managing processing rules for new and existing matters, the administration of security and user permissions, and the Applet component for customized workflows and integrations. For complex processes, VenioOne has wizards and the ability to create templates to automate common tasks.

With a completely unified platform, data is immediately ready for analysis and review as soon as it has been processed. While VenioOne includes review as part of our more efficient discovery workflow, we also support all major industry review software and can export industry standard load files directly from our processing solution.

A scalable and multi-tenant platform, VenioOne’s distributed processing is fast and easily manages multiple projects across multiple clients at the same time.
automated and customisable processing workflows enhance performance and reduce pre-processing and post-processing data management time.

Our Applet component is an API included to allow development to meet your specific needs. Periodically, we also share additional functionality that has been requested via the Applets.
Visual ECA & Project Dashboard

The VenioOne Project Dashboard is a powerful visual overview of data (media, custodians, documents, and email) for the selected project on several levels, but it’s more than just a data overview. Take action directly within the dashboard with additional filter, search, and tag functionality. Perform ECA and early culling tasks immediately without waiting for a review process to begin. Case managers, investigators, and others can assess data volumes by characteristics such as file type, domain, or language. Groups of documents can be tagged for culling, review, further investigation, and/or to generate searches.

![VenioOne Project Dashboard](image.png)
VenioOne Review Module

The Review Module in VenioOne enables the review of documents that have been batched by tag, folder, saved search, VAR/CAL profile, sampled documents, redaction set, or dynamic folder. To enable tiered reviews, administrators may establish review permissions for different sets of documents to be reviewed by specific groups of users.

Through automation and unlimited custom workflows, VenioOne’s design expedites the review process across the entire team. VenioOne’s display is highly customisable with an ability to add panels to display more information or detach panels for dual-screen workstations.

VenioOne Document Review Interface

Mobile & Messaging Data

Mobile devices and instant messengers are increasingly a data source for investigations and document reviews. VenioOne has responded by introducing the ability to ingest, analyse, and review Cellebrite, Slack, and Bloomberg data via Applets in our platform. Ingest and process mobile data along with the project’s emails and other ESI. Analyse conversations with VenioOne’s visual Social Network Diagram. Even review the relevant chats in either email format or original ‘bubble’ format with emojis.

VenioOne Social Network Diagram
Venio Assisted Review (VAR) and Continuous Active Learning (CAL) leverage predictive coding technologies to aid reviewers in the coding of documents during review. While some active learning solutions only allow 2 categories, an unlimited number of categories can be created and used to train VenioOne for document recognition. The unified architecture of the VenioOne platform enables the use of VAR and CAL immediately after data has been processed. With VAR, the legal team will need to gather training documents to create a model for the technology to use for prediction, but not so with CAL as the training occurs as documents are being reviewed.

After iterations to incorporate our partners’ feedback and perfect the technology, CAL was integrated within the VAR module of VenioOne in 2018. Our CAL technology uses batched reviews by human reviewers to inform and improve the CAL model until it can fully predict the remaining documents automatically, so we consider it the best of both the human and machine worlds.

VenioOne OnDemand

The VenioOne OnDemand (VOD) interface adds a self-service layer to VenioOne, which allows end users to immediately upload their own files, analyse, review, and produce electronic documents within your secure VenioOne environment. Perfect for service bureaus and law firms, as well as enterprise organizations seeking an easy-to-
use discovery solution, VOD is securely hosted behind the firewall, in the cloud, or with a service provider, wherever the VenioOne platform resides.

VOD provides simple drag-and-drop data uploads, a full featured review tool, advanced search, data analytics, and an intuitive interface, all while relying on VenioOne as a centralized administration and permissions hub. VOD is simple yet robust, enabling workspaces for review teams, investigators, and others to collaborate by inviting others to securely upload data into a project from anywhere via the “invite to upload” feature. Built to meet security needs, all actions are permissions and template based, email notifications are sent to both the end user and project managers, and two-factor authentication is used for sharing and collaborating.

VenioOne OnDemand Upload Interface displaying Upload and Processing Status
VenioOne OnDemand Analyse Dashboard - fully customisable and interactive

VenioOne OnDemand Review Interface with detached Image Viewer in Redaction Mode

Search

Search is a key component to getting at the exact data that will make or break your case. Venio’s search module is robust in functionality, but simple to use. Numerous types of searches are available and may be combined to create complex searches - Term, Load File, Tag, Folder, Wildcard, Fuzzy, Synonym, Proximity, Field, and Non-Processable. Our Query Builder makes building those searches a breeze. No more time wasted over a missing comma or parentheses! You can even do direct SQL database queries. Searches can be saved for reuse or used to dynamically populate Dynamic Folders with documents meeting the specified criteria. Persistent highlighting of search terms is also available to speed the identification of responsive, privileged, and hot documents.
VenioOne Search Module with Query Builder

Security

With VenioOne, you decide where your data is stored – on-premises, in the cloud, or even on a standalone laptop. For high security cases with no Internet connectivity, our entire platform can be run on a laptop. We believe the decision about your data storage should be your choice.

Due to our deep relationships with numerous service providers around the world and highly visible US government agencies, our security has been vetted and tested by the best in the business. If we can meet their requirements, you can rest assured that we will meet yours.

Partnerships

Venio Systems has long-standing partnerships with most major service providers and works closely with them to provide their most needed developments in VenioOne. For example, last year our developers worked with Brainspace developers to create a tight integration between our two platforms, so that additional analytics were available to those wishing to use a dedicated data analysis platform with their discovery platform.

8.2.73 **Veritas**

### End to end Intelligent Electronic Discovery Software Version 9.1 (released Oct 2018)

Respond to regulatory requests - Improve accuracy and meet strict deadlines. **Veritas eDiscovery Platform** now includes complete integration with the Veritas Classification Engine by delivering powerful intelligence into data risks on-premises and in the cloud. Through this new integration, customers can quickly scan and tag data, using a pre-designed set of classifications. This helps to ensure that sensitive or risky information is properly managed and protected. Be ready for impending privacy regulations such as GDPR or strict subject access requirements in FOIA.

- Classify, redact and annotate sensitive and personal data to defensibly satisfy Subject Access Requests
- Classification - Accelerate review of personal data by classifying data using Integrated Classification Engine (ICE) with configurable classification rules
- Pre-set Redaction Codes - Ensure consistent reasons for redacting data by pre-defining list of redaction codes for your reviewers and then search & filter by those reason codes
- Bulk Redactions - Mask sensitive data quickly and reducing review time & costs by redacting text across an entire dataset
- Annotation – Emphasize certain parts of a document by highlighting, commenting, stamping and using arrows
- Use intelligent Auto-Filters and Transparent Search to expedite your growing compliance workload
- Comprehensive case dashboard ensures compliance officers have a single-pane-of-glass view into ongoing investigations

The **Veritas eDiscovery Platform** brings transparency and control to the electronic discovery process. From legal hold to production, our workflow speeds time to resolution, improves accuracy and lowers costs. With better insight and less complexity, the eDiscovery Platform enables you to focus on strategy and create business value. It allows enterprises, governments, litigation support partners and law firms to manage legal, regulatory and investigative matters using a single application. Making it easy for organizations to cost effectively and defensibly solve real-world challenges across the entire eDiscovery lifecycle.

### Key Features

**Transparent Predictive Coding**

Open up the black box of technology-assisted review with Transparent Predictive Coding. This feature leverages machine learning technology to improve the efficiency and effectiveness of traditional linear review with increased accuracy, workflow defensibility, and tagging transparency. Predictive Coding Defensibility and the Transparent Predictive Coding Workflow

**Audio Processing, Search, & Review**

Multimedia content is growing rapidly within organizations and recent regulatory activity, including the Dodd-Frank Act, has brought these file types into the electronic discovery spotlight. Veritas offers a powerful phonetic-based solution for rapidly processing audio content and making it immediately available for search and review.
Enterprise Vault Collector

Manage data through the entire EDRM workflow with a single application by collecting content directly from Enterprise Vault. Using Enterprise Vault Collector, you can apply legal holds to content in the archive from the eDiscovery Platform.

Distributed Architecture

Quickly and easily add capacity on demand with the distributed architecture of the eDiscovery Platform. For the largest and most complex cases, this flexibility improves processing speed, user scalability, and export efficiency.

Key Benefits

Bring transparency and control to the entire electronic discovery process from legal hold and collection through production with a single platform and reduce costs.

Reduce the time of legal document review and cut costs by up to 98% with Transparent Predictive Coding.

Speed time to resolution and lower costs by reducing information for review by 90%.

Improve productivity of legal and IT staff immediately with an intuitive interface that is easy to use with minimal training.

Deploy the eDiscovery Platform as a single unified application or tailor the solution with just the modules you need.

Empower users to be productive immediately through an intuitive, Web-based platform that is easy to use and administer.

Archiving & eDiscovery

Improve Information Governance, Reduce Risk and Save Money

With Veritas Enterprise Vault™ and the eDiscovery Platform, Veritas delivers the first fully integrated electronic discovery and archiving solution. Legal and investigative teams now have a single, seamless interface to search and collect data, place holds within the archive, and perform analysis and review. With integrated classification to Enforce intelligent retention policies by quickly locating and quantifying valuable and sensitive data.

More Information

For data sheets, product updates and more detail on the features and benefits, visit; https://www.veritas.com/product/information-governance/ediscovery-platform

Figure 8. Automated tracking and reporting: View the status of all legal hold notices across all cases in a single view.
Figure 9. Collection analytics: Provide a complete portfolio of analytical charts and tables that offer real-time visibility into the status of the collection.

Figure 10. Pre-processing analytics: Graphically depict data volume, file types and time frames of collected data prior to processing.

Figure 11. Concept search explorer: Provides a visual interface to dynamically explore and discover new relevant concepts.
Figure 12. Lifecycle reporting: Summarizes case status from collection through production in a single dashboard.

Figure 13. Near-native viewer: Access documents, attachments and email threads in near-native formats for review, tagging and redaction.

8.2.74 **Viewpoint**

**VIEWPOINT FEATURES:**

**Identification:** Viewpoint maintains the capability to access any machine connected to the network to identify, mark and copy files contained on file servers and other sources by file type, custodian, date of last access, date creation, system or key terms.

**Collection and Preservation:** The Viewpoint Collection and Preservation module allows users who have implemented Viewpoint within their own network infrastructure to perform active file collection and preservation. Through a simple point-and-click interface, corporations may filter by a number of parameters to collect and preserve electronically stored information, forensically copied and preserved directly into the Viewpoint’s Evidence Repository.

**Evidence Repository:** Viewpoint’s Evidence Repository preserves all data collected for every project throughout the lifecycle of the matter. All data is forensically maintained prior to filtering, culling or deduplication to provide an easily acceptable data warehouse that allows the legal team to repeatedly access evidence as refinement of the parameters in the case unfold. The ability for the legal team to easily “go back to the well” to further sample additional terms, concepts and other criteria is fully integrated with a robust reporting engine to display results of various “what if” scenarios.

**Pre-Processing:** The Viewpoint Pre-Processing solution enables clients to greatly reduce electronic data sizes at the earliest stages in the e-Discovery lifecycle. For a fraction of full processing costs, Viewpoint pre-processing will de-nist, de-dupe and even apply dynamic date filters to quickly cull large sets of data. By removing system files and unwanted documents before processing begins, Viewpoint will save you both time and money throughout the e-Discovery process.

**Viewpoint’s unique pre-processing features include:**

- Data cataloguing
- File extension filtering
- Fully recursive document level date/time filtering
- File type identification
- User-directed file folder removal
- MD5 Hash calculation NIST filtering, system file removal
- De-duplication

**Processing:** Viewpoint’s lightning fast processing solution offers advanced capabilities to provide channel partners, corporations and law firms the ability to filter and process large volumes of data in a fraction of the time it would normally take. With our scalable technology, clients can begin to review and analyse data sooner, as well as perform analytics and data assessments early on in the case to assist in 26(f) planning and analysis before data is posted for review. Viewpoint Processing is the perfect solution for cutting back on burdensome review costs.

**Early Filtering:** Viewpoint’s advanced early filtering capabilities allow users to apply one or any combination of available filters such as custodian, file type, date range, file size and many more. Early filtering greatly reduces unnecessary and costly processing and review. With a few quick and easy mouse clicks, users can apply custom filters to view only the results they’re interested in.

**Systematic Deduplication:** Clients can avoid wasteful analysis and review time by de-duping within or across all custodians and sources. Viewpoint’s intelligent de-dupe algorithm gives the administrator or user choices as the data moves through the
system into review. Additionally, one can always be assured that every document is tracked, saved and available for export by custodian for a completely defensible process.

**Multi-language support:** Full Unicode and double byte character support is included within the processing platform and currently supports 26 languages. All multi-language documents are fully supported for review, coding, indexing, searching, metadata filtering and production.

Viewpoint also includes:

- Data staging
- Recursive email and e-file container extraction
- Recursive embedded object extraction
- Metadata extraction
- Text extraction
- HTML creation
- Near duplicate identification
- Indexing all data using dtSearch™ engine
- Strata Map (Heat Mapping)
- Visual Index & key term analysis
- File type (extension) analysis
- Email thread redundancy identification
- File validation confirming identity of file type
- TIFF generation
- OCR processing

**Viewpoint Assisted Review:** Viewpoint’s technology-assisted review module is an integrated module within Viewpoint at no additional cost – cuts cost and time by automating review for document prioritization, QC enhancement or wholesale binary review. Viewpoint Assisted Review allows users to:

- Leverage it alongside Viewpoint’s analytical tools to build the most efficient “seed” set and drive the most accurate review results
- Utilize it in combination with traditional culling techniques to further minimize the review population in a defensible manner
- Isolate the most highly relevant documents for ECA purposes in order to understand facts of the case early in the matter

**Analytics:** Viewpoint analytics are seamlessly integrated into your Viewpoint review workflow at no additional charge.

**Near Duplicate Review:** Eliminate redundant data to accelerate review speed and productivity. Using Near Dupe Similarity Viewer:

- Automatically group similar documents – email, spreadsheets, text files and other electronic data – for any number of custodians
- Review side-by-side version comparison and code individually or en masse
- Exclude non-relevant data from the review process early on to save time and costs
Email redundancy and thread management: Identify and group messages that are 100% contained in subsequent emails in the same thread with a redundancy algorithm that analyses the content of each message to ensure that previous versions of the same thread are contained within subsequent threads.

- Defensibly reduce data volumes by only reviewing the last email in the email thread
- Have 100% confidence that previous emails in a thread are included within the last email
- Identify where an email thread breaks down, and review the last email of the new thread
- Easily detect subject line changes, the addition or removal of correspondents, or where emails are missing all together
- Identify families across multiple custodians to ensure consistent treatment of each thread
- Code entire families at once, preventing inconsistencies across custodians or messages

Relationship Analysis: Identify the who, what and when of email communications between custodians with simple graphic visuals and maps.

- See spikes in communications between custodians early in a matter – eliminating the review of unnecessary data later on
- Identify communications between known custodians and unknown parties to help you comply with discovery requirements
- Know who sent and received important documents within specific timeframes
- Understand communication patterns of interest among various custodians
- Dynamically group communications sent to various network domains (i.e., outside of the company)

Concept Analyzer: Search and visually cluster documents by concepts for one or more sources based on multiple criteria. Clustered concepts can be reviewed immediately, saved or made available to multiple users to access, review and code.

- Quickly identify important topics and groupings of related documents across and between concepts
- Prioritize review early on in a case and focus on what matters most right from the start
- Automatically cluster, search, group, merge, sort, save and print by concept
- Create a focused sampling of documents across the global data set when used in conjunction with Near Duplicate Identification

- Easily identify and exclude false positives in a data set prior to building review assignments
- Reverse the functionality by selecting only the specific terms required for a search
- Generate a tree containing populated search results corresponding to each search term, with a listing of all wildcard and proximity search results
• Refine your original keyword list to generate more targeted and accurate search results using Spelling Suggestion

• Further refine search results by easily incorporating potentially useful terms gathered from the search index

• Easily modify your original search criteria and rebuild your views based on newly fetched search information generated

**Strata Map:** The Strata's functionality is used to identify and group documents based on user-specified document attributes. Strata's allows users to create multiple layers (or levels) of grouping to help them pinpoint documents for review/investigation or mass tagging.

**Review:** Viewpoint Review platform is the ideal linear review application. Containing advanced analytical features, Viewpoint Review allows users to perform simple document coding as well as mass coding among email threads or suggestive coding among near dupe families. By decreasing the amount of time it takes for review, clients can accelerate their litigation process while keeping costs low. Our leading-edge review tools include:

*Customizable Layout:* Viewpoint contains a series of customizable panels that may be located anywhere on the user's desktop and saved in accordance with the reviewer's own preference. Default settings may be controlled by the administrator and dual monitors are supported. Having a clean and manageable workspace will make the review process easier and more efficient.

*View Manager Search Preview:* Users can not only examine their search results prior to creating a document batch, but they can also ensure that their search and filter criteria were correctly enabled and exclude any false positive occurrences. Clients can also remove documents or add any relevant document not populated by their search.

*Native Viewer:* Users can review more than 400 documents types in their native format without having to open corresponding applications. This will cut down on review time, further lowering litigation costs.

*Suggestive Coding:* Users can significantly reduce their review time with Viewpoint's suggestive coding. One can instantly see similar documents across the entire database already coded by other reviewers. Where documents are not exact duplicates, Viewpoint's suggestive coding helps to eliminate conflicting coding and duplicate review of highly similar documents.

*Inline Redaction:* Our intelligent redaction tool can be used to trim parts of or entire documents. The “redact out” feature is useful for quickly and efficiently blacking out large areas by only having to select the small non-privileged parts. Users can redact 5,000 page Excel spreadsheets in literally seconds.

*Keyword Filtering and Hit Highlighting:* Upon populating one's keyword results, our dynamic filtering capabilities can be used to display documents containing one or more hits within the entire view. All search terms are clearly highlighted across any document type to help accelerate review time and keep litigation costs low.
Production: Lateral Data’s Viewpoint Production Platform offers efficient document production features that are seamlessly integrated into our enterprise software suite. Lateral Data’s production capabilities enable users to complete the entire electronic discovery process within our vertically integrated system. Viewpoint enables users to manage both outbound and inbound productions in one centralized location. Our advanced production features include:

Native and TIFF Production: Documents can be produced in native, TIFF or other image based formats. All industry standard delivery formats are supported by our flexible production capabilities. Duplicates may be reloaded into productions or suppressed and flagged. Additionally, many customizable delivery features allow users to accomplish the most complicated requirements.

Categorized production folders: Clients will stay organized and efficient by producing and storing documents in the same folder sets utilized during review.

Rolling Production: With rolling production, users can easily produce data on a rolling basis throughout the entire e-Discovery process. Deliveries and all included metadata may be viewed prior to and after actual production within Viewpoint’s production module, ensuring that users have complete control over their data.

Production Security: Once data is produced, users can instantly lock all review folders and documents to preserve coding integrity and prevent others from making changes to delivered data.

Case Management: Lateral Data’s Viewpoint Case Management includes the integrated View Manager for creating and editing document batches and assignments as well as a sophisticated dashboard for selecting projects and viewing project analytics. With Viewpoint’s case management, one can monitor the progress of each case and can be assured that time constraints are being met. Lateral Data’s case management features include:

Viewpoint View Manager: This is the central searching, filtering and project lifecycle console for project managers and reviewers during all phases of the review process. Project managers can use the View Manager to completely automate the creation or editing of unlimited document batches and assignments simultaneously based on one or more search criteria and/or filters.

User Management: Project managers can use the View Manager to enable, disable or modify user accounts and settings. Specific roles can be set up to allow secure access to only certain folders or features.

Activity Logs: Clients can monitor their reviewer’s activity with our dynamic activity log system. All actions such as login, logout, searching and coding can be monitored. By eyeing a team’s progress, project managers will be aware whether or not their team is achieving maximum efficiency.

Viewpoint Dashboard: Our graphical user interface is useful for simplifying administration and providing statistics for predictive reporting, deadline compliance, resource quantification, end-user productivity, coding statistics and other detailed reporting required to successfully manage a project.

8.2.75 **XBundle Software**

**XBundle::Assemble** is a bundling solution designed to help legal teams efficiently produce high quality, professional electronic document bundles.

- Documents are dragged straight from the desktop or imported via a CSV load file from a document review platform, into virtual lever arch files, providing an at-a-glance archive of all bundles prepared during the course of a case or matter.
- Cross references and hyperlinks are created on-screen by simply dragging and dropping.
- The resulting trial-ready bundles can be exported to PDF for printing, or exported to XBundle::View.

**XBundle::Assemble**

- XBundle::Assemble supports Excel spreadsheets and provides a full in-application preview showing tabs, formulas and formatting.
- Any file type can be imported into the application and when exported to PDF, non-PDF documents are included as attachments for easy distribution. XBundle::Assemble also has the ability to support audio and video files for export to XBundle::View.
- Fully hyperlinked bundle sets, containing multiple file types, can be quickly produced for distribution as an e-bible format.
- Custom pagination can be applied to the bundles, including pagination per tab, in accordance with the Patents Court.
- Covers, spines and inside labels for print bundles, complete with full case details, are automatically generated and custom indices (which can be exported with hyperlinks to the documents) can be exported on demand.
- After bundles have been finalised, late documents can be added as insert packs with suffixed pagination. These can be exported separately, either to PDF for printing and manual insertion, or to XBundle::View as an update pack.
**XBundle::View** mimics paper bundles (and can be used seamlessly in parallel with paper bundle sets), but also incorporates hi-tech features such as annotation and collaboration tools, in-built real time transcripts and synchronized media viewing.

The use of widescreen technology to display a split screen view, allows for side-by-side comparison of documents (without the need to scroll or zoom), providing an integrated electronic evidence presentation solution at trials.

- Annotations and highlights can easily be added to documents. When an internet connection is present, users can utilise the system’s collaboration tools, which includes a chat panel where notes and hyperlinks can be shared.
- XBundle::View employs “hybrid cloud” technology, allowing it to bypass the internet and load documents from an encrypted copy of the document store on the user’s USB stick when the internet connection is absent or slow.
- Display monitors can be synchronised so they all show the same page on the command of a designated party member acting as a ‘page turner’.
- Working with the industry’s leading court reporters, XBundle::View can provide real-time unedited transcripts. XBundle::View can link to all mainstream transcription services and provide an edited certified version of the proceedings on a continual updating basis.

We offer catered training for both end-users and service providers, covering an array of system features including (but not limited to) custom installation, import plug-in configuration and index creation.

8.2.76 ZyLAB Systems

ZyLAB’s eDiscovery Platform

The ZyLAB eDiscovery Platform is directly aligned with the Electronic Discovery Reference Model (EDRM) and features modules for forensically sound collection, culling, processing and legal review. ZyLAB systems are deployed in-house on-premises or in the Cloud (Azure or private cloud) and are also available in a Software-as-a-Services (SaaS) model.

ZyLAB eDiscovery platform contains the following modules:

Legal Hold

ZyLAB Legal Hold is a complete management application to create, manage and track legal holds. Users can send out legal hold notifications which can be tracked with reminders, escalations andlift notifications to ensure that legal holds are seen and enacted upon.

Collection & Processing

Automated collections and periodic recollections from many different locations and repositories into one location saving tremendous time and IT resources. Our advanced processing engine collects over 700 different file formats including complex formats such as audio and images. Data is culled, de-duplicated, enriched and prepared for legal analysis. With ZyLAB collection and processing, you can reduce the need for expensive forensic images, thus saving tremendously on the cost of specialist service providers.

Early Case Assessment

With ZyLAB, Early Case Assessment (ECA) can be performed on a data sample or in-place data sources. You can quickly assess the potential liabilities and estimate the scope of an impending legal hold and collection. It will allow you to make a full cost-benefit analysis, shape your strategy, steer settlement conferences and identify weaknesses in internal systems that need attention. ECA also allows immediate searching and data analysis for in-house efforts to settle a case on the most favourable terms.

Legal Review

The intuitive and easy-to-use Legal Review interface allows reviewers and investigators to quickly search, browse, tag, annotate and redact documents. With ZyLAB Legal Review, you can optimize the usage of in-house and outside counsel, control your external expenditures, and measure productivity. The Legal Review Dashboard highlights critical information and provides quick access and filtering of the documents.

Legal Production

Accelerates and simplifies the production of documents for opposing counsel, external counsel and regulators. Quickly produce documents by key words, bates document or metadata in different formats, including native and TIFF. Documents can be import into external case management systems for further analysis. All documents are kept in an open XML format ensuring that they can easily accessed in the future, saving you time and costs.
ZyLAB’s modules

AUDIO SEARCH
ZyLAB’s intuitive and cost effective Audio Search add-on utilizes high accuracy, high performance speech technology that is capable of complex searches to significantly reduce the resources required to analyse audio and video files.

ZyLAB’s Audio Search is the first eDiscovery application to incorporate audio speech search technology as part of a standard review platform to enable users to search, review and analyse audio data so that they can quickly pinpoint the relevant subset.

ZyLAB’s Audio Search provides insight for legal disputes and forensic data searches with true phonetic speech technology to release valuable intelligence.

VISUAL CLASSIFICATION
The Visual Classification add-on automatically recognizes the content of pictures and videos and identifies amongst others: people, babies, elderly people, flowers, cars, planes, indoor and outdoor scenes, and many other concepts. ZyLAB’s Visual Classification is aligned with the Electronic Discovery Reference Model (EDRM) and dramatically accelerates the process of searching and identifying non-textual information.

Visual classification can be used for the identification of images that contain personal identifiable information (PII), potential intellectual property (PI), handwritten notes, checks, ID’s, and other information that otherwise cannot be recognized automatically and would require a full manual review. The identified objects can be tagged directly and if needed, investigated in more detail.
SCAN AND OPTICAL CHARACTER RECOGNITION (OCR)

ZyLAB’s advanced scanning and OCR functionalities make even original signed contracts, construction blueprints, complex workflow schematics, photo’s, images, bitmaps and PDF files available for search and ready for digitally archiving.

ZyLAB’s scanning solution drives scanners from different brands such as Fujitsu, Canon and Kodak. The advanced OCR engines support content scanned in multiple directions (i.e., fax headers at 0, 90, 180, and 270 degrees), recognizes more than 400 foreign languages and supports voting algorithms, auto-orientation, full-color OCR and much more.

ZyLAB’s Scan and OCR combines powerful functionality and 30 years of experience to increase recall and provide superb recognition results.

MACHINE TRANSLATION
ZyLAB’s Machine Translation add-on offers the unique ability to handle high volumes of translations quickly. Instead of passing on documents you can’t read for review to a native speaker or translator, ZyLAB’s Machine Translation option creates a fully automated translation. Translation support is offered for over 50 language pairs and can be performed during the review of the document or in batch during processing. Translations are stored as a child document to the original making sure that you can always return to the original when needed.

ZyLAB’s systems leverage translation software that is based on statistics instead of complex linguistic rules. This software learns to accurately translate new information by examining previous human translations. While the translations may not be admissible in court, they do provide great insights into the content of large document and e-mail collections.

Machine translation is most relevant to intelligence, security, law enforcement, compliance, eDiscovery, and auditing work, and prevents costly and timely manual translations.

PROFESSIONAL TEXT MINING

ZyLAB’s Professional Text Mining add-on leverages various mathematical, statistical, linguistic and pattern-recognition techniques to extract unknown or obscured information and knowledge from unstructured text.

By focusing on patterns and characteristics and the use of advanced techniques such as natural language processing and machine learning, text mining can produce better search results and deeper data analysis, to quickly retrieve information that otherwise would remain hidden.

ZyLAB’s Professional Text Mining adds value to any circumstance in which all potentially relevant hits—as opposed to just the obvious hits—are required, such as criminal investigations, legal discovery, and due diligence investigations.

8.2.77 Zylpha Solutions

Software Information

Electronic Document (Court) Bundling

Lawyers are great problem solvers. They are great thinkers. They do highly stressful work that is nuanced and is based in ‘the grey’ rather than the black and white world that most of us live in. Their reputation is gained and lost through the direct result of their successes and failures. All whilst dealing with ever increasing pressures from clients, the profession and even society as a whole.

Thing is, if you ask any lawyer what their main headaches are, preparing bundles will be on the list, and we find that it’s the number one administrative problem affecting lawyers today.

It’s easy to understand why, as bundles are expensive to produce. They typically contain sensitive information that you don’t want to lose, take a vast amount of time to prepare and are often produced at the last minute - making them very stressful. Bundles take hours to assemble; that’s time tied up in something that is very administrative and means you can’t work on any other case.

Put simply, it’s inefficient, expensive, time consuming and stressful.

Imagine spending half of your day photocopying, sorting documents into ring binders and handwriting page numbers. Knowing that your inbox is going unattended. That the phone won’t stop ringing. That your clients who you have worked tirelessly for aren’t getting the updates they so deservedly need because you must photocopy some documents which didn’t print properly the first time around.

On top of that you’ve been hogging the photocopier so no one else can use it. Your colleagues are having to cover the phones whilst you prepare the bundle, and you’re probably working through your lunch and staying late for those last-minute additions that never take just five minutes as everyone promises.

Simply put, it’s a time-consuming administrative task that everyone really hates doing.

We know all of this because we’ve done it ourselves. We’ve spent hours in front of the photocopier, we’ve hand typed spine labels, we’ve got the scratches and scrapes from having to use ‘that’ ring binder that doesn’t close properly.

That’s why over 12 years ago we wrote the first version of our software. To make it easy for all lawyers and legal professionals regardless of the type of work they did, or the size of the firm they worked for, to be able to produce bundles in minutes.

</table>
ANNEX A - TECHNICAL GLOSSARY

ACTIVE OR LIVE DATA: Information residing on a computer's hard drive or servers which is readily visible to users (e.g. a document, spreadsheet or an e-mail).

ALGORITHM: A detailed formula or set of steps for solving a particular problem (e.g. searching for relevant electronic documents, such as, MDS# or SHA-1#).

APPLICATION: A collection of one or more related software programmes that allow a user to enter, store, view, change or extract information from files or databases (e.g. Word, Excel and Microsoft Office). Also referred to as "programmes" or "software".

ARCHITECTURE: Hardware and/or software comprising a computer system or network.

ARCHIVAL DATA: Information that is not directly accessible to the user of a computer system but is data that the organisation maintains for long term storage and record keeping purposes (e.g. backup data).

ATTACHMENT: A record or file associated with another record for the purposes of retention or transfer. The attachment is commonly referred to as the "child" with the record it is attached to as the "parent". If the attachment itself has an attachment this would be a "grandchild" and so on. A synonym is an ATTACHED DOCUMENT, which means a Document attached to, or embedded in, a HOST DOCUMENT.

AUDIT TRAIL: Information about where data has been, in whose possession and why, held in sufficient detail so as to allow the reconstruction of that activity.

AUTHOR: The person, office or designated person responsible for a document's creation or issuance. Also referred to as "originator".

BACKUP DATA: A copy of data created as a precaution against the loss or damage of the original data. Backup data is information that is not presently in use by an organisation and is routinely stored separately upon portable media, to free up space and permit data recovery in the event of disaster. Backup data can be incremental (where only new data is saved) or complete (where all data is saved).

BACKUP TAPE RECYCLING: The process whereby an organisation's backup tapes are overwritten with new backup data, usually on a fixed schedule (e.g. the use of nightly backup tapes for each day of the week with a daily backup tape for a particular day being overwritten on the same day the following week; weekly and monthly backups being stored offsite for a specified period of time before being placed back in rotation).

BATES NUMBERING: is used in the legal, medical, and business fields to place identifying numbers and/or date/time-marks on images and documents as they are scanned or processed, for example, during the discovery stage of preparations for trial or identifying business receipts. Bates stamping can be used to mark and identify images with copyrights by putting a company name, logo and/or legal copyright on them. This process provides identification, protection, and automatic consecutive numbering of the images. The process is named after the late 19th century inventor Edwin G. Bates of New York City.

BYTE: The basic measurement of most computer data.

CD-ROM (CD READ ONLY MEMORY): Data storage medium that uses compact discs to store about 1,500 floppy discs worth of data, that is, approximately 55,000 pages. Variations include CD-Rs (CD Recordable) and CD-RWs (CD Re-Writable).

CLUSTERING: Functionality whereby ESI containing similar content is grouped together by the software without human intervention. Results might be shown in a pictorial manner with items of ESI "clustered" together, or by folders of similar documents.
**COMPRESSION**: The reduction of the size of a file to save storage space. "Compression ratio" is the ratio of the size of an uncompressed file to a compressed file.

**COMPUTER ASSISTED REVIEW (CAR)**: Also known as **Technology Assisted Review (TAR)**. A process of having computer software electronically classify documents based on input from expert reviewers, in an effort to expedite the organization and prioritization of the document collection. The computer classification may include broad topics pertaining to discovery responsiveness, privilege, and other designated issues. Also see: **Predictive Coding**.

**COMPUTER ASSISTED REVIEW REFERENCE MODEL (CARRM)**: Model used to show stages of process of Computer Assisted review (CAR).

**COMPUTER FORENSICS**: The use of specialised techniques for recovery, authentication, and analysis of electronic data.

**CSV FILE**: A computer file containing a list of values separated by a comma or other delimiter.

**CUSTODIAN**: Person having control of a network, computer or specific electronic folder.

**DAT (DIGITAL AUDIO TAPE)**: A high capacity storage medium. Used in some backup systems.

**DATA MAP**: A written description (possibly with a diagram or two) of where the client’s data sources are.

Data sampling: See Sampling.

**DE-DUPLICATION**: The process of identifying and removing duplicate Documents from a collection of Documents so that only one unique copy of each document remains. A cryptographic hash function such as the Message Digest algorithm 5 may be used to generate a digital fingerprint for an Electronic Document. The digital fingerprint of a Document can then be electronically compared against the digital fingerprint of any other Document to determine whether the Documents are exact duplicates. De-duplication may also be implemented by using a cryptographic hash function applied to a group of Documents.

**DELETED DATA**: Data that, in the past, existed on the computer as live data and which has been deleted by the computer system or end-user. Deleted data remains on storage media in whole or part until it is overwritten by on-going usage or “wiped” with a software program specifically designed to remove deleted data. Even after the data itself has been wiped, directory entries, pointers, or other metadata relating to the deleted data may remain on the computer.

**DELETION**: The process whereby data is removed from active files and other data storage structures on computers and rendered inaccessible except by using special data recovery tools designed to recover deleted data.

**DISC (DISK)**: It may be a floppy disk, or it may be a hard disk. Either way, it is a magnetic storage medium on which data is digitally stored.

**DISCLOSURE DATA**: Data relating to disclosed Documents, including for example the type of document, the date of the document, the names of the author/sender and the recipient, and the party disclosing the document. See OBJECTIVE and SUBJECTIVE CODING. Normally only **OBJECTIVE CODING** is disclosed with documents.

**DISTRIBUTED DATA**: Information belonging to an organisation which resides on portable media and non-local devices such as remote offices, home computers, laptop computers, personal digital assistants (PDA’s), wireless communication
devices (e.g. Blackberry) and internet repositories (such as email hosted by internet service provider or portals and web sites).

**DOCUMENT**: Anything in which information of any description is recorded (see CPR Rule 31.4). It includes all ESI.

**DOCUMENT CODING**: The process of identifying and recording case-relevant information (e.g. author, date authored, date sent, recipient, date opened, etc.) from a document. Can be automated or manual. Also referred to as **INDEXING**. See also **OBJECTIVE CODING** and **SUBJECTIVE CODING**.

**DOCUMENT MANAGEMENT**: The manual and automated processes for the management of documents during the course of proceedings, including the identification, preservation, collection, processing, analysis, review, production and exchange of documents.

**DVD (DIGITAL VIDEO DISC OR DIGITAL VERSATILE DISC)**: Data storage medium, like a compact disc, upon which data can be written and read. DVDs are faster, can hold more information, and can support more data formats than CDs.

**EARLY CASE ASSESSMENT (ECA)**: Also known as "**EARLY DATA ASSESSMENT"**. Initial process in the EDRM approach whereby a large volume of data (normally emails and attachments) goes through various processes such as clustering, semantic analysis, and email threading to enable early decisions to be taken on the relevance of ESI.

**ELECTRONIC DATA DISCLOSURE (EDD)**: Also known as **eDISCLOSURE**. Process of disclosing ESI. Not to be confused with using electronic means to carry out the disclosure of images of paper documents or printed out emails, Word documents etc.

**ELECTRONIC DISCOVERY REFERENCE MODEL (EDRM)**: Model used to show stages of process of electronic discovery.

Electronic Document: see Electronically Stored Information (ESI).

**ELECTRONIC IMAGE**: an electronic representation of a paper document or Electronically Stored Information. An Electronic Image may be a **SEARCHABLE IMAGE** or an **UNSEARCHABLE IMAGE**. Examples are image PDF files and TIF (/TIFF) files.

**ELECTRONIC STORAGE SYSTEM**: A system or medium for retaining Electronically Stored Information.

**ELECTRONICALLY STORED INFORMATION (ESI)**: Electronic files on a computer such as emails, Word, Excel, PowerPoint, Adobe PDF documents. It includes (for example) e-mail and other electronic communications such as SMS and voicemail, word-processed documents and databases, and documents stored on portable devices such as memory sticks and mobile phones. In addition to documents that are readily accessible from computer systems and other electronic devices and media, it includes documents that are stored on servers and back-up systems and electronic documents that have been ‘deleted’. It also includes **METADATA** and **EMBEDDED DATA**.

**EMAIL THREADING**: Software functionality that pulls together the various emails that make up a "thread of conversation" and display them in an easy to understand manner. The normal aim is have the final email in a chain readily identifiable so that all the secondary emails in the conversation can be read in one pass.

**EMBEDDED DATA**: Text or other information which is not typically visible to the user viewing the output display on screen or as a print-out. Examples of Embedded Data include spreadsheet formulae (which display as the result of the formula operation), hidden columns, externally or internally linked files (e.g., sound files in PowerPoint presentations), references to external files and content (e.g., hyperlinks to HTML files or URLs), references and fields (e.g., the field codes for an auto-numbered document),
ANNEX A - TECHNICAL GLOSSARY

and certain database information if the data is part of a database (e.g. a date field in a database will display as a formatted date, but its actual value is typically a long integer).

**Encryption:** Procedure whereby the contents of a message or file are scrambled or made unintelligible to anyone not authorised to use it.

**Field:** A section of data in a database, for example a field containing the date of a document.

**File Slack Space:** A form of residual data, slack space is the amount of on-disk file space from the end of their logical record information to the end of the physical disk record. Slack space can contain information soft-deleted from the record, information from prior records stored at the same physical location as current records, metadata fragments and other information useful for forensic analysis of computer systems.

**Forensic Copy:** An extract copy of an entire physical storage medium (hard drive, CD-ROM, DVD, tape etc.). Also referred to as "mirror imaged copies", "imaging" and "disc mirroring".

**Format:** The way in which Electronic Images and other documents are stored and made accessible.

**GIF (Graphic Interchange Format):** A computer compression format for pictures.

**Gigabyte (GB):** A measure of computer data storage capacity and equivalent to a billion (1,000,000,000) bytes. Also referred to as a "gig".

**Hard Drive:** The primary storage unit on PCs, consisting of one or more magnetic media platters on which digital data can be written and erased magnetically.

**Host Document:** A Document with one or more Attached Documents. For example, an e-mail is a Host Document and any Documents attached to the e-mail are its Attached Documents.

Indexing: See Document Coding.

**Internet Service Provider (ISP):** A business that provides access to the Internet.

**JPEG (Joint Photographic Experts Group):** An image compression standard for photographs.

**Keyword Search:** A search for documents containing one or more words that are specified by a user. Normally conducted on Electronically Stored Information, but can also be carried out on OCR Text.

**Kilobyte (KB):** A measure of computer data storage capacity and equivalent to a thousand (1,000) bytes.

**Legacy Data:** Information that has been created or stored by the use of software and/or hardware that has become obsolete or has been replaced ("Legacy Systems").

**Legacy Systems:** Systems containing legacy data.

**Litigation Hold:** An instruction issued as a result of current or anticipated litigation, audit investigation or other such matter that suspends the normal processing or disposal of records.

**Litigation Support Software/System:** Application that supports the process of litigation. In terms of the EDRM approach this stage occurs after the Early Case Assessment stage.

**Loose Document:** An Electronic Document that is stored in its Native Form in a file system or directory system but not an email box. An email or document attached to an email, even if extracted from the email box in which it was originally stored, is not a
Loose Document.

**MEDIA FREE SPACE**: Unused space on storage media that is available for storage.

**MEGABYTE (MB)**: A measure of computer data storage capacity and equivalent to a million (1,000,000) bytes. Also referred to as a “meg”.

**METADATA**: Commonly described as "data about data". It is information that may describe, for example, how, when and by whom it was received, created, accessed, modified and how it is formatted. Some metadata, such as file date and sizes, can easily be seen by users. Other metadata can be hidden or embedded and is unavailable to computer users who are not technically adept. Metadata is generally not reproduced in full form when a document is printed.

**MIGRATED DATA**: Information that has been moved from one database or format to another.

**MIRROR IMAGE**: Used in computer forensic investigations and some electronic disclosure investigations, a mirror image is an exact bit-by-bit copy of a computer hard drive that ensures the operating system is not altered during the forensic examination. May also be referred to as "disc mirroring", or as a “forensic copy” or "imaged copy”.

**MPEG (MOVING PICTURES EXPERT GROUP)**: An image compression standard for full motion video.

**NATIVE FORMAT**: An associated file structure for an electronic document defined by the original creating application. Viewing or searching documents in the native format may require the original application (for example, viewing a Microsoft Word document may require the Microsoft Word application).

**NETWORK**: A group of one or more computers and other devices connected together for the exchange and sharing of data and resources.

**OBJECTIVE CODING**: Coded information that can be derived from a document without any specific legal training. Normally comprises; Date, Estimated Date, Document Title, Document Type, From, To, Copyee. Objective coding is normally conducted by a vendor (often overseas to provide a cheaper service).

**OFF-LINE DATA**: The storage of electronic data outside the network in daily use that is only accessible through the off-line storage system.

**Optical Character Recognition (‘OCR’)**: means the computer-facilitated recognition of printed or written text characters in an Unsearchable Image

**OFF-LINE DATA**: The storage of electronic data outside the network in daily use that is only accessible through the off-line storage system.

**ON LINE DATA**: Electronic data stored on the network in daily use.

**PDF (PORTABLE DOCUMENT FORMAT)**: A common format for images of documents which enables documents to be displayed or printed in a manner which preserves the formatting originally used by the author. A PDF file may be either a Searchable Image file or an Unsearchable Image file.

**PETABYTE (PB)**: A petabyte is a measure of computer data storage capacity and equivalent to one quadrillion (1,000,000,000,000,000) bytes.

**PERSONAL DATA**: Information of a personal nature that must not be disclosed, such as medical records, salary, home addresses, relationship discussions, social security numbers, etc. Personal data is normally **REDACTED**.

**PREDICTIVE CODING**: Functionality that automatically codes records by conducting analysis on the ESI. The coding can encompass **OBJECTIVE** and **SUBJECTIVE CODING**.
Objective coding is usually a simpler process than the Subjective work which requires the software to be "seeded" with examples of relevant and/or Privilege documents. The application then "learns" what criteria it uses to arrive at the Subjective decisions and (once trained) will identify those documents and pass them to a user for confirmation on the coding calls. See also: **COMPUTER ASSISTED REVIEW REFERENCE MODEL (CARRM)**.

**PST (PERSONAL STORE):** The place where Microsoft Outlook stores its data (when Outlook is used without Microsoft Exchange Server). A PST file is created when a mail account is set up. Additional PST files can be created for backing up and archiving Outlook folders, messages, forms and files. The file extension given to PST files is .pst. Can be broken down into individual emails called .msg.

**RETENTION PERIOD:** The length of time a given records series must be kept, expressed as either a time period (e.g. four years), an event or action (e.g. audit), or a combination (e.g. six months after audit).

**REDACTION:** The process whereby sensitive information is hidden by rendering part of a document unreadable. It is sometimes referred to as 'Masking'. Redaction is typically used to render unreadable; confidential, privileged or personal data portions of an otherwise disclosable document.

**RESIDUAL DATA:** Data that is not active on a computer system (sometimes referred to as "Ambient Data"). Residual data includes (1) data found on media free space; (2) data found in file slack space; and (3) data within files that has functionally been deleted, in that it is not visible using the application with which the file was created, without use of undelete or special data recovery techniques.

**RESTORE:** To transfer data from a backup medium (such as tapes) to an on-line system, often for the purposes of recovery from a problem, failure, or disaster. Restoration of archival media is the transfer of data from an archival store to an on-line system for the purposes of processing (such as query, analysis, extraction or disposition of that data). Archival restoration of systems may require not only data restoration but also replication of the original hardware and software operating environment. Restoration of systems is often called "recovery".

**SAMPLING:** Usually (but not always) refers to the process of statistically testing a data set for the likelihood of relevant information. It can be a useful technique in addressing a number of issues relating to litigation, including decisions as to which repositories of data should be preserved and reviewed, and determinations of the validity and effectiveness of searches or other data extraction procedures. Sampling can be useful in providing information to the court about the relative cost burden versus benefit of requiring a party to review certain electronic records.

**SEARCHABLE IMAGE:** An ELECTRONIC IMAGE in which the text-based contents can be searched electronically.

**SEMANTIC ANALYSIS:** Method by which a number of products conduct clustering. Refers to the "automatic" identification of key words and concepts within a document so that there is a "spine" of a central concept, off which related groups of documents are clustered.

**SCANNING:** The process of converting a hard copy paper document into a digital image for use in a computer system. Often associated with the OCR process, as in "documents will be scanned and subject to an OCR process".

**SUBJECTIVE CODING:** Information held in a litigation support system about records (either paper or electronic). Subjective coding requires legal input and covers initial calls on Relevance, Privilege and Trade Secret as well as case specific issue and matter coding.
Annex A - Technical Glossary

**TECHNOLOGY ASSISTED REVIEW (TAR):** See: Computer Assisted Review (CAR) and Predictive Coding.

**TERABYTE (TB):** A measure of computer data storage capacity and equivalent to one trillion (1,000,000,000,000) bytes.

**TIF OR TIFF (TAGGED IMAGE FILE FORMAT):** One of the most widely supported file formats for storing bit-mapped images. Files in TIFF format often end with a .tiff extension. Other file formats include JPG and BMP.

**Unattached Document:** An Electronic Document without a Host Document.

**UNSEARCHABLE IMAGE:** An Electronic Image in which the text-based contents cannot be searched electronically.
ANNEX B – BLANK VENDOR FORM

The following form was distributed to all the vendors shown in the Guide. Should any organisation wish to be entered into future versions, please complete the document and submit it. There is no charge for inclusion in the Guide.

Company Description

Synoptic paragraph (or two) on the history of the company and its background, You might want to provide details on:

- When the company was founded, and its history.
- Size (both in personnel and financials) in the UK and overall.
- Focus of the organisation.
- Any particular individuals / specialisations you are known for.

But basically it's up to you. We will be trying to keep the Vendor pages to a relatively uniform size so reserve the right to trim your 14 page opus down to a few paragraphs.

Vendor Offerings

What services and software you provide. Mention software by name only, there is a separate section to describe it in detail. Don't want price lists or short term offers, this information will be in the document for at least a year. Don't just mention the software, explain (briefly) what you do with it in terms the layman can understand.

Sign off from organisation

Who in the organisation is providing the information and should be contacted over any issues. Will also be the person responsible for all text and factual content.

Software Information

Some software is owned and only provided by certain vendors, but other applications are used by a number of people, so we are splitting out the software into a separate section.

Again, please only about a page of information on each bit of software and what it does, less is good, but make sure you give enough detail so that users of the Guide can compare like with like. We reserve the right to take competing descriptions of the same application and use the one that seems to suits our needs best, but will show in the Guide all the vendors that supply that software.
